This is what I do. I have 8 radios. I take one out at a time and use it for like 2-3 weeks then switch off to another one. I haven't used my R-75 for like 5 weeks so I took it out like 4 days ago. This way it's like having a new radio to play with each time. Believe me you forget the "feel' of the radio after a couple weeks.

Like I haven't used my FRG-7 or FRG-7700 for a while now. But I have a soft spot in my heart for the 150. It's special and I feel great when I take it out. I may fire it up tonight. I like to break it out for the weekend. I hate when I get something nice and get used to it. This way it feels new every time I use it!

Lucky

Really! On Usenet? I thought he'd been gone for several years now. Well,
either way, we should refrain from using his name. Repeated use of it can
work like an incantation for summoning the minions of Hell...only they'd be
easier to get rid of than him.

Of course, they'd also have a better grasp of physics, and would be much better conversationalists.

Source record: 11220

MAKING MONEY I found this on a bulletin board and decided to try it. A little while back, I was browsing through newsgroups and came across an

article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $6.00! So I thought, "Yeah right, this must be a scam", but like most of us, I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 6

names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at

least 200 newsgroups. (There are thousands) No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured: "what have I got to lose except 6 stamps and $6.00, right?" Then I invested the measly $6.00. WellGUESS WHAT!!... Within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in. In my first week, I made about $25.00. By the end of the second week I had made a total of over $1,000.00! In the third week I had over

$10,000.00 and it's still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it's still coming in rapidly. It's certainly worth $6.00, and 6 stamps, I have spent more than that on the!! Let me tell you how this works and most importantly,

why it works.... Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy! Suggestion: Read this entire message carefully! (print it out or download it.) Follow the simple directions and watch the money come in!

It's easy. It's legal. And, your investment is only $6.00 (Plus postage) IMPORTANT: This is not a scam; it is not indecent; it is not illegal; and it is virtually no risk - it really works!!!! If all of the following instructions are adhered to, you will receive extraordinary dividends. PLEASE NOTE: Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions. You will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the

money made from the mailing lists is secondary to the income which is made from people like you and me asking to be included in that list. Here are the 4 easy steps to success: STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the

U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal! Mail the 6 envelopes to the following addresses: #1)Dan Warner 2812
W. 1st. St. Duluth, MN 55806 #2) Karen Green 50 Gillinder Street Rockhampton Qld Australia 4700 #3) Ryan Lake 41130 Congerbay Dr Harrison Twp, MI 48045 #4) Zac Inchley unit 82/ 128 Benowa rd Southport

Qld Australia 4215 #5) Carl Baker 2267 N. Kedzie 1st floor Chicago, Illinois 60647 #6) Jason Otto 600 s. 1st st. Waterford, WI 53185
STEP 2: Now take the #1 name off the list that you see
above, move the other names up (6 becomes 5, 5 becomes 4, etc.) and add

YOUR Name as number 6 on the list. STEP 3: Change anything you need to,

but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 24,000 groups) All you need is 200, but remember, the more

you post, the more money you make! This is perfectly legal! If you have

any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal laws. Keep

a copy of these steps for yourself and, whenever you need money, you can use it again, and again. NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the

notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.) So, as each post is downloaded

and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches

the #1 position you will be receiving thousands of dollars in CASH!!! What an opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you're in business! ---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS---------- Step 1) You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning

of this letter and drag your cursor to the bottom of this document, and

select 'copy' from the edit menu. This will copy the entire letter into

the computer's memory. Step 2) Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This will paste a copy of the letter into notepad so that you can add your name to the list. Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you'll always have this file to go back to. Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.) Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in

the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You're done with your first one!
Congratulations...THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup! **REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200** That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to

the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT. ** Now the WHY part: Out of 200 postings, say I receive only 5 replies (a verylow example). So then I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of

the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2

and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625,00! With an original investment of only $6.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is: do you realize that thousands of people all over the world are joining the internet and reading these articles everyday?, JUST LIKE YOU are now!! So, can you afford $6.00 and see if it really works?? I think so... People have said, "what if the plan is played out and no one sends you the money? So what! What

are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups

everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual

internet. Remember, play FAIRLY and HONESTLY PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at

it this way. If you are of integrity, the program will continue and the

money that so many others have received will come your way

Yeah, and $10,000 for a ceramic insulator. ;)

DOD will buy anything for 100x its worth. It must be nice to run
Halliburton. Overcharge for everything (including gas) and let little
people from out in the sticks get blown up by the Iraqis while you sit
in an office in Texas and watch your net worth go straight up.

Since the antenna is physically small it will not be very efficient and
so it appears to be an amplified antenna according to its descriptor.
The amplifier must be in the base. The design is non directional and it
looks like it is supposed to be bolted to some vehicle.

Since I went to the Wellbrook loop, my ANC-4 doesn't seem to cancel noise as well as it did when I had a long wire and a balun. I sure hope the answer isn't another Wellbrook as the noise antenna into the ANC-4.

< Snip >

Hi trip. I bought this news group years ago to make easy money and it
has been a great investment. You see anyone that advertises in the news
group owes me $5.00 for each occurrence. When will I see a check from
you?

PLEASE NOTE: If you want to keep advertising here I can provide a
discount rate on a 1 year contract. If you were to advertise in the news
group once a week that would cost you $260 a year. With a one year
contract I offer a 50% discount. We are talking just $130 for a one
advert a week for a year! You will not find a better price anywhere but
you have to act fast as this discount is only good until March 15 so
don't delay.

PLEASE NOTE #2: Just in case you get tired of news group owners hitting
you up for advertising fees I can show you how buy your own news group.
Stop being a renter of posting space and start being an owner. I can
show you how to finance the purchase of a Usenet news group and start
making money the very first month! With a wide range of prices depending
on posting volume I know I can make a deal that's right for you!

Shawn,

There is a lot of enthusiasm about the 1103 and it has a lot going for it. But I find myself hardly ever using it because of the volume control design.
It has no dedicated volume control. You must engage the volume control button, then adjust the tuning knob to move volume up/down and then wait for the volume control process to stop - only then can you use the tuning knob again for tuning.

To me it is very awkward and takes the fun out of using the radio. I am not a fan of the fake analog display either. Because I find the design frustrating, it gets little use.

I appear to be in the minority as there is a lot of positive feedback on the radio. I think for program listening, where you set the volume and forget it...it would be okay. It's too bad they didn't give it a dedicated volume control. By the way, the 1102 has up/down volume buttons.

I did a review at radiointel.com if you want some more detail.

Of the loving Israelis:

http://www.ussliberty.org/

"Menachem Begin
He was responsible for the bombing of Jerusalem's King David Hotel, at that time a British administrative and military headquarters, that killed 91 people."
http://en.wikipedia.org/wiki/Menachem_Begin

"Yitzhak Shamir
After Stern was killed by the British in 1942, Shamir escaped from the detention camp and became one of the three leaders of the group in 1943, reforming it as "Lehi". During his tenure, the Lehi was responsible for many deeds, including the 1944 assassination of Britain's minister of state for the Middle East, Lord Moyne, and the 1948 assassination of the United Nations representative in the Middle East, Count Folke Bernadotte."
http://en.wikipedia.org/wiki/Yitzhak_Shamir

Ariel Sharon
"The present Israeli Prime Minister, Ariel Sharon, has long been involved in terror. In 1983, he was found indirectly, but personally, responsible for a civilian massacre by Lebanese militia in two Palestinian refugee camps. At least 800 innocent men, women and children were murdered in cold blood, most of them Palestinians, after Sharon ordered his men to allow the militiamen access to the camps.

....which between 460 and 3500 Palestinian civilians in the refugee camps were killed."
http://en.wikipedia.org/wiki/Ariel_Sharon

For some reason, when U.S. Allies are involved, it's freedom fighting, when anyone else does the same thing, it's terror.

Go Figure.

"Judge not, that ye be not judged.

For with what judgment ye judge, ye shall be judged: and with what measure ye mete, it shall be measured to you again.

And why beholdest thou the mote that is in thy brother's eye, but considerest not the beam that is in thine own eye?

Or how wilt thou say to thy brother, Let me pull out the mote out of thine eye; and, behold, a beam is in thine own eye?

Thou hypocrite, first cast out the beam out of thine own eye; and then
shalt thou see clearly to cast out the mote out of thy brother's eye.

Matt 7:1-6

Good point on shielding the router. Metals boxes and wire mesh for ventilation are easy to come by.

If I have gear to near to the computer, I can hear a click every two seconds or so, which I suspect is due to polling on the router, or communications between the router and the print server.

I have one of those "zap checkers" which indicates RF is being emitted, though it does not indicate the frequency of the signal. I've seen RF on the cat5, but haven't bothered to check the boxes.

When doing AMDX with my Icom R-75, I use the 110' longwire. More
stations, but more noise, too. The longest distance catches I've made
in AMDX have been with the Icom (Cuba, Mexico, etc.)

When using the GE Superadio III, and the "Select-A-Tenna", I get less
distance (to split hairs) but quieter reception (ability to rotate
antenna and tuner).

Sometimes you feel like a nut, sometimes you don't!

Tony

So she says. So based on the Italian reporters story you are fully convinced she is telling the truth and there was no signal given for them to stop. So just what makes a communist reporter's word, who is a journalist for a commie newspaper, more believable than the U.S. soldier's? You stand by your commie reporter, I will stand by the U.S. toops.

Yep, I am sure she is thinking up pleanty more lies in an attempt to cover up her and the Itallian agent's stupidity for not stopping, and attempt to put our troops in as bad a light as possible.

Greg

I use

Indoor antenna : Quantum QX Loop
Outdoor antennas: Wellbrook K9AY & Wellbrook ALA 1530

I also have a Quantum Phaser that I go with on the 2 outside antennas
when I am on a Freq that I want to try for a "new one" .

IMHO the K9AY is the best you can do for a very small space. around a 30
ft square is all that is required. One center support around 26 feet
tall. Fiberglass mast.

So for who are these signals intended?

The signal was quite strong, so you are probably correct. When you don't know exactly how to monitor a signal, it is tough to nail the frequency exactly. Do you know the mark/space frequencies?

And earlier the stupid commie reporter also said that the soldiers did make any signals to stop, there were no lights, yet from your same article, "the Italian magistrate Franco Ionta said Sgrena reported the incident was not at a checkpoint, but rather the shots came from "a patrol that shot as soon as they lit us up with a spotlight."

The stupid Italians can't even keep their stories straight.

It still is a clear channel. However, they have not been able to rebuiled
the fallen tower and are still using the aux, but with hihger power than the
first few hours.
>
> Did they reduce power after putting up a new antenna?

The 1/8 wave antenna was the auxiliary tower, used when the 1/2 wave one was
being maintained. There has been no replacement or new tower built.

It changed when KFI's main tower was knocked down by an airplane
earlier this year. The incident was widely reported at the time.

If anybody wants to read about KFI, there's a big cover story article
about inside the talk radio biz in the new (April 2005) issue of
Atlantic Monthly, featuring the nightime guy there.

Trivia, KFI originally stood for "Farm Information".

They lost the tower in an aircraft collision. They are running an existing
auxiliary tower in a nonconforming operation until such time as the
half-waver can be rebuilt at the current site or a new site found.

Why don't you two get a room at the Dinosaur Hideaway?

KFI is not KMPC. It is a WOAI clone. It is annoying to listen to.
It is classless. The only reason they're #1 is the rest of the
audience is too fragmented.

For good sounding News/Talker try 810.

Interesting thing about those Collins filters.....I know
that about a year ago, you could buy them direct from Rockwell Filter
Products, Costa Mesa, Ca for just under 90 dollars, shipped. Some of the
radio manufacturers were selling them for upwards of 120 dollars.

Well yes, but then generally the lower frequencies suffer. Unfortunately, during the summer when the lower frequencies actually propagate a bit better we are then plagued by thunderstorm static.

Can't win!

Do you have a DSP unit (either built-in or external)?

If so, what percentage of the time to you have it switched on?

Do you use it for AM reception or do you use it only on SSB and other,
more 'specialized' modes?

What's the main thing you like/dislike about your DSP?

Steve

KTAR does really well with a 440' tower. KFI may have to make do with
something similar.

Hmmm...now I wonder what this is.
Could it be a chain letter?
Possibly a pyramid scam?
Maybe it's a get rich quick scheme for those first in line...like
jotto. And do you suppose it might be illegal in at least one
jurisdiction?

I know the answer...I know...!!!
It's all of the above.

1781. Re: DSP survey

Newsgroup: rec.radio.shortwave
Date: 2005-03-11 15:47:14 UTC
From: r2000swler@hotmail.com
Message-ID: <1110556034.339803.100790@z14g2000cwz.googlegroups.com>
Source record: 11319

I have used a Radio Shack DSP40 for the last 5 years.
It is usefull under bad band conditions and can really
clean up hetrodyne. In the CW mode it allows one
CW singal to be "extracted".
The downside is it "muffles" decent audio, in fact I get
a headache if I use it too much. Maybe 15 to 30 minutes
max.
I have just traded for a PCR1000 that has the added
internal DSP. It works but not as completly as the DSP40.
But it mangles the audio less and does a fairly good job.
I haven't used the PCR1000 on HF that much, it overloads
very easily. The DSP module does mak eth PCR1000 run
about 20C hotter. Hot enough so I added aslowpeed 12V
muffin fan to cool the case. The fan is congtroled by the
DCT or CTS, whichever RS232C line the PCR100 asserts
when active. Would I buy a PCR1000 new, or pay the
addtional ~100+$ for the DSP, no way. It was part of a trade
and I plan to use it for local "emergencies", like the winter storm
that is supposed to hit us this evening. I plan on buildng different
frequency list to dump in and use it more as a VHF scanner then
anything else. Even for this use the PCR1000 is awkward
requiring a PC or palm pilot. I also got a Pro2067 that may be
better suited to my plans.

McKay Dymek DA-5 BCB ferrite loop antenna.
Modified, like all my equipment, to operate frrom
a common +12V, very quite!, Lamda DC supply.
Works great.
The original power supply does produce some very
low level "hash", which is almost always covered by
the local RF noise .

I have a 100Base-T hub and I found that by putting
ferrite cores on EVERY line, power and data, really
quitens things down. The ferrite will stop, or reduce,
common mode emmisions which is the main noise
source. The CAT5 cables are twisted and are
transmission lines with differential RF, and don't
radiate as much, in that mode, as commonly thought.
I am also a ham, and while I don't transmit very often,
I found that my IC28 would cause the router to lock up.
The ferrite split cores stopped that problem as well.

The main difference is in the IF strip. The 2515 uses 4 of the filters in the IF while the "A" only uses 2. I believe one stage IF amp stage was dropped in the "A" model as well. Another minor difference is in the RF amp. In the 2515 the bias on gate 2 of the dual gate MOSFET is fixed with a voltage divider, while in the "A" a variable resistor is added into the network, so as to be able to vary the bias over a small range.
I remember using the 2515 as a SWL rx back in the late 60's and finding the 4 IF filters to be too much selectivity for AM broadcasts, and not quite enough for CW/SSB. The "A" model having fewer cans fared better with AM.
Those cans were a mystery as well. I don't think they were Toko products but I don't know for sure. I opened one up once and found what appears to be a ceramic filter disk and an unusual arrangement of coils.

These radio were sold by Allied Radio. I have not been able to determine who actually made them. I once corresponded with a Trio employee who worked there about the time these units were being sold, and he swore they were not one of theirs.

What a horrid, miserable radio. I owned one brand new in 1971 as ordered from Allied radio shortly before their demise.

The A-model has a bit more IF bandwidth due to one IF filter stage being eliminated and replaced with a jumper wire on the circuit board. This spoke volumes of the crappy design: imagine, the "improved" A-version actually has less parts due to the fact that an entire stage in the IF was removed!

My 2515 model suffered from excessive drift, instability, bandswitch glitching, microphonics, poor sensitivity above 20Megs, scratchy pots.....and that was when the darned thing was NEW!

The A-model may be more desirable due to its selectivity being wider than that of a razor blade. AM on my 2515 was absolutely miserable and devoid of any detected audio above 1,500cps. It always sounded like you were listening to a radio with a paper bag over your head.

No wonder Allied fizzled. This was the Company's last, dying attempt at marketing a house-brand "communications" receiver. I can see why anyone at TRIO would never admit to desingning the fool thing.

>So for who are these signals intended?

Most of my books are 15-20 years old, so they may be a bit out of date.

In _Nuclear Battlefields_ by Arkin and Fieldhouse, a book on the
infrastructures for nuclear war from 1985, they say that they're used
for communications with submarines. That book says there are four
transmitter sites in the Pacific, (Northwest Cape, Australia,
Yosami, Japan, Jim Creek, Washington, and Wahiawa, Hawaii).

>The signal was quite strong, so you are probably correct. When you
>don't know exactly how to monitor a signal, it is tough to nail the
>frequency exactly.

I cheated. That is out of a Grove book, their _Shortwave Directory_
dated 1988, out of a longwave logging list credited to the LWCA
(Long Wave Club of America?). They also list stations in Maine and
Puerto Rico. But if you know your BFO offset, you can get a good idea
if you zero beat, or otherwise measure the frequency, like with a 0'scope.

>Do you know the mark/space frequencies?

It's MSK, Minimal Shift Keying(?). It's a very narrow shift, related
to the baud rate. Even then, they have to switch the antenna tuner in
sync with the modulation, according to some ham friends who got a tour
of the place many years ago. (They date from the 1950's or eary 1960's).

They could do the 50 kw into the 1/8th wave tower, but it was built as an auxiliary tower and the ATU will not take 50 kw. Since the metro coverage is satisfactory with 25 kw, and metro coverage is all they care about, it is unlikely they will "fix" the small tower until they get the 1/2 wave tower back in operation. In fact, they had their best book ever after the tower fell and they were on lower power on a less efficient tower.

I don't think it's unique to Allied. At that same period, a lot of
the old US companies and manufacturers went to solid state and Japan
for their receivers. The art hadn't developed much, and people wanted
cheap receivers. So you got a lot of junk, and in many cases it
wasn't made by the company, merely labelled with the company name.
I've heard it said that the companies were unable or unwilling to adapt
to solid state at the time, so rather than invest the needed research
and energy in solid state design, it was farmed out.

Virtually everyone had a low end solid state receiver at the time of
dubious quality. Something like the Hallicrafters S-38 was pretty bad,
but it was built with tubes and at least the designers knew tubes well.
It took more effort to make a good solid state receiver, and that wasn't
happening at the time, at least not at the low end.

My Hallicrafter's S-120A was horrible. I suspect that Ameco cheap
transistor receiver that tuned to 54MHz was likewise not very good, though
that's just a guess based on time an price. Lafayette, Radio Shack, probably
even Heathkit had similar receivers.

Of course, I'm less certain that such equipment killed the companies. I
suspect they were at the end of their long runs, and the fact that things
were changing and they didn't change with it helped.

QST de W1AW
Propagation Forecast Bulletin 10 ARLP010
>From Tad Cook, K7RA
Seattle, WA March 11, 2005
To all radio amateurs

SB PROP ARL ARLP010
ARLP010 Propagation de K7RA

The sun was quiet this week, but a new chain of sunspots is rotating into a geo-effective position. There were some active days for geomagnetic conditions, most pronounced on March 6-8, and due to a solar wind stream. The average daily planetary A index rose less than 11 points to 20.1, and the average mid latitude A index rose less than 6 points to 12.3. Average daily sunspot numbers were up over 21 points to 36.1, and average daily solar flux rose less than 10 points to 85.9

Rising solar flux and increasing sunspots are expected over the next week. Solar flux should peak around March 15-16 near 115, then drop below 100 around March 20. The most active predicted geomagnetic day in the near term is March 14, but conditions should be merely unsettled, rather than stormy.

Enjoy the next few weeks. The period around the equinox, the change from winter to spring is a good time for HF propagation, even with the sunspot count so low.

With a cry of "Say it isn't so!" Vince Varnas, W7FA of Aloha, Oregon sent an article claiming that the next solar cycle, set to begin in a few years, may turn out to have the weakest maximum of any cycle in the past 100 years. He sent the article as an attachment, but I found it online at, http://solar.uleth.ca/news/05Mar2005/index.php. If that link is troublesome, try a cached version at http://tinyurl.com/4j8cw.

Let's hope the next one, Cycle 24, proves this forecasting method wrong. We don't see many solar cycles in our lifetimes, not to mention our time as amateur radio operators. I was lucky to start early at age 12, 40 years ago this month, and am in my 4th solar cycle. I was just young enough to have missed cycle 19, the grandest of them all, which peaked after the middle of the last century in the late 1950s.

Alex Mendelsohn, AI2Q of Kennebunk, Maine sent in a link to an interesting article from the Air Force Research Laboratory magazine

about an all-sky imager that detects solar plasma clouds. You can read it at http://www.afrlhorizons.com/Briefs/Dec04/VS0402.html. Even better, check out Alex's own radio room and some very impressive homebrew projects on his personal web site at http://users.adelphia.net/~alexmm/ai2q.htm.

If you would like to comment or have a tip, email the author at, k7ra@arrl.net.

For more information concerning radio propagation and an explanation of the numbers used in this bulletin see the ARRL Technical Information Service propagation page at, http://www.arrl.org/tis/info/propagation.html.

Sunspot numbers for March 3 through 9 were 24, 13, 22, 22, 43, 52 and 77 with a mean of 36.1. 10.7 cm flux was 77, 78.9, 81.2, 83.6, 87, 93.5 and 99.9, with a mean of 85.9. Estimated planetary A indices were 4, 3, 10, 36, 42, 26 and 20 with a mean of 20.1. Estimated mid-latitude A indices were 2, 1, 8, 17, 28, 17 and 13, with a mean of 12.3.

He's an antisemite who knowingly spreads false information. Suggesting this is about free speech and debate is like suggesting yelling "fire" in a non-burning theatre is also free speech. There are limits and this criminal has crossed them. Thank God there are a laws about his sort of behavior and that they are occasionally enforced.

Author/source:SW Radio Africa
Fri 11-Mar-2005

We are still being deliberately jammed - which obviously means that we're doing a good job! Please bear with us while we try to overcome this problem. We're now on Plan B.

For the full three hours of evening broadcasts we will be on 3230Khz in the 75 metre band.

For the first hour of evening broadcasts we will also be on 6145Khz in the 49 metre band.

Don't forget the short-wave and medium-wave broadcasts between 5 am and 7 am Zimbabwe time each the morning. These are the frequencies to try:

Medium wave: 1197Khz

Shortwave: 3230Khz in the 75 metre band

And 24 hours a day on www.swradioafrica.com

http://www.zwnews.com/issuefull.cfm?ArticleID=11427

1804. Norwegian Amateur Stations Gain Access to 5MHz Frequencies

Newsgroup: rec.radio.shortwave
Date: 2005-03-11 20:15:27 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <d0su8vqqa1@nwrdmz03.dmz.ncs.ea.ibs-infra.bt.com>
Source record: 11342

The Norwegian Post and Telecommunications Authority has granted permission to Norwegian amateur radio club stations to operate on eight 5MHz-band spot frequencies from 1 April 2005 until 31 December 2007. The permitted modes are upper sideband and CW, with a maximum transmitter power of 100 watts. The centre frequencies of the channels are: 5280, 5290, 5332, 5348, 5368, 5373, 5400 and 5405kHz, with the upper sideband 'dial frequency' being 1.5kHz lower in each case.

The permission has been granted on a non-interference-basis. Thanks to the NRRL HF Traffic Manager, Tom Segalstad, LA4LN, for this news story.

Those filters were pretty awful.....I don't remember the name of the company name, but it started with the letter K.
They were used in the NRD-515 and in the Yaesu FRDX-400. They were filled with some sort of foam substance that turns to a sticky jelly after many years, causing the insertion loss of the filter to degrade. Peter Bertini had an article in Popular Communications a few years ago on how to repair them. I did just that for a friend's FRDX-400. You have to dismantle the filter and clean out all of the goo with alcohol.....I used a product called Flux-Off.
Afterwards, you have to replace the foam damping material. I used air conditioner foam strip. Another thing about those filters....there is no other mechanical support for the filter elements themselves. When you remove the goo, you have the filter structure hanging by a few strands of Litz wire. For years, I was looking for an NRD-515 until I discovered those filter problems. I have never seen a Collins mechanical filter fail in that manner, and I have had quite a few of those filters over the years. If any of you ever have the problem with your JRC radios that use that filter, I can give you advice on how to repair them.....if you don't feel comfortable repairing them yourself, I can repair them for you.
I did have one of those 2515 in for repair a couple of years ago, and the unit that I repaired did not have any mechanical filters even though the advertising hype stated that it did. It was definitely one of those slightly oblong I.F. transformers that had the ceramic filter inside the same structure.
For a cheap receiver, they weren't bad.
Anybody remember the transceiver that matched this unit in style? A friend once told me that it was a Kenwood TS-510 with Allied's label.

Pete

Interesting. Of course, the routers and NICs are supposed to use RF chokes on the +VDC and GND lines to suppress common-mode EMI. If this leaves some room to be desired (there are no real rules governing how much RF choking should be done), and you are really using CAT5 (i.e., not CAT5E) rated cable and ends, this might explain the interference you were picking up.

The ferrite beads will not stop the EMI at the frequencies that data is running down the wire at. As you say, the twisted pairs wouldn't radiate much.

Common-mode will still be a problem, and ferrite should choke that out.

CAT5 (not CAT5E) has much lesser near-end x-talk protection, and I recall that it can emit EMI spikes at specific frequencies. This might be what you are hearing. CAT5E does not have this problem, I understand.

See if the cable and routers are rated CAT5E. It might be worth the expense to try it out on one data line to see if the noise is minimized. Heck, it might be worth it to pull most of the cables and see if the router makes similar noise. The noise may not be network traffic related. Or power down the router but leave the nodes connected.

Also, another reply to this thread mentions that ferrite material did choke out common-mode RF. It may help, especially if the router has less than stellar RF choking on it's ethernet +VDC and GND lines.

If the router is the noisiest part, then my advice about making sure the connectors are all in good shape still holds. I bet you could snap a ferrite bead on the power supply/wall wart powering the router, too.

I'm still pretty sure that the twisted-pair lengths themselves are minimal EMI radiators (or the radiation falls off sharply over distance), but the ends can still radiate quite a bit, and common-mode EMI is always a problem. Like most things radio all this is half-science and half-magic. If it works for you, then it works!

Not the greatest reception. Running about S5-S7
in Cincy, sounding like psychadelic music.

Satellit 800
50' long wire
9:1 transformer

I'm hearing it at 2216 on 6925 in Austin, TX. Some dude keeps saying
"This is Jack Black, WKIL, Killer Radio" or something like that. Signal
was an s9 but starting to fade.

Yeah, I caught what seemed to be the Jack Black part... can't tell whether it's
WKIM, WKIN or WKIL...

Got some freaky snow squalls moving through here with some apparent lightening
as well.

Yep... WKIL ID at 2224.... "Kill all the mother f**kers"

Well, I finally got in my new receiver. I just couldn't resist full computer control, figuring it would be the most accessible since I'm blind and good with computers.

I've only had it for about a day, but I'm fairly happy with it so far. The band is not all that good, but it seems to be working fairly well. I was quite surprised to get more buttons on the screen (at least things my speech can see) with a higher screen resolution. I couldn't have imagined this kind of access when I was really into shortwave 20 years ago.

Only problem I've noticed is that the receiver was just slightly out of adjustment, it was about 60hz off. Nice thing is that with the software I fixed it in a matter of minutes by tuning in wwv and trying adjustments until I got it spot on. This is the first radio I've ever had with usb and lsb, instead of just a bfo switch. That combined with decent filters does definitely help.

Sad to hear that Flanders Today will be gone at the end of the month on RBI (11.730 booming in here).

Somebody needs to come up with a webpage or program to put all the international programs in one place, I don't find that sort of listening to be at all easy.

There is no excuse for a penny pinching move like that in an expensive radio. My opinion of Japan Radio just went down a couple of notches.

Me too. RVI is my first ever QSL. 11730 really comes in strong for me
with a little wire hanging out the door. I was hooked on the first
listening, right up to where they said they were going away.

> Somebody needs to come up with a webpage or program to put all the
> international programs in one place, I don't find that sort of
> listening to be at all easy.
Right. A page that can be properly read by a screen-reader. This is
the big advantage of using standards-compliant content with style-sheets.

I'm guessing you'd like an electronic, searchable version of the
Passport to Worldband's "English-language broadcasts" pages?

It's easy to do this. The hard part is keeping it up-to-date. Well, I
guess the data entry would be a pain, too.

I've though of a similar type of system, with the added bonus of being
able to rate or tag entries so I can get a result set that answers the
question, "what English language broadcast are on right now that I think
would be coming in nicely at this hour where I am?"

At 2251 its still s8 - s9 here in Austin with little QRN or no QRM and the guy definitely says WKIL with either a some cheap effects on his voice or re-playing his voice slowed down a bit. Cool music though.

Heard with Yaesu FRG-7 and a 75' wire with a tuner.

At 22:49Z I have a strong, S9 and steady, AM
carrier, with farily low modulaiton. But there is
a lot of static that sounds like lightening.
Lightening in March?
Located just south of Lexington KY.
Music being played is blues and it sounds like BB King.

If you are in the market to buy some hardware-based DSP, you may
consider
downloading one of the free software-based DSP programs to experience
what
it can do. Google "SR5-DSP" and try that. There are others out there as

well...

Good luck with it!

-=jd=-

I've read about various software-based DSP programs and some of them look really interesting. However, I don't care to have my receiver connected to a computer. I did operate this way for a while and I appreciate the advantages, but on the whole I don't care for it.

I use one of the ClearSpeech units and am very happy with it, but I've noticed that some people are much happier with DSP than others. I'm curious about whether this is because DSP is just better adapted to certain kinds of listening or whether it's entirely a matter of personal preference. Anyway, my curiosity about this is one of the things that motivated me to start this thread.

How much are Kaito radios,about forty or fifty dollars? That would probally be a good radio to take to Europe or wherever with you.Chances are that if you have something nice and expensive in your luggage at the airport(s) the item or items might get stolen by some crooked baggage handlers.If you take a nice expensive radio with you it probally would be best to hang on to it with your hands at all times.Don't let it out of your sight no more than you would with a wristwatch or jewelry that cost hundreds or thousands of dollars.

China & N. Korea launch harsh crackdowns

China arrests more than 800,000 people for endangering state security

�State Security� arrests top 800,000 in 2004, and show no signs of slowing down: The number of people arrested by the Communists for �endangering state security� (Asia News) � the cadres� catch-all crime for doing anything of which they do not approve � was 811,102 last year.

http://www.asianews.it/view.php?l=en&art=2731

2005 is promising to be another busy year for the brutal dictatorship � over 2,000 �appellants,� i.e., petitioners bringing their grievances against local cadres back home to Beijing � have been arrested

Since convening China�s top advisory board, the National Committee of Chinese People�s Political Consultative Conference on March 3, the police presence on the streets of Beijing has multiplied, with police vehicles running in every direction.

The amount of public security this year is staggering, and seems to suggest a growing fear coming from the Chinese government. Preceding the two conferences, police, public security, national security, armed police, plainclothes police and urban riot police filled the main streets and small alleys of Beijing, overflowing into the surrounding areas. Many of the police are from provinces, cities and autonomous regions sent to �defend the two conferences.� The government is using more than 600,000 state personnel to �protect� the several thousand officials attending the conferences.

"Li Changchun" <LiChangchun@ccp.gov.cn> wrote in
news:1134bpq5pbda35b@corp.supernews.com:

Nowhere is my post endorsing Islamic States. You have engaged in the same subterfuge so common to someone incapable of addressing the facts, i.e. say something irrelevant to the point.

Did you peruse the information at the listed links, or merely judge them as untrue as they don't support your view on life? Wrong is wrong, regardless of who perpetrates it. The Israelis were wrong in the cited examples. The Arabs are wrong in the continuing acts of terrorism.

Nothing is going to change in world politics if we continue to focus on specific groups and exonerate other groups of the same crimes. Have you ever watched movies (I'm sure that you have). At least the movies produced in America have stereotypical villains. Republicans, Germans, Christians, Arabs, and Caucasians. That's about the extent. Movie after movie inculcating the public that people from these groups are not to be trusted.

All men are stupid, all women are single (or single mothers),and all Arabs are crazy machinegun toting maniacs. How is this going to help anything?

And you, I see that you are with the "Chinese Communist Party". How exactly do you enter the fray of the discussion? History has rightly condemned the acts of the Nazis during WWII, but has been stifled on the cases that I cited. People should have free access to the facts and be able to come to their own conclusions, not have them forced on them by politically correct mores.

Regards

Dr. Artaud

P.S., are you involved in shortwave and are you from China? (This may be self evident to others on the group, pardon me if this is something that I should have noticed from other posts). Do you know the times in UTC and frequencies for English Language shows from China?

hjsjms@cs.com wrote in news:1110585776.455499.319650
@g14g2000cwa.googlegroups.com:

Assuming that your post is not facetious, a little etymology is in order.
Neo, used as a prefix, means "New". Thus, when you discover that your
contact lens fits too tight, and you have been careless for too long,
your cornea will develop Neo-vascularization. This means new vascular
growth in the cornea. (considering that you shouldn't have any
vascularization in your cornea, this isn't good news).

From the online dictionary:

"Main Entry: ne-
Variant(s): or neo-
Function: combining form
Etymology: Greek, from neos new -- more at NEW
1 a : new : recent <Neogene> b : new and different period or form of
<Neoplatonism> : in a new and different form or manner <Neoplatonic> c :
New World <Neotropical> d : new and abnormal <neoplasm>

Oddly enough, look at the meaning of the word Vascularization:

http://www.m-w.com/cgi-bin/dictionary?
book=Dictionary&va=vascularization&x=9&y=14

"Main Entry: vas&#65533;cu&#65533;lar&#65533;i&#65533;za&#65533;tion
Pronunciation: "vas-ky&-l&-r&-'zA-sh&n
Function: noun
: the process of becoming vascular; also : abnormal or excessive
formation of blood vessels (as in the retina or on the cornea)"

What a coincidence, I didn't plan the juxtaposition of the two words, it
just worked out that way.

Go Figure.

Anyway, if your post was facetious, oh well. Perhaps others can learn.
(The true meaning behind Neo).

Regards

Dr. Artaud

Hmm, never heard this before about the 515 filters. My almost 25 year old 515 works great, just needs a little alignment in the PBT circuit. A friend's 20 year old one is fine and dandy too..

Kinda depends on how you define radio station.

Lee de Forrest claims to have been broadcasting on a regular basis in 1907 from laboratory in Parker Building in New York.

In 1909 Charles Herrold transmits voice from San Jose. By 1912 he was maintaing a regular scheduled broadcast. In 1916 he was assigned the call 6XE which was changed to KQW in 1921 later to become KCBS.

1910 - De Forest makes a broadcast directly to the public from the Metropolitian Opera to listners in NY using a 500 watt transmitter.

1912. 9YV (WTG) Manhattan KS broadcasts weather information in Morse code daily at 9 a.m., believed to be first regular schedule of weather broadcasts in U. S.

1920 - 8MK (WBL, WWJ) begins formal period of testing (but Archer in History of Radio to 1926 says 8MK Radio News & Music Co. first appears in RSB 6/30/21; 8CS owned by an employee of the Detroit News first in RSB 6/30/21)

October of 1920 Westinghouse, Pittsburg, PA, obtains the call letters KDKA and broadcast the presidential elections on the night of November 2. Some historians want to make this the first commercial broadcasting station and the beginning of commercial broadcasting to the public, but that is up for debate.

The above is just a sampling of radio broadcasing go on in the early 1900's. You might find the following an interesting read.

TSA (US airport security) checkers are poorly trained and vetted and regularly help themselves to items in passengers' bags. Since Arnie is a Canadian and he's going to Europe, he won't have to worry about the TSA, but I don't know anything about security in Europe. Some countries are probably better than others. Most Degen (Kaito) radios are $50 or so when bought from Liypn over ebay, but I read on this group that Canadian customs are confiscating all Degens sent from HK to Canada because Kaito Canada complained that they were being undercut by Liypn. Still, at Kaito's price ($100 in the US, probably a little more up north) it's a radio that you don't have to fret over being grabbed by your friendly local screener. I've heard that Sony products of all kinds are regularly grabbed by TSA screeners, but most of them probably aren't smart enough to have heard of Kaito, much less Degen. Other inexpensive Chinese radios are a good bet to survive security. Arnie might try a Tecsun bought over ebay, they don't have the same import restrictions and are just about as expensive as Degen brand radios.

Arnie's a Canadian, and I don't think that talking with people on a
usenet group counts as "knowing" them. As for two way radios, it would
probably be easier for Arnie to buy PMR radios when he gets to Europe
than to buy them online from a European dealer.

The cheapest SW radios you can find are on ebay. If you have $50
invested in a radio, you won't worry about security helping themselves
to it. Try buying a Tecsun radio, Degens can't be sold to Canadian
customers online because of import restrictions on the part of the
Canadian government. Keep batteries in the radio, keep it in carry on
luggage (many of the Tecsuns are small enough to put in your carry on
bag) and be ready to turn it on and demonstrate that it works to get
past security. Artaud says that FRS radios are illegal in Europe, I
would definitely check into that before going. You may wish to buy
European compatible two ways online or if you can't do that buy them
when you get to the Continent.

FYI: Allied made "Knight" tube radios during their heyday in the 1940s.
I believe the company is still around as Allied Signal; I think they
make Autolite brand spark plugs among other car parts.

By 1971 I suspect that most of the old companies were simply names to be rented out, much like today. Most of the actual manufacturing was done in Japan, Taiwan and Hong Kong by companies that dared not use their actual Asian names on their equipment. That's why so many of the Japanese companies used non Japanese sounding names on their stuff-the memories of Pearl Harbor were still very fresh at that time, and Americans didn't want to admit that Japan was kicking their asses on consumer electronics. I suspect that the main selling point of the name "Sony" was that is didn't sound like Tokyo Tsushin Kogyo. Same thing with "Panasonic", which is still made by Matsushita. (Can you imagine the average American trying to pronounce "Matsushita"? Apparently the suits in Tokyo saw that coming and used the name National at first, then Panasonic.)

Horrible quality wasn't a detriment when you were talking about a small, four transistor MW only radio, but once SW got popular in the 60s and the Japanese moved into that field the lack of design and quality really became apparent.

On a side note, I heard on World News Tonight that there's virtually NO manufacturing left in America anymore. All the jobs have gone to China. Americans are using debt to prop up their purchase of Chinese stuff. I wonder what will happen when that ends. China and the US need each other-we buy their stuff, and they use our dollars to prop up Bush's spending spree. So basically the two governments are using massive debt to prop each other up, and eventually the whole house of cards will collapse. The Chinese are happy now, but support for the CCP is weak and once the world stops buying their industrial output the commies will REALLY be in trouble.

When I travlel to Europe, I take my Sony ICF-SW55 and but also the Sony AN-LP1 active antenna. That antenna make a world of difference in a hotel room. The radio performs much better with the AN-LP1 than on it's own whip.

Steve:
I have two all DSP receivers (RX-320 and RX-350) and I use a Timewave
DSP-599zx with my non-dsp receivers. I also use a software program called
SR5 and it works very well. In addition, Noel Bouchard sells a receiver
control program called RXPlus that works on many popular rigs and uses your
soundcard DSP for audio processing and decoding of RTTY,FAX, PSK31, etc.
This is a terrific program, see : http://www.cam.org/~noelbou/RxPlus/

Sorry, my boredom (it's Friday night here in California, which means
nothing on shortwave, which means me surfing the net aimlessly) got the
best of me. I was just offering random thoughts. Too random (and too
much) for you, apparently, and for that I apologize.

1871. Fading on 31m

Newsgroup: rec.radio.shortwave
Date: 2005-03-12 03:40:30 UTC
From: running dogg <run@ning.dog>
Message-ID: <4232655c$1_1@127.0.0.1>
Source record: 11358

Has anybody noticed that 31m seems to be subject to deep fades that can make program content unintelligible? I've noticed this on BBC 9525 and Radio Havana 9820 but it seems to be the whole band that is affected. Signals will drop below audibilility for a second or three then pop back up for a little while then drop back. It seems that those two stations' outlets on 49m (5975 and 6000) are unaffected. The fading on 31m seems to happen almost every day, and seems to be confined to 31m.

@l41g2000cwc.googlegroups.com:

Icom R-75, I have the DSP unit that came with the radio, but required the user to install, which I did.

Most of the time the DSP is on, for both AM and SSB reception. I like the suppression of the squeal characteristic of a nearby carrier (when my radio is on SSB).

I have no problems with it at all. Since the Icom R-75 has this feature, it does, under certain circumstances, offer better reception than I am capable of getting with my Yaesu FRG-100. (I still prefer the Yaesu FRG-100 overall).

I work in the TV elctronics universe, and I had a Sony sales rep tell
me that you are always better off buying a Japanese named product
because their NIST
required certain minimum standards. And I have seen the same VHS VCR
with a Panasonic name tag and RCA and GE that looked the same.
However the inside was very different. The USA versions had fewer parts
and
did not have anywhere near the signal to noise in the video playback.
I think the name of the organizaton was JIS.

I looked at the reviews for the 1103, and already owning an 1102, I
decided that I would NOT splurge on an 1103. I like the convenience of
having a dedicated volume control. It also seems that the performance
difference between the 1102 and the 1103 is only minimal at best. The
volume control problem, and the fake analog dial that does nothing
except shove the display and the buttons to the periphery of the front
of the radio, are BIG strikes against the 1103 IMO. Seeing that the two
radios are just about the same price on ebay, I'd go for the 1102.

Of course, one pays quite a bit for Collins mechanical filters, and
that's always been the case. Those Japanese mechanical filters were
significantly cheaper, at least back then. Reading the old magazines,
I've sometimes wondered if at least some times people were calling
ceramic filters the wrong thing.

Your description of the insides reminds me that some guy wrote about
a homebrew receiver in the early sixties, I think it was in CQ, and
he made his own mechanical filter. No, I don't have it handy and
can't specify the issue, but every so often I come across the article,
and wonder how practical it was to do. It seems like we'd have
read more about doing it if it was something easily doable.

I have no advice on the FRS radios. Check with the regs for each
country. It will take you until early summer to sort them out.

Take any radio except a Sony unless it is in your carry-on. The ATS 606
should be funky enough to deter its theft. Anything wearing the Sony
label is a prime target for the black market.

The French don't hate Americans, just George Bush.

Have fun.

It was 85 degrees F in Sacramento today. Previous record was 81. Usually
when we get balmy conditions here, you guys back there get pounded with
snow/ice/etc. But don't worry, it's suppoed to be 68 and cloudy by
Monday here, which means that you guys might get a break.

1880. Picked up my radio and have it working!

Newsgroup: rec.radio.shortwave
Date: 2005-03-12 04:22:52 UTC
From: r2000swler@hotmail.com
Message-ID: <1110601372.351961.59350@l41g2000cwc.googlegroups.com>
Source record: 11367

I stopped by Dad's last night and picked up my old radio.
A Zenith 6D512. Like I thought the filters where dry.
the couling and bypass caps checked out perfect. When
Dad's friend re-capped it back then he used "orange drop"
caps. I didn't think they where around that long ago.
We had useable caps in the junk bin, so I fixed it over
lunch, and stayed a extra hour to pull a complete
alignment. The speaker cone has a small crack, that I glued
as a temp fix. But when I fired her up I was able to listen
to the BBC on 5.975. I had forgoten that I added a BFO. Crystal
controled no less. My uncle sent me a "matched" pair of mil
crystals and some house numbered Fairchild transistors, some
perfbord and the other parts. I used a 9V battery, but I think
I can steal power from the cathode in the AF output stage.
I even added a manual RF gain control. Again my uncle gave me
the diagram. He was an Air Force radar tech, who went on to become
a EE. I have ordered "proper" caps, filters and coupling/bypass,
because I don't want to burn up a RF/IF transfomer.
And a bigger shock was the KnightKit Wireless Microphone that
I completly forgoten about. A 12AX7 as a mic and phone amp,
a 50C5 as the RF oscillator/power stage, and a 50C5 as the
AF amp/modulator. I even added a seperte level control for the
phone. You where supossed ton only use a 10' antenna. But I had
much more fun with my ~100' long wire!
My wife says she now understands my interest in cryptography.
After looking at my 40 year old scriblings she says that reading
it is a job best left to the NSA.
But an even bigger shock lay in that old box. I had "air tapes"
of my some of my broadcasts. I took them to work and covertly
dubbed them CD. No way I am going to let my coworkers hear how I
sounded at 14. If I hadn't promised my Mom and wife I would have
bulk earsed then burned the old tapes. I remember that I borrowed
a friends "Norelco" open reel to reel. 7.5IPS. How professional.
It is almost funny. My voice hadn't dropped yet, so I sounded a lot
like my sister.
The Knight kit is going to require a complete overhaul. My Dad was
much smarter then I knew. He made an isolation transformer for the
hot chasies KnightKit from two back to back 120V:24V 4 amp
transformers.
I didn't understand why, all I knew is he threatened to take my toys
away
if he ever found out I was not using the transformers for the KnightKit
or the Zenith. Damn that man sure was smart 40 years ago.
I am planing on restoring the Knight to it's former glory, but I don't

think I will try a 100' antenna. While I don't use my ham license all
that much, I would hate to loose it.
Terry

The "RCA" and "GE" names are owned by Thomson, a French owned company,
and those VCRs were probably made in China. If the Panasonic was made in
Japan, and we're talking about VCRs that were on the market five years
ago, then the Japanese product wins every time. But Japan is so
expensive and bureaucratic to work in that all the big Japanese names
are shifting their manufacturing to China. Some well placed bribes to
CCP flunkies and you're in business, no worrisome environmental or labor
regulations, pay your workers 10 cents a day and dump toxic waste into
drinking water. It's a capitalist's wet dream, which is why everything
is now made in China. If you look back over the history of capitalism,
you'll see that the ruling class did the same thing to Europe and then
the US, with the difference being that the whites fought back, at least
for a while.

I have confessed to having American, Mexican, Cuban, Kurdish, Iranian, South African, Australian friends. I also have relatives in the US, Mexico, China, Brazil. Y'know, it doesn't really matter to most people where you're from, as long as you're polite and not arrogant. I'll have a look at the PMR radios.

No stroke here. Just a busy rest of the day. Lots of snow today here in
the Great White North. As far as I can tell Cdn FRS radios are the same as
US models. I did not take them when I went to Mexico a while back.

Can't say I have my finger on the pulse of world opinion on Americans. I do
know that the current administration is thought of as suspect, but I have
the impression that's dying down with some time passing.

I have a YB-300, YB-400, ATS-606, ATS-909, and an Icom R-75. I'm not going
to buy a new radio to take. I usually travel with the 606, good size, good
reception. The most disposable of these is the YB300, which so far has
survived.

I don't think the CCRA (Cdn Customs and Revenue Agency) can confiscate a
legally imported product. They haven't the authority. They could charge
ridiculous duties however. I've appealed against them before and won.

The radio itself was pretty good.....I knew a fellow back in Iowa that had Collins filters installed and he was pretty happy with the result. I was going to match the impedance of the new filters to the '515 but I lost track of him. It is still my favorite of the JRCs.

You will be able to recognize if it happens if you start experiencing reduced sensitivity in the SSB modes. Not a big deal to clean and repack the filters. About an hour and a half for both the LSB and USB filters.

My all-time favorite is to find a spot on the dial that sounds as though
there is a faraway talk station that's just too weak to receive intelligible
speech from. Speech-like patterns, but no discernible speech.

I am not sure how hard they would be to make. I've got an old article that Mr. Johnson of Rockwell Filter Products forwarded to one of the engineers at Rockwell-Collins. There was a note included with the document saying "after you read this, you will be an expert on Mechanical Filters". I have to dig that up one of these days.
I remember the Motorola Permakay filter units that were in the Mocom 70 radios. I dismantled one the filter assemblies one day and found 14 individual ceramic filter elements, with an amplifier embedded in the bundle. They were pretty decent units.
There were some pretty cool articles in those old magazines. I remember an old in Ham Radio.....the project was kind of a spectrum analyzer for the FM broadcast band using a Bragg Cell Detector. After seeing that article, I became a homebrewer.

Fantastik took the wood grain off the "contact" paper on my humidifier,
and removed some silk screening off one item a while back. I believe 409
didn't affect either of those two items, but did affect others. Since
I've been using Simple Green I haven't hurt anything... YET. Rule of
thumb is always to find a small area where testing won't kill anything
too badly.

(I always thought Simple Green was some idiot environmentalist crap made
of water and fish piss, good for nature but not for cleaning, because of
the name. Since I've tried it, I've found it to work better than nearly
anything else for general cleaning.)

> Steve
>

Steve,

I use the DSP whenever there is too much garbage on the frequency or band like static, scratchiness, some solar bullshit, etc, in any mode. It really helps with Hams and SSB but works well with AM too {at least the Icom unit}.

I use it pretty often. Like one fellow buff said you can't have too many tools to help hear signals better. The human ear can really differentiate subtle changes and it makes listening more pleasant and less stressful all around.

What I don't like about it is too much DSP can distort sound and take some fidelity away,

But, you can live without it. I mean it's not like it's so fantastic it's gonna change your life, but it helps :)

Yes, apparently the Antigua site is being either downgraded or mothballed.
Services are to be switching from there to Fr. Guiana, Bonaire, and other sites
apparently where there is excess transmitter capacity.

Most of that stuff runs by large generators, so fuel is indeed a concern.

Definitely. You won't go to jail as someone else suggested but you
could get the radios confiscated.

>I
>would definitely check into that before going. You may wish to buy
>European compatible two ways online or if you can't do that buy them
>when you get to the Continent.

Buy them when you get over here (I'm in the UK btw). They run on
446MHz and cost (US)$37 a pair up, more if you want drop-in chargers,
and are available everywhere.

DW also used to broadcast via Montserrat, however that transmitter location was
destroyed by a volcanic eruption a number of years ago (1995).

Has anyone actually asked him if he has the radio? According to Universal the radio is to be released in mid-2005.

How did this fellow get one?

Voyager probes in funding crisis

Nasa's twin Voyager probes may have to close down in October to save money, the US space agency has said.

Launched in 1977, Voyagers One and Two are now more than 14 billion and 11 billion km from Earth, respectively.

They are on their final mission to locate the boundary between the Sun's domain and interstellar space.

But the agency's Earth-Sun System division has had to cut its budget for next year from $74m to $53m, meaning that some projects will be abandoned.

Although the Voyager probes are thought to have another 15 years of life left in them, they are very expensive to run, costing Nasa about $4.2m a year for operations and data analysis.

Other missions like Ulysses, which was launched in 1990 to explore the Sun's polar regions, might also have to be abandoned after the end of the fiscal year in October.

Although the decision is not yet final, some Nasa scientists are preparing themselves for the worst. Voyager project scientist Edward Stone of the California Institute of Technology told Nature magazine: "We are currently developing a plan for shutdown."

MORNING AFTERNOON EVENING

LOCAL GMT PROGRAMME

00:00 05:00 World News

00:05 05:05 World Briefing
BBC reporters and correspondents bring you up to date with the
latest news from around the world.

00:20 05:20 Sports Roundup
Latest international sports news and results.

00:30 05:30 World Football
Alan Green is your host for a lively and forthright look at
football around the world.

01:00 06:00 World News

01:05 06:05 China's World
This week-daily series of five programmes assesses China's

influence abroad. In particular it looks at its mighty and profound influence on the world economy.

01:30 06:30 Music Review
Mark Lowther presents news, views and personalitites from the international world of music.

02:00 07:00 World News

02:05 07:05 The World Today
The morning mix of world news, sport, business and your views, every day from the BBC.

02:30 07:30 World Business Review
We assess the big themes from the past week's business news and key thinkers explain the long term outlook for consumers and investors.

02:45 07:45 Analysis
Background to the stories in the news.

03:00 08:00 World News

03:05 08:05 Pick Of The World
A selection of some of the most memorable moments of the past seven days on World Service.

03:45 08:45 Write On
Dilly Barlow tracks down the answers to listeners' questions from programme makers, presenters and BBC World Service decision makers.

04:00 09:00 World News

04:05 09:05 World Briefing
BBC reporters and correspondents bring you up to date with the latest news from around the world.

04:15 09:15 Letter
Hear the inside story on what is happening around the world in the BBC World Serviceï¿½s letter series. Every week one of our panel of international broadcasters will reflect on the latest developments in their part of the world.

04:30 09:30 World Football
Alan Green is your host for a lively and forthright look at football around the world.

05:00 10:00 World News

05:05 10:05 Global Business
The second of two programmes 'Why China Matters'. The programme visits Liaoning province and its capital Shenyang, once the industrial heartland of China.

05:30 10:30 The Interview
Discussion or in-depth interview exploring the ideas and
thinking behind issues of modern life - politics, science, technology
and the arts.

06:00 11:00 World News

06:05 11:05 World Briefing
BBC reporters and correspondents bring you up to date with the

Hearing what appears to be the clandestine Voice of Democratic Eritrea on 12015 (based upon the music) at 1500 s/on. RTTY QRM.

Transmitter is located at Julich, Germany.

Scheduled on Saturdays from 1500-1530.

I was looking for the Voice of Mongolia, also scheduled at the same time.

I'm thinking of getting into shortwave radio (listening to it, at least), but I've heard a lot about satellite radio, the internet, and problems with power lines making shortwave a moot point. What's the future of shortwave radio? Will it stick around in its current form? Is it worth it to even buy a set, or am I better off just listening online?

Thanks!

We both bought them around the same time. Mine was made in Nov 81, his
in 85, one of the last ones made. His was new, mine was used. Mine has
two of the K filters in it, I can't remember what the name is either. It
also has a crystal 1.2 K and a ceramic 300hz filter.

I checked it last night, and clicked through the bandwiths and the
signal strength was the same in all modes, except the 300hz one, it
always reads a little lower with that one selected.

My friend's is ok too. Both have spent the last 20 or so years in air
conditioned houses, maybe that's it. I had a ton of problems with those
5 cent phono plug interconnects over the years. De-oxit took that
problem away.

>>
>> Steve
>>
While I have a PCR-1000, it does not have the DSP filter. However I have not purchased one because the reports of it's usefulness vary widely. It's kinda like Keiths's India Pale Ale, those who like it, like it a lot !! :)

So I use a software based sound card one. While I have tried many, the one I keep coming back to is called the BR-Universal-Filter. It has the usual bank of features and seems to do a good job for me. I only use it when interference makes it necessary. It has a DSP off feature and 5 customizable programmable settings, so I usually have the program running in DSP Off mode until I need it.

You can find a copy of it here:

shareware.pcmag.com/product.php%5Bid%5D75206%5Bcid%5D201%5BSiteID%5Dpcmag

Hope it helps

Most likely it has to do with conditions, most bands are not doing good right now since we are at the bottom of the sunspot cycle, as a ham working HF I can tell you that the lower bands like 80m and 160m dont seem to suffer that much but from 40m and up the signals are showing lots of flutter and fading.

That is why I am in the Hispanic sector and in Latin America. Recently did a project with a news-talk in Argentina, where the morning news and information show has 47 staffers... including a staff comedian who does hourly parodies!

In the US, nearly all Hispanic stations are live and local, know that community service actually gets ratings, and where radio is still a profession.

I recall visiting KSFO in about 1961 as a teen and remembering that it was filled with courteous people who actually thought it was significant that a 13-year-old would visit them. today, stations have to have metal detectors to keep criminals out!

I look forward to more of your postings here.

CBC's Promo Girl : video interview
http://www.cbc.ca/canadanowns/

http://www.cbc.ca/canadanowns/media/20050304ns_promo_girl.ram
If you are a CBC Radio listener, you know all about Promo Girl, the
mysterious voice that tells listeners what's coming up throughout the day.
Promo Girl's identity has been a closely guarded secret. But not anymore.
Promo Girl has been outed and it turns out she is from Antigonish. Canada
Now host Norma Lee MacLeod speaks with Promo Girl, also known as Shauna
MacDonald. (runs 3:16)

accomplishments, please.
>
> KFI is not KMPC. It is a WOAI clone. It is annoying to listen to.
> It is classless. The only reason they're #1 is the rest of the
> audience is too fragmented.

And news talk is NOT fragmented? 570, 710, 640, 790, 830, 870, 980, 1070,
1020, 99.5, KLSX, 1330, 1150 and 1540 are all talk stations in some form.
That is 14 stations in that format. That KFI has nearly a 5 share shows they
are focusing on what the market wants.
>
> For good sounding News/Talker try 810.

KGO is great... for San Francisco. KFI is a good news source, has a
significant quotient of local talent, like Handel, and is beautifully imaged
and produced by Robin. It is as good as they come, especially in the local
news coverage.

Setting concerns about BPL to one side, shortwave isn't going anywhere. Why would it? It's not like there's only room enough for a single medium of information in the world. When satellite radio and the internet lead to the closing of all newspapers, movie theaters, conventional FM and MW station, publishing houses, etc., then start to worry. But that's never going to happen.

It might turn out that shortwave isn't as commercially viable as some other media. This, in fact, is how I *hope* things play out. Granted, it will result it more major broadcasters moving to other media, but it will thereby clear up a lot of bandwidth for smaller broadcasters, much more interesting content, and awesome DX opportunities.

So, you have more reason to buy a shortwave radio now than you ever did before.

Steve

PS: Oh, and I'd be willing to wager that, ten years from now (if not five years from now), we'll all be straining to remember exactly what "DRM" was.

Like new with UT-106 DSP receive Unit, R75 Sync Module, R75 Audio Filter Upgrade (5.2 kHz), warranty card, manual, and original box. This is my first whack at the shortwave radio hobby and I find it too slow. I'll walk away for now and maybe try again when I'm much older. Asking $530 US plus shipping.
Thanks for looking!
Brian

I also wrote to this person, inquiring how they came to have this radio prior to its release. They wrote back:

I am very sorry for this misunderstanding. I went through the internet and I think this one really is not released yet. I was mistaken by my providers, they may mixed-up something. Thank you for reminding me this. I shell take this item out of auction

And yet, the auction continues. I just pulled it up on ebay. I'm not sure this person can end the auction now that there are 9 bids on the item, can he?

Well, I am certainly gratified to learn that your definition agrees with mine and that we both are adept at using the dictionary. However "wagginitproud" was the one who used that phrase, and I suspect he has no idea what the real meaning is. I was hoping that he would respond, but alas no.
Having read his post I suspect he is quite adept at throwing around phrases and otherwise performing public mind dumps, with little understanding of what the words mean. Like the term Nazi.

The title of this thread is interesting.

New *grundig E1* on ebay....

I'll bet a lot of people will associate this radio with Grundig even
though Grundig has absolutely, positively nothing to do with it.

I'm even curious to what extent Drake has had a hand in designing this
radio. They've obviously played some role, but you can scour the Drake
website from top to bottom and never see any discussion of the
E1XM--whereas you can't miss the Satellit 800 and it's up for sale
directly from Drake. Whatever role Drake had with this receiver, it
appears to have been pretty minimal.

But hey, who can resist paying tabletop prices for portable
performance?

Hi Steve, any chance you meant " 4.125 " Mhz? Seems odd to find traffic exactly 1400Hz higher than ITU# 450, which is 4.125 and a very popular marine calling and distress frequency.

The difference between USB assigned frequency and carrier frequency is 1400Hz. Some purists still like to post assigned frequency instead of carrier frequency. This confuses most hobbyists and serves no purpose since modern radios all display carrier frequency in their "window". Frequency allocations still use assigned frequency (1400 Hz above carrier and window-frequency) but that's the only place I see it anymore.

jimg, if your hobby interests will not involve computer-control, and most seem to today, then the Drake R8 is a nearly unmatched machine. But since the best software control ever made for the Drakes (Mark Fine's/Fineware Smart-R8) is no longer sold or supported, that leaves the Drakes at a slight disadvantage. Icoms can be controlled by almost all radio software programs.

Hi Jack,

I'm too lazy to worry about assigned vs carrier frequency. I just post whatever frequency is displayed on the LCD readout on my R8B. It said 4126.4 khz, and I believe the displayed frequency is the carrier frequency in SSB. Maybe the fisherman were slightly off frequency?

I don't know, but they were entertaining to listen to.

No. FRS radios are NOT allowed in Europe, etc. There is a equivalent
446 service here.

Steve, I use my R8B as a guard receiver, and it's a champ in any band. It is indeed display = carrier. So yes I would say the fishermen were just doing what they often do, tuning up wherever they feel like it, and sometimes on whatever band they feel like, lol.

Do yourself a favor and get the R8B for any kind of listening you want
to do and forget the R75 unless you want to play with the radios innards
to get the performance you want.

I would buy a set as they are cheap and portable. There is good radio on the internet & satellite but for me it does not match the thrill of DXing, I think shortwave will survive, even if the major broadcasters continue to give it up, there's new opportunities for lower power and exotic stations to be heard.

Looking to the future hopefully shortwave DRM will open up new possibilities.

Concerned eBay members can report items they think might be fraudulent by accessing http://pages.ebay.com/help/contact_inline/index.html and using the 3 steps for contacting eBay.
1. "report a listing policy violation or prohibited (banned) item"
2. "Fraudulent listings"
3. "report a listing you think is fraudulent (you didn't bid)"

Someone doing that might indicate in their report that a reputable company like universal-radio.com says the radio is not expected to be released until mid 2005.
http://www.universal-radio.com/catalog/portable/0101.html

I'd guess we'd find out if the auction can be removed if that happens.

Yeah, it was to cold in your neck of the woods for the radio waves so
they headed south and I got to receive them.

I agree that it would nice to have more recordings, but I don't have a website to post recordings on and they'd probably be too large to send via email.

Why? Nothing about SW on it.

You are a bad boy for cross-posting to unrelated news groups. This just
leads to disruption of the news groups because the subject is off topic.

Get lost unless you want to post SW news.

There is less specifically directed at various places broadcasters feel might listen with other means: N. American, Pacific. That said, this cleans up the clutter and allows us to hear stuff not directed our way like things intended for Africa or Asia. Right now the new technology looks pretty neat to many. But I wonder if the radio for a fee concept will end up where TV is. Limited on the free airwaves and more of the same crap via fee. You know: so many channels, nothing worth watching. FWIW, SW does have lots worth hearing still, I spend most evenings and early mornings tuned to something, and it's got more than what I can get locally.

I'm currently listening to Radio Netherlands. 17,875 and 17,725 with big
signal, 15,315 a little weak and 17,810 is the weakest signal for me.

This religious war has been fought for centuries - the religious borders between Judeo/Christians and Muslims and their influence on geopolitical borders in European & M.E. States.

It should come as no surprise to free westerners that Islamic states must use the brutal dictatorship of socialist/communist fascism, under the guise of the Koran, to remain in power.

Christian-Sunni opposition rejects new pro-Syrian government

Beirut (AsiaNews) - Lebanon's Christian opposition has called the reappointment of Omar Karami to the post of Prime Minister "Rafik Hariri's second assassination" and has said it would not participate in the new pro-Syrian government.
...
The Christian opposition yesterday met at Kornet Chehawan in the presence of the Maronite Bishop of Antelias and under the auspices of Maronite Patriarch Nasrallah Sfeir.

In a statement released after the meeting, the members of the Christian opposition urged all Lebanese to pursue the struggle for Lebanon's independence from Syria and expressed their solidarity with the other sectors of the opposition, i.e. Sunnis and Druze.
...
http://www.asianews.it/view.php?l=en&art=2749

Hizbullah Leader Nasrallah at Pro-Syrian Beirut Rally:
If U.S. Navy Fleet Returns to Lebanon They Will Be Defeated Again

http://memritv.org/search.asp?ACT=S9&P1=594%20

"We say to Syria, as your president, Bashar Al-Assad has said: "In Lebanon, your presence in not material or military. You are present in the souls, the hearts, the minds, the present, the past, and the future." I say to you, no one can get Syria out of Lebanon, or out of its mind, its heart, and its future.

"We emphasize that any mechanism for Syria's remaining or withdrawing from Lebanon must be subject only to the Al-Taef agreement. We, who are gathered here, have come to tell the world that we reject resolution 1559.

"Lebanon is a unique case. Lebanon is not like Somalia, in case you are thinking of military intervention. Lebanon is not Ukraine. Lebanon is not Ukraine. Lebanon is not Georgia. Lebanon is Lebanon, a unique case in this world. If there are those who think that they can bring this country down,

with its regime, its security, its stability, and its strategic choices, with their connections, their positions and sponsors, with some demonstrations, some scarves, some slogans, and some the media - then they are wrong.

"I address the following to America. I address the following to America. I say to President Bush. And to Ms. Condoleezza Rice. and to the American-Lebanese field commander, Satterfield: You are wrong about Lebanon. You are wrong about Lebanon. Lebanon rejects the partition. Lebanon rejects civil strife.

"Lebanon rejects defeat. And I say to you, this Lebanon rejects death. Never will Lebanon change its name, its history, its identity, or its attire. Lebanon will not tear off its skin, or throw its heart to your soldiers' dogs so they will eat it. Lebanon will remain the Lebanon of the homeland, of Arab identity, the Lebanon of the resistance, the Lebanon of the entire nation.

"I ask you. You can make yourself heard by the commander of the American forces in the region, who is of Lebanese origin, John Abizaid - Are you Lebanese afraid of the American naval fleets? These naval fleets have come in the past, and were defeated, and if they come again, they will be defeated again. I say to the Americans: 'Don't interfere in our internal affairs.

"Let us be, and keep your ambassador in his embassy in Awkar. He should let us Lebanese be. We Lebanese are the most devoted to our homeland, to defending our homeland, to the existence of our state, to our national unity, to our life together, and to our internal peace. Remove your fingers - the fingers of civil strife - from our country.

"To Syria we say: Long live Assad's Syria! Long live Assad's Syria! Long live Assad's Syria! Long live Assad's Syria! Long live Assad's Syria! Long live Assad's Syria! The den of the lion (Assad) in Damascus will remain a den for all the lions of Lebanon."

Spending Taxpayers' Money-Surprising Differences Between China and the U.S.

China's CCTV recently broadcast a program titled "Letting the World Get to Know China." Mayor Cui of Weihai City, Shandong Province, China, and Mayor Ives from Redmond, Washington were guests of the show. The mayors discussed the construction and development going on in their cities. Towards the end of the program, both mayors extended an invitation to the other to visit.

Their responses show us some surprising differences in the two societies. Both mayors happily accepted the other's invitation; however, Mayor Ives said that a trip to China was not in her city's budget. She explained that office expenses are paid for by the taxpayers' money and that a personal trip to China would require sponsorship rather than having Redmond residents pay for it.

In contrast, Mayor Cui cheerfully accepted the invitation to visit Washington without any concern about travel expenses. He also told Mayor Ives without hesitation that he would pay for all her travel expenses to China, which were calculated to be more than five thousand U.S. dollars or over 40,000 Chinese yuan.
...
In China, however, anything that is considered a "public issue" will get full reimbursement. For that reason, Mayor Cui does not need to worry about paying for his trip out of his own pocket and can also cover Mayor Ives's travel expenses. Several decades of the Communist Party's corrupt rule have encouraged officials from various levels of government to selfishly satisfy their personal interests to travel by calling it a "public issue." Each year these corrupt officials consume several hundred million yuan of China's income.

By spending more than 80,000 yuan of Chinese taxpayers' money, Mayor Cui will be able to indulge in traveling and sightseeing without contributing anything positive to China or its people. How many mayors in China are like Mayor Cui? Untold millions of yuan have vanished like this.

...
http://english.epochtimes.com/news/5-3-11/26970.html

The Chinese Ministry of Public Security estimates that approximately 500 corrupt CCP officials have fled overseas, taking with them combined assets of US$8.46 billion. The corrupt officials have thus established an escape path for others to follow: Transfer capital, send family members overseas, prepare passports, abuse their power to enrich their pockets, quit their job without notice and obtain legal resident status overseas.
...
Another abnormal phenomenon is that high-ranking CCP officials, who claim to be atheistic, are frequently seen visiting temples, burning joss sticks and seeking out the Buddha's blessing.
...
The recent phenomenon of high-ranking CCP officials seeking blessings from gods and Buddha is a confirmation of the ancient saying of "Clinging to Buddha's feet with one's last breath."
...
One Web user, Mr. Hebin reminds us that mice know when disaster approaches. In English, it is said that rats will desert a sinking ship. It is not difficult to deduce that the CCP will soon collapse while all of its high officials flee the country in plain sight.

Exactly! Checked the antenna just to make sure b/c we had quite of bit of
melting before this snow and I wondered about ice bringing it down
somewhere. It is intact. I must have been out of the path or something.
We're still getting aurora on clear nights, which I couldn't tell yesterday
of course.

Get the drake if you can afford it. The Icom can be quite cheap and will outperform portables in general though not many in the table top category.

How much western debt does China hold? I think it is quite high, particularly for the USA. This would mean grave economic problems for the west if China is "on the verge of collapse". As for N Korea, they are so disconnected from the world, no-one would notice except for those of us who like the comedy of their SW broadcasts

Pirate on 6955 at 2100.

No ID as of yet, still a bit weak here, but playing "Along comes Mary"?

RN was broadcasting on these frequencies 19:00 to 21:00 UTC.

Now listening to Radio Japan on 17,825 with big excellent sounding
signal 21:00 UTC.

As you could guess RA is stronger earlier in the morning trending
toward a weaker signal later morning. The lower frequency on 31 meters
fades first so I switch my listening to the higher one on 25 meters as
late morning approaches. For this time in the morning 9580 was much
stronger and 11880 is little better than usual for me. Both were very
good.

New Zealand was a different story this morning at 17:00 UTC very weak
where they were very strong during my dark hours.

Snip I'll do this once.

Please don't respond to this cross posted thread where it is off topic
in most of the news groups or at least snip out the radio news groups
from the header if you do since there is no radio content. Thanks all.

The RX340 is connected to the horizontal loop is seeing average S6 and the Drake is connected to the folded dipole cut for 25 meters shows S9.

With the volume up the Drake no background noise which is my definition of "sounding like a local station" the RX340 has some static hiss noise on the signal dips. If I switched the antennas I would expect the reverse although the Drake is a little more sensitive then the Ten-Tec.

Rock and roll playing right now.

I just looked at the Americas listings. Apparently programming in
English and Spanish for the Americas will be reduced to morning and
evening prime time, and the Portuguese service for Brazil will be
eliminated. I noticed that the alternate freq for the English service to
Central America (what most US citizens listen to) will be moved up an
hour so that 9525 will be on between 0000 and 0300 and 6135 will be on
0300 to 0500 (right now 9525 starts at 0100 and 6135 at 0400). 5975 will
still be on until 0500, but no mention was made of transmitter location
being changed, so if the site for 5975 is moved off Antigua audibility
in the US may suffer, although that's just speculation on my part.

Then do yourself a favour and *don't(!)* take the FRS-radios with you.
The FRS-freqs are in use by other services in europe and you will risk
to get in big trouble using the FRS-radios in europe. At least the
radios will be confiscated if you get cought and you will have a look
from inside a police-station for some hours and maybe have to pay a
additional fine....
PMR-radios have a TX-output of 500mW providing a range of about 500-
1000mtrs (1500-3000ft) in urban areas and up to 5 km (3 mls) or even
more from exponated locations.
These PMR-radios are cheap. Cost about 25 -50 EUROs a pair. They mostly
run on 3 or 4 AAA-cells or rechargable Batteries.

2004. It's Nice....

Reading through a lot of the postings and actually seeing headers related to Short Wave.

Terry, thanks for letting us know about the restoration work on your radios. Sounds like fun. Still wish I had my original SW set. An old Packard Bell that tuned from 5.5-18 Mc. Strictly AM, but my first station was Radio Australia. I was only fourteen and had been doing a little AM DX on an old clock radio. Same night, got the BBC, Radio Japan, Radio Moscow, HCJB, The Dutch station (senior moment there, can't remember what it was actually called....) Man I was hooked!!!!! Been doing SW on and off over the years, still do a little AM DX, and listen to my scanners Guess I'm still hooked

Eric

Well around 17:00 UTC I only listened to them a few minutes and they
were noisy with the normal static noise you hear on any weak signal but
they were "listen-able" from the standpoint that without effort I could
understand all that was said over the bookshelf speaker. That is my
definition of "listen-able."

Currently they sound about the same on 17,675 right now at 21:47 UTC. I
expect them to sound better here a little later in the day.

My plan is to listen to RA again next on 21,740 at 22:00 UTC.

> in the local news coverage.

I can't stand listening to Bill Handel. He sounds like he is spitting all over the microphone and desk when excited and I have heard enough dumb things come out of that guys mouth to last a lifetime. The radio personalities at KFI must carry their own microphone covers with them.

I have the car radio buttons on KGO 600, KFI 640, KABC 790,KNX 1070, KVEN 1520. I also listen to KGO 810 in the evening hours where they sound like a local station any night. I listen to the news on these stations and the most time. I listen to some of the personalities like Hannity during lunch time or John and Ken on the drive home but my preference at that time is Al Rantel on KABC.

The only personality I care for on KGO is Dr. Bill Wattenburg keeping in mind that I only hear KGO evenings.

Other than that the radio in the car is on a classical music station. Only one left 105.1 K-Mozart along with the public service stations.

This sounds like Urban legend. KFI was founded by the leading Cadillac and Packard dealer of LA, and was anything but a farm station save a brief period early int he morning. I thought the calls, like many early ones, were assigned in order.

Most entertainment was not designed for lasting value. Dickens was paid by the word to pad stories and draw them out to increase circulation, and Shakespeare was considered "vulgar" by the ruling classes. They both provided entertainments, and, in retrospect, we found them enduring as well. Much of the best writing of that period is totally forgotten and irrelevant. Don't be so hasty to dismiss the simple act of providing enjoyment and entertainment.

I should have mentioned the RN is hemmed in with a bubble jammer cover a transmission on the lower channel and another strong station on the channel above.

I hope that the only real commercial SW stations in the world-outside of the third world tropical banders-the US kook stations find that kook radio isn't viable in the next few years and switch to less weird programming or shut down altogether. Those stations are like the old Soviet blasters, all over the place and with signals so strong that they take up 10 khz of space on the dial. So far Bill Cooper is the only major kook to self destruct, although after Gene Scott's death I predict his stations like Caribbean Beacon will eventually wither away and die. I mean, how much money can the Wal Mart crowd give to their favorite kooks before they decide that they're either tapped out or that the apocalypse isn't coming and cut off the funds? If that happens, then most kooks who don't have local congregations (like Gene Scott did in LA) will go away, and there will be a lot of excess transmitter capacity.

Yes, I have the info now, we have diff frqs in N Amer. I did talk to a guy who used them between two cars driving through Norway, and I'm guessing they didn't interfere with anyone so no trouble. We'll check into PMR when we get there. Cell phone looks prohibitively expensive to take the local cell phone over (it will work over there). I can roam through Canada and most of the USA as if local with no additional charges but not over there.

This will allow me to avoid women's clothing stores etc.

Australia is good on 21,740 today at 22:00 UTC. S6 level on RX340 with a little noise in the background and occasional fading but no distortion with the sync and I don't miss any content because of it. This signal usually improves in quality throughout the broadcast. The folded dipole is at its 2X frequency so until I make or buy a distribution amp I'll listen to the 13 meter band one radio at a time.

> west if China is "on the verge of collapse".

Hardly, in case of a China banking collapse financial arrangements can
always be made.
We are talking about paper after all. Not gold bullion. Perhaps WalMart
stock
will collapse but the $US always rallys in times of serious worldwide
calamity.
The Chinese $Yuan may become worthless.

> As for N Korea, they are so
> disconnected from the world, no-one would notice except for those of us
who
> like the comedy of their SW broadcasts.

You are seriously mistaken. If the hermit kingdom collapses there will be a
human
tragedy on the peninsula. The economic costs to S.Korea will be worse than
what Germany has had to endure since the fall of the Berlin wall. Assuming
hoards of refugees begin to cross the DMZ. Which is very likely.

Then there is the geo-political question. Will China invade N.Korea and
claim
its territory for repayment of decades of economic support? Or will China
allow
a free and Democratic state to prosper on its economically suffering
Northeast
border with the peninsula? If so it would be a first as well as a strategic
blow
to the Communist regime in Beijing.

China historically prefers weak, non-threatening regimes as neighbors and
works
to maintain its supremacy over all its immediate neighbors.

Korean history extends into what is now Northeast China. There are Korean
claims to these lands. China is well aware of these claims and has
summarily
rewrote its history books in an attempt to erase these claims.

The best scenario for the West would be if one collapses immediately
followed by the other. Neither regime would stand which is why China
will not pressure N.Korea in regard to nuclear negotiations. China can

very easily resolve the nuclear issue since all of N.Korea's energy comes
from China. Simply turn off a spigot and flick the big switch and Kim Jong
Il
is complete history.

Ever since an earlier post addressing this topic, I have had my Icom R-75 monitoring 6.955 MHz AM. The station is just starting to be intelligible here in Pittsburgh Pennsylvania.

Signal level S7 to S9, with a lot of background noise.

They appear to be playing music.

Oh well, as I was writing this, they again faded into obscurity, you can still hear them but nothing can be understood.

Regards.

Dr. Artaud

The Chinese are currently financing the US government. They hold a BIG
chunk of US debt. The West has shifted all its manufacturing facilities
to China so in the event of a China collapse there might be serious
shortages of most goods. I think your hatred of the CCP has blinded you
to the serious implications of a potential China collapse.

The DMZ is the most fortified border on earth. The North Koreans have
gone to great lengths to make sure that nobody crosses. I'm not so sure
that hordes of refugees will be flooding across.

I don't think you'd see a democracy spring up in NK. They've had 60
years of harsh Stalinist rule. You'd more likely see a situation like in
Afghanistan before the Taliban, with a lot of local party bosses
becoming warlords and establishing fiefdoms. China may send troops to
ensure "stability". But I don't think China will invade South Korea. The
US is a major trading partner for China; the CCP is NOT going to start a
nuclear war with the US in the name of Communism.

If China thinks they can keep Kim from nuking Seoul, they may be sadly
mistaken. Unlike the massive bureaucracy that Communism has become in
China, in NK Kim is the end all and be all of government. He is totally
cut off from the rest of the world and lives in a dream world and is
much more likely to start a war with the US to "free" SK. If the US is
forced to invade NK because of Kim, the US will likely reach a quid pro
quo with the Chinese, keeping the Yalu River as the boundary between US
and Chinese troops. The mutual trade between China and the US means that
all out war between the two is not likely, even if China invades Taiwan.
The US establishment is not willing to have a nuclear war over Taiwan or
Korea.

I had this argument with a buyer a few months ago. Yes, a person CAN end an
auction, even if it has bids on it.

1) if the item becomes unavailable (i.e. broken or otherwise)
2) if the seller has decided not to sell the item (this actually goes with
1) above)
3) to sell the item to the highest current bidder

Yes, it's all there in the rules.

> money.
>

Don't know about the government per se, but the economies of several states (CA, OR, WA, ID, NM, AZ, TX) count on them for sure. Without the migrant workers, many crops would never even be planted, let alone harvested, because most Americans simply won't do those jobs for any wage. I used to work the fields (strawberries, sugar beets, potatoes) when I was young, and was almost universally the only caucasian person there. Most were Mexicans, some were Native Americans. Some Afro-Americans depending on the state, but not many.

This is not a moral assertion on whether it's RIGHT or WRONG.. only an assertion that it is fact.

My reception of the 21,740 segment did not improve toward the end of
the broadcast. Signal level was about the same from beginning to end.

Listening to RA now on 17,795 and 17,715 and also NZ still on 17,675
all about the same signal quality with a signal strength of S6 average.
NZ is better now just because the jamming one channel below and and
another strong station above are gone.

2032. New Tecsun PL-350 is a winner

Newsgroup: rec.radio.shortwave
Date: 2005-03-13 00:55:55 UTC
From: CorbinRay <corbinray68@yahoo.com>
Message-ID: <1110675355.339199.303940@g14g2000cwa.googlegroups.com>
Source record: 11770

A couple of weeks ago, I discovered a new radio on Liypn's ebay store, the Tecsun PL-350. It looked a lot like the PL-550, which wasn't really that good a performer, so I almost passed on it. But I did some research and I found out that the new radio had a bunch of good reviews, but they were all in Chinese. I used the Google translator and I was able to find out that people really liked it. So I went ahead and ordered one from Liypn.

I have to say that I'm pleasantly surprised. So much that I find that it beats my DE1103 in nearly every category. That's quite a statement, but the more I play with it, the more impressed I become.

Check out the yahoo group http://groups.yahoo.com/group/pl350/ and you'll see more about the radio.

And for anyone wanting to buy one, the eBay item number is 5755772476.

What you are likely to see in China is the collapse of their banks, which
are
already insolvent and technically bankrupt, and the disentigration of the
CCP.
Neither of which will likely spell the end of their manufacturing base. In
the very short term there may be disruptions but it would quickly recover
and without the CCPoverhead possibly become much more robust.

> I think your hatred of the CCP has blinded you
> to the serious implications of a potential China collapse.

Your love of the CCP has seriously blinded you to a brutal muderous regime
which is deeply hated by their own people.

> The DMZ is the most fortified border on earth. The North Koreans have
> gone to great lengths to make sure that nobody crosses. I'm not so sure
> that hordes of refugees will be flooding across.

If the N.Korean side of the DMZ becomes demilitarized because of a regime
colapse you can be sure that waves of refugees will find a way across or
around
it. China would also see refugees.

> I don't think you'd see a democracy spring up in NK. They've had 60
> years of harsh Stalinist rule. You'd more likely see a situation like in
> Afghanistan before the Taliban, with a lot of local party bosses

I see you are assuming that another brutal regime will take hold.
But that is not the scenario I am discussing. Besides another
regime would simply collapse as quikely as the old.

> China may send troops to
> ensure "stability".

Indeed, and that would be viewed as a very provactive move in Seoul
and the West.

> But I don't think China will invade South Korea. The
> US is a major trading partner for China; the CCP is NOT going to start a

> The US establishment is not willing to have a nuclear war over Taiwan or
> Korea.

You make many assumptions here about many countries. China is well known
for saber rattling against Taiwan. Taiwan businesses invest heavily in
China as
well. The scenario of any nuclear exchange in the region is very remote.
Regarding
N.Korea, even if Kim Jong Il does indeed have a "couple" of nuclear tipped
weapons, considering the latest intelligence and if his military is even
slightly
coherent", they would likely depose of him and refrain.

In any case, nuclear weapons aside, the Korean peninsular would become
the immediate focus of attention in the West and Beijing and Seoul would
have
many urgent and pressing meetings to attend.

I have a PL-550 and I dont think that it is a bad performer. I think it is
a pretty good performer for sw. You get images here and there, but for the
most part, it is a good radio. It has many nice features and the audio
quality us outstanding for a portable. The only place that it is really
lacking is on medium wave. Other then that, I like it a lot.

How does your new PL-350 do with image rejection and on medium wave ??? Is
the audio quality as good as on the PL-550 ???

Get the R-75 with DSP. The old Drake's encoders go bad after a while. I have read about several people having to send them in to Drake for new ones. Now, while the R8 does have a optical encoder as opposed to the later models mechcanical, those go bad too.

If you're into SSB and DXing, get the R-75. If you program listen mostly, get the Drake. But I have no problem doing BCB on the R-75.

Remember, the R-75 has Twin PBT and filters you mix and match plus DSP and it's newer. Can't be beat for the money.

Good luck.

Lucky

2036. Drake R8B "Limited Availability"

Newsgroup: rec.radio.shortwave
Date: 2005-03-13 02:20:33 UTC
From: mike0219116 <mike0219116.mail@gmail.com>
Message-ID: <1110680433.909225.83350@z14g2000cwz.googlegroups.com>
Source record: 11774

I was looking at the Drake website and I noticed several intriguing developments. I reported a couple of weeks ago that the R8 speaker was discontinued.

Now, there is no mention of the Sat. 800 on the website, you cannot buy an R8B directly from Drake anymore, and the R8B now has only "limited availability" from Drake dealers.

http://www.rldrake.com/swl/index.html

Is this Drake subtle way of saying that the R8B is riding off into the sunset in the near future?

You got it! One of the best I ever heard was between an older woman and
a young guy, both with the accents, and they went at it most of an
entire day. I kept thinking, well, that's it, and then there they would
go again. I shot Pepsi out my nose a couple of times listening to them
over the years..

The guy would threaten the woman to "Gut yah son up layke a trash feeish
and chop him up inta chum and catch a couple a shahks!!"
She would talk about "Er, ahh, yah balls wouldn't even make faih minnah
bait, thayre too goddamn smawwll!"

They threatned to burn each other's boats, families, "cahs", etc. It was
great. I wish I would have recorded it..

Whoops...it looks like you can still buy direct from Drake, but I don't think you can place an order via the internet anymore.

Source record: 11778

From what I can tell, the PL-350 seems to do a better job on MW than the PL-550.

The PL-550 has incredibly rich sound for a portable, and it beats the PL-350 in that category.

I really loved the sound and feel of the PL-550, but 90% of my radio listening is MW, so I sold the PL-550 to a friend and he is very happy with it.

And since I no longer have the PL-550, then these comparisons are subject to how well I can remember the PL-550. That means that it's probably a better radio than I can remember.

Either way, I think your PL-550 is a very fine radio.

Yeah, I copy that. Quite a bit of noise with it here in Michigan,
but he and the music can be heard clearly - his signal is actually very
steady.

That's not 4.2 mil for the probes themselves, but to perform monitoring and data analysis. The probes will continue to transmit until their power is exhausted; it's a matter of someone listening, examining the data, and storing it. That is what would be shutdown. No one is going to fly out to beyond the solar system and shut down the probes or anything.

To be honest, I'm surprised that NASA was still devoting money towards Voyager, since they had already succeeded in their missions.

Possibly. But China has a tradition of warlord rule, and for much of its history has been broken into feuding fiefdoms, despite the common culture and language of the Chinese people. Then again, the same situation persisted in Italy for a thousand years, and that country is now stable and prosperous.

>
> > I think your hatred of the CCP has blinded you
> > to the serious implications of a potential China collapse.
>
> Your love of the CCP has seriously blinded you to a brutal muderous regime
> which is deeply hated by their own people.

You seem to make this same curious error over and over again, equating any concern about China's stability and potential disruptions to the west if that stability were to be disrupted with love of the CCP. I doubt most westerners love the CCP, I sure don't. But it's the only thing holding the country together. Like I said, China has a long, bloody history of warlordism and civil war, and any collapse of the CCP might bring a return to the bad old days. This bad situation-a brutal dictatorship being the only thing keeping the world's most populous country from sliding into chaos-is exacerbated greatly by the fact that China now has virtually ALL of the world's industrial capacity. There is no more industrial base in America, Europe, Japan. It's all been moved to China. If China descends into chaos the rest of the world will go with it. Blame your beloved capitalists for being too willing to cozy up to a regime that could be toppled by a mass movement like Falun Gong and

that allows massive pollution and 10 cent a day wages.
>

Maybe to start with there would be a lot of North Koreans attempting to
cross, but it might die down after a while. There was no massive refugee
crisis when European Communism collapsed. Most of the East Germans who
fled into West Berlin right after the wall came down eventually went
back home.
>
> > I don't think you'd see a democracy spring up in NK. They've had 60

I didn't say that another centralized dictatorship would take hold, I
said that the country would descend into warlord rule and possibly civil
war. There is a difference.
>
> > China may send troops to
> > ensure "stability".
>
> Indeed, and that would be viewed as a very provactive move in Seoul

You're assuming that a pro Western ruler replaces Kim. But I'm saying
that no ruler may replace Kim, that NK would break up instead, and that
would likely be much worse than a pro West regime in the North being
toppled by the Chinese.
>

May be. But Neither ILG nor EIBI lists *any* station at any time on 6975. When I move to 6973, where Galehzahal is, I lose him - he's right on 6975 on my receiver. And they broadcast in Hebrew - that's not what he sounds like (could be, though). If it is Galezahal, it's a nice catch - 5kW from the Middle East! But without knowing for sure, I'm inclined to believe it is a pirate, for now.

Tony

Yeah - Mark Twain once said: "When I was 14 years old, I thought
my father was the stupidest man on the face of the earth. And when I
was 21, I was AMAZED at what my father had learned in only seven years!"

Beginning to sound more like a conventional broadcaster now.
Several "pro sounding" announcer voices, one of them a woman, and what
seems to be a news broadcast. I cannot make out the language, but it
is reminiscent of French, from what is intelligible.

Tony

2060. Voice of Russia coming in strong tonight...

Newsgroup: rec.radio.shortwave
Date: 2005-03-13 03:06:09 UTC
From: Invader3K <beckermt@hotmail.com>
Message-ID: <1110683169.089941.239740@f14g2000cwb.googlegroups.com>
Source record: 11799

I haven't heard Voice of Russia in a while, but am receiving it very strongly tonight on 7180 at 0300 UTC in English, here in Wisconsin. I am usually not home on Saturday evenings, though it is nice to relax and enjoy some good SWL for a change!

2061. Liberty Net 3.963 LSB

Newsgroup: rec.radio.shortwave

Liberty Net, 0300 UTC 3.963 LSB at least for now. With all the adjacent channel interference, I suspect that a move is pending.

Soliloquy.

I know. When I couldn't find it scheduled I changed the post from "Possible
Pirate" to "Pirate". At least the music is good and like you said it's a
nice catch even if it isn't a swashbuckler.

I agree - by virtue of zeroing the hets, he is actually on 6973,
but he is coming in with less interference on 6975, here. But the
longer I listen, the more obvious it is that it's a conventional
broadcaster.
I have output power shown as 5kW, but 10kW is more bellieveable (if less
impressive as a catch!)

Tony

> really be depressing.

Drake hasn't brought out a new model in quite some time. I doubt that things are going well for the company. In fact, sales of all tabletops have been going down while sales of cheap Chinese portables have been going up. Passport said in their 2005 edition that the Sat 800 (which is based on the Drake SW8 but made by Tecsun) will be discontinued shortly. AOR no longer sells tabletops in the US or indeed anywhere else except the UK. Maybe the end of tabletop makers in the west (including Japan) will lead to Chinese makers filling the void-Degen for one is seriously talking about a high end receiver, which would probably be too expensive for its traditional domestic market. But it's possible that the DXer market is at its saturation point and that demand for tabletops can be satisfied by all the used models already out there. I don't think it's the beginning of the end for shortwave radio in general-like I said Degen and Tecsun seem to be doing well-but it may be the end of the traditional DXer portion of SW.

Old burnt out TVs are readily available in the back alleys of Sacramento's Midtown District. I thought of taking one home, taking pictures of me smashing it with a sledgehammer, then making a flyer with the pic and the tagline KILL YOUR TV and posting them everywhere.

I should note that one rarely finds radios of any kind, even cheap boomboxes, in the alleys. Just TVs-when the CRT dies they're useless. I once found an old two tube portable record player, though, covered in tweed, but the motor was bad.

I watch my TV for about an hour a day-a half hour for local news and a half hour for national news. If I'm up late I may watch the 10pm news.

2071. Reception this evening BBC, Australia, New Zealand

Newsgroup: rec.radio.shortwave
Date: 2005-03-13 03:44:16 UTC
From: Telamon <telamon_spamshield@pacbell.net.is.invalid>
Message-ID: <telamon_spamshield-FA002C.19441612032005@newssvr13-ext.news.prodigy.com>
Source record: 11610

Very good with lots of signals all over the bands 16 through 60 meters.

Someone was talking about BBC transmission cut backs to north America so I checked out 5975 and 9525 just now and they are S9 with no interference, no noise or fading. They sound like a local station.

Radio Australia weak on 15,515 and 13,630 with some kind of interference on the lower sideband.

Radio New Zealand with a nice signal fluctuating S6 - S9 playing music, no noise or fading.

That's because you didn't know how to look... and you have no memory of things past...

How many damn times do you need to be told that the station on 6973 is an Israeli station?

Continuing this topic...I believe someone else brought up on this board a while ago, that one of the most requested items for victims of the tsunami in southern Asia were radios. Gee, with the prevalence of internet radio and satellites, one wouldn't think of those anymore...also, during the September 11th attacks, when cell phone towers were down in New York, ham radios still worked.

Radio (and shortwave) aren't going anywhere.

This radio is apparently NOT related to the Eton/Grundig S350, which is
the Tecsun BCL-2000.

The biggest problem you have going there with identifying a station is that you don't know how to zero beat a signal.

And that damn twin pass-band crap on an R-75 sure isn't helping.

Sheeeeeeeeesh... and everyone wonders why SW is damn near dead...

Got folks who remind you time and time again as to what is on 6973, night after night after night and every time you stumble upon you can't remember who or what it is...

Laughing my DX'ing ass off at the 'tards yet again!

I'm not sending an email copy as requested. I post responses to the
news group. Change your defaults please.

This is not an advanced idea but a good one and as far as I know the
best solution. I don't think the rotor will be worth the time and money
though. Just point it for east - west reception and that will most
likely be the best you can do. The rotor will only let you select,
which of two competing stations you hear on a channel if in different
directions. I doubt you will use it to null a local noise source since
you should not picking them up in the first place.

Shortwave radio is the only truly global information medium that can't
be censored, controlled by a handful of megaentities, or blocked.
Shortwave signals can't be grabbed and burned like a newspaper or a
computer disc. Shortwave isn't dependent on some omniscient controller
to decide what gets through the filter-SW has no filter.

I'm picking them up very well here in Miami on a R-75. There was major
interference like 10 min ago but it cleared up nicely.

The BCL-2000 is analog and huge! The PL-350 is all digital, and it's small.

For a good size comparison, Tecsun has a picture on their home page that shows these two along with the PL-550, PL-230, and the PL-200.

The science is never finished.

There is a new issue of the solar system passing into a more dense galactic cloud of dust that can have serious implications for us on earth. I want the funding to continue the examination of the solar heliopause.

Every night a signal propagates from Israel, which could happen often
since they broadcast every day of the week.

I don't know what the problem is either as I have seen it listed on
several frequency lists it should be no surprise.

You don't want to go this. The CRT is under vacuum and if shattered it
will implode followed by an explosion of glass. Cut and break the neck
first, then you can smash the tube.

Although the RA17 is a VERY good receiver, this person must have had a bad 6790/GM. Also the 6790 does not have Sync detection, so I am not sure where this eBay seller got that misinformation from. I have a 6790/GM.......typically, the 6790s have crystal filters, although LSB/USB mechanical filters were an option. I do have this filter set, but haven't bothered to install them. The crystal filters work fine. Also, the 45MHz roofing filter in the 6790 is at least an 8-pole unit and a quad JFET ring mixer is used. This receiver has an IP3 of +30dBm, so it isn't a slouch. More eBay hype.....it would be nice if this person could at least get its facts straight. Another thing.....how did this person measure the S/N ratio, with a Noise Figure meter? With your typical 15db excess environmental noise, any differences in sensitivity would be masked. It could be that this person was talking about audio quality. Those old tube units do sound very good.

I am not sure how much Drake wants for their optical encoders, but you can use either an Oak-Grisby or a Grayhill optical encoder. These are Quadrature encoders that have four pins.....these are Channel A, Channel B, V+, and ground. Universal hookup.....about 30 dollars USD.
I have gotten to play with the R8 and it is a nice receiver. The R75 is also a winner, but it gets better after you do those mods. The only mod that I have done to my R75 was to remove that MW attenuator. After that, it's a great MW receiver. Now, if they would only do something about that "large front mounted speaker". Another thing about the R75.....it would be good to regulate that wall wart down to 15 volts, using a 7815 positive regulator. Dave Zantos (N9EWO) just informed me tonight that there have been internal regulator failures with the R75. I haven't used mine enough to notice how hot the receiver actually does run.

Source record: 11634

Universal recently announced that they are again selling the AOR AR7030 Plus which is very good news.

I do not want to get into an argument and I recognize that we all have our favorites, however, it is my opinion that the AR7030 Plus is positively the finest short wave radio ever designed and it is certainly the best model under $2000. If you have or can get the 2005 edition of PASSPORT TO WORLD BAND RADIO, take a look at its specifications on page 168. They are even better, in some key aspects, than the "professional" Ten-Tec or Watkins-Johnson which cost far more. Numbers certainly do not tell all, but you cannot ignore them either.

I hope, however, that the Drake R8B and, especially, the Grundig Satellit 800 are not discontinued. It would seem to me that, at least in the case of the Grundig, there is still considerable demand. I do not understand why Eton does not put some advertsing money into it; after all, its development costs have been amortized by now so each sale is pure profit.

Best,

Joe

2097. Liberty Net 3950 KHz

Liberty Net 3950 KHz Boy, they do get around.

Perhaps banning alcohol sales on Saturdays would prevent the jammers from dogging them around the dial. Too bad this country doesn't have an FCC. Oh, what am I saying, they do, the just don't enforce laws equally.

There's also a more general theme here, in my opinion. If Drake
discontinues the R8B, then there are fewer choices for all of us when
it comes time to buy a new, high quality receiver. In this respect,
it's not just bad for Drake lovers, but for anyone who might one day
have purchased a Drake. I felt the same way when AOR stopped selling
the 7030+ in the US, and am really happy that Universal is selling it
again!

While I don't care for the 800, some folks like it and I'd like Eton to
continue it for them...assuming Eton can't come up with something
better. It should be priced at around $300 though--not a penny more.

Roughly as follows, and since it takes effort to translate the
manga histronics of the slogans I probably won't do more or
comment more about anything beyond this email unless radio
related.
Top slogan: Against oppression -- a mighty blow i.e., smash US's
oppression of us with a crushing assualt or strike
Bottom: Against castigation -- ruthless beating, i.e., merciless
punishment for the way we are derided and treated.

These are Chinese character derived so although simple syllables
are saturated with varied meanings that cannot be simply
translated into another language except Chinese or Japanese..

By the way, North Koreans live and breathe these slogans. They
fervently believe them and will gladly die for them, especially
the troops and average person. .

One of these days, if I can find one at a not so insane price.....a couple of years ago, I put out my feelers on the NG for a 515 and some fellow in the Southwest offered me his unit for almost 1000 dollars. A bit high, but I guess either the demand was there or he must have thought I staggered in from the local tavern.

I'm really kind of baffled what the guy means my 18 db signal to noise. It's kind of meaningless without knowing how it is measured. Noise is propertional to the square root of the bandwidth, so you need to know what filter is being used.

I'm not sure you would use a noise figure meter. Seems to me you would want the SNR measured from RF input to speaker output because that is how you use the radio.

I may do this measure some day for yucks, but it will be a bit of work. I'd have to fire up the old HP334A just to measure the THD of my RF generator, not that I ever used the box in that mode.

My guess is the better the cable, the better the balance of the twist, so the lower the RFI. If that were the case, then maybe going cat 6 would be the way.

Also thinking out loud, it seems with DSL you should filter the analog signals as soon as possible, i.e. where it enters the house rather than at the phone with those in-line filters. I'm sure the DSL on the crappy phone twisted pair radiates a bit.

Hmmmmm... Drake R9... I just wonder if the reason that Drake has limited availability up on their website for the R8B is that they are trying to sell off the remaining stock before introducing a newer model?

On the other hand, I spoke to Drake last year and they indicated at that time that there were no plans to introduce another receiver... the R8B was it.

Guess we'll have to keep watching Universal to see what comes up on their R8B page, at present there is no indication there of limited availability or discontinuation.

It'll be a sad day if Drake once again leaves the receiver market.

"Sedan" is code name for Sudan;

U.S., realizing the risks of nuclear tests in the United States West,
conducts the most deadly ones in a poor, developing country, Sudan.

http://www.sudani.com/dir/s.asp?l=29454

Realising that Movie star John Wayne had been diagnoised with cancer,
contracted by working in radioactive sections of the Nevada desert,
U.S Officials, acting under the auspicese of John Foster Dulles,
Bribed Sudanese officials with Liquor and Prostitutes,
then set up a secret nuclear test site in the Sudanese desert.
U.S. Nuclear tests were then conducted in Sudan between 1962 and 1970,
when Richard Nixon, alerted by the Soviet Union of the goings on in
Sudan,
ended this test program.

You can get a lifetime subscription to satellite radio, along with a receiver, for less than the cost of many worthy HF receivers (and a hell of a lot less static). The BBC is trying to tell you something.

I could also listen to them by flying to the UK, sitting in their
studio and listening to the announcer in person. And I'm about as
likely to do that as I am to subscribe to XM Satellite Radio.

Have they figured out/bothered to how to align it properly, so that the
displayed frequency matches the received frequency?

One went on Ebay a year or two ago for $1400+, it was mint, but DAMN! I almost put mine up after that, but the next one, at least as nice looking as mine, but stock (mine has been modded by Gilfer and Universal) with the crappy sounding speaker for about $675. I passed on one that looked absolutely brand new, with the 24 channel mem box, and that worthless speaker, for (I think it was) $750. None of the three pieces had any signs, not the slightest, of use on it. I kick myself for not taking it. Even the box was perfect.

Of all the receivers I have owned since I was a kid, the 515 is my favorite. Right now, I have a 525 a Icom R71A, and a Hammarlund Hq 100 that bears little resemblance to the original radio inside (3 extra tubes+ many mods), and works amazingly well for the 58 bucks I paid for it..better than any under $500 (new) receiver I have ever tried. If only it was a tiny bit more stable..

Perhaps this was the subject to an editorial by Emily Latella?

(Emily Latella was a persona of the late Gilda Radner on NBC's
Saturday Night Live. She used to do editorials about a phrase she had
misheard ["Soviet Jewelry", "Presidential Erections", "Violins on
Television", et alia] and, when informed of the actual phrase, she
would say "Never Mind".)

I had a 515 that I bought back in the 90's with the memory, remote controller and speaker for $500. It was mint.

It didn't stay here long. The package was split up to several buyers.

Pre eBay.... Ham Trader Yellow Sheet days.

Am new to this group, and was wondering where each poster is located for reference of conditions, skip, etc.

I'm located in Viera, Florida a new town, 18.1 miles due west of Cocoa Beach, FL (where I work) and ca. 50 miles due east of Orlando, Florida.

Using a Kenwood R-2000 and MFJ-1020C for SWL and a Kenwood TS-830s and Buddipole antenna for hamming (which is very limited here.) Licensed as ham since 1965.

Thanks in advance!

Really.... so, does it beat the DE-1103 in image rejection? Or, are all those stations that it is pulling in that you can't hear on the DE-1103 just images? The PL-350 is a single conversion radio, is it not? Does it have the switchable IF's of the PL-550?

You miss the point. The corruption controls the media and therefore
the elections. Until the People get the media back (or learn to
ignore it) this will continue. There used to be rules that prevented
the media from being used for propaganda. Mr. reagan did away with
them. He was a very Unamerican person.

I see little difference between our system and any other toatlitarian
government.

news:26690-4234579D-24@storefull-3176.bay.webtv.net:

Acrimony, to get you familiar with the word, if you are not as of yet:

Main Entry: ac&#65533;ri&#65533;mo&#65533;ny
Pronunciation: 'a-kr&-"mO-nE
Function: noun
Inflected Form(s): plural -nies
Etymology: Middle French or Latin; Middle French acrimonie, from Latin
acrimonia, from acr-, acer
: harsh or biting sharpness especially of words, manner, or disposition

You will find a lot of this here, as well as some actual "On Topic"
posts. (everybody makes mistakes).

Anyway, welcome to the NG.

I live in Pittsburgh Pennsylvania, use a Icom R-75, Yaesu FRG-100, Yaesu
FT-840, Sony 7600GR, and more. I have one outdoor long wire antenna and
one indoor antenna that circumscribes the small room where I keep my
radio and computer. Oddly enough, they usually provide similar
performance, especially for the range of SWLing that I do. (no intense
DXing).

I am curious about the inclusion of your e-mail address without any
attempt to keep spam-bots from purloining it, thereby risking inundation
with spam? Also your FCC license number change. Perhaps I am showing my
ignorance (most likely), but does your FCC number change as you progress
to higher levels, did it expire and was reissued, or is your call sign a
vanity sign?

Has long listening sessions ever given you tinnitus? If so, try visiting
Jonathan Creek in Maggie Valley, NC. A very restful place.

Regards.

Dr. Artaud

I noticed alignment problems with a couple of radios, especially where FM stations sounded better when they're tuned to where the dial reads 96.15 or something like that, but I think those offending radios were Radio Shacks or Sangeans that did that.

I've owned several Tecsuns, and none seemed to have any alignment problem. The BCL-2000 drifts as we all know, but the PL-350 isn't analog so there's no drift.

This is the one reason many posters use an alias and no e-mail address --
also to avoid harassment should some nut get offended by your posts.

>Also your FCC license number change. Perhaps I am showing my
> ignorance (most likely), but does your FCC number change as you progress
> to higher levels, did it expire and was reissued, or is your call sign a

Callsign allotment can be found at QRZ.com http://www.qrz.com/index.html
Look under DETAILED INFORMATION then CODE to determine vanity calls etc.

P.S. QRZ now lists Ham e-mail addresses in picture form (jpg or bitmap) to
foil the spam-bots.

An amateur does not have to change calls as they upgrade.
One may first obtain a Tech license and receive a 2x3 sequential call sign.
e.g. KA#AAA
Should they upgrade to a higher license, they may elect to retain their
original call.

It has the switchable IF. I tried it, but the original setting has always been the best so far.

The only image I've received on it so far was where I was trying to receive WLW on 700 (150 miles away), and I have local stations on 680 (4 miles) and 710 (20 miles). The PL-350 separated the stations just fine, but it received an image on 700 from a local travel station on 1610 (less than 1 mile away) that's notoriously overmodulated. For some reason, every Tecsun I own picks up that travel station on 700 in that same spot.

Otherwise, I haven't heard any images, but I'm in a rural setting surrounded by mountains and with very few high-powered stations, so sensitivity is the most important factor for me in considering any type of radio. And the PL-350 seems to be a perfect choice.

China has been under the CCP's vicious rule for over half a century.
There are very few to zero individuals still alive in China who are even
remotely aware of its pre-CCP history - they have been brainwashed.
Very few individuals in any sense of power know anything else but
CCP burocracy let alone some type of organized civil war.

The argument that the CCP provides "stability" and the people would
succumb to civil warfare is warn out CCP propaganda. If anything, a
collapse of the CCP form of government would bring the nation together
to rebuild a more Democratic form of government.

Chinese people are not ignorant pheasants like many seem to make them
out to be. Take a look at your University and its graduate and PHD
students, especially in the math & sciences. I willing to bet that a
significant percentage are Taiwanese or mainland Chinese. Granted, a
large majority still live very poorly in the countryside. But today, the
average urban citizen is fairly worldly considering the amount
of censorship in media.

Please review the circumstances that revolved around Tiananmen Square
in 1989 and please tell me if what you have seen there looked anything like
a civil war? It wasn't even close and the military came out with blood all

over them. This give credence to the propaganda about "stability" and its
irrelevence to China today.

> > > I think your hatred of the CCP has blinded you

You seem to have swallowed the CCP propaganda hook, line and sinker.
The CCP keeps spouting this same B.S. over and over again. I guess
if it is repeated often enough people, like you, will believe it. This
is a big insult to the Chinese people. The Chinese people don't need the
CCP. In fact the opposite is true!

> I
> doubt most westerners love the CCP, I sure don't. But it's the only

> no more industrial base in America, Europe, Japan. It's all been moved
> to China.

I'm sorry old boy, but this is pure garbage and sounds very much like what
is written in the CCP run newspapers in Beijing - I'm not joking. There are
many able countries that will quikely and happilly "tool up" to fill
American
orders for product. Prices may rise but to what degree will be determined
by the marketplace as it should. That assumes that there will be some kind
of collapse of its manufacturing base. That is highly unlikely considering
the involvement of western interests and western company presence.

> If China descends into chaos the rest of the world will go
> with it. Blame your beloved capitalists for being too willing to cozy up
> to a regime that could be toppled by a mass movement like Falun Gong and
> that allows massive pollution and 10 cent a day wages.

Ah ha! Now you are talking! Those big bad Capitalists again. LOL
I'll go on a political limb here and will tell you this much.
Had dear leader Nixon and Kissinger NOT reproached Deng Xiaoping
to "open up", the USSR would still be in existence today. Why? Because
the USSR would likely be profiting from China's growth all this time.
Albeit
not as robust.

Deng Xiaoping knew China had to open up to avoid an economic disaster that
we
now see in N.Korea. If the US wasn't economically friendly with China it

would have looked elsewhere and anywhere to accomplish this economic goal.
China would have solicited economic development from any CCP friendly
country
including our enemies. N.Korea is an example of this idea - selling missile
technology (from China likely) to Pakistan, Iran and Syria. Money
counterfeiting
and drug trafficking to name a few. Hardly a comforting alternative to the
west.

Nixon and Kissinger knew this and made a brilliant move by isolating the
USSR.

*** The idea to engage China is a valid one. However, the moral and ethical
degree to
which this engagement has progressed by the Capitalists is now questionable
in
my opinion. *** I think that there is now some realization of this within
the US
House and Senate.

> > If the N.Korean side of the DMZ becomes demilitarized because of a

> fled into West Berlin right after the wall came down eventually went
> back home.

I would suspect that after a reunification on the peninsula the phenomenon
will
likely repeat itself there. Unemployment will rise and the deficit will
rise. It
will be a difficult time for the Koreans but not impossible. ref: Germany.

> I didn't say that another centralized dictatorship would take hold, I
> said that the country would descend into warlord rule and possibly civil
> war. There is a difference.

After a reconsiliation with the South I highly doubt there will be
widespread
civil unrest. These people have been under Dear Leaders thumb for a very
long time and would have very little resources or even a will to pull it
off.

> But I don't think that it would trigger a western invasion of NK.

There won't be a "military" invasion. There will likely be some kind of
Korean - Chinese - Japanese - Russian & US cooperation with UN
involvment and guidance.

> > Has it occured to you that whomever overthrows Kim Jong Il may well be
> > "friendly" with the South?
>
> You're assuming that a pro Western ruler replaces Kim. But I'm saying
> that no ruler may replace Kim, that NK would break up instead, and that
> would likely be much worse than a pro West regime in the North being
> toppled by the Chinese.

What I am saying is that there is some evidence of certain elements in the
N.Korean military which would like to remove Dear Leader. These elements
seem to be aware of N.Korea's economic predicament and are more willing
to reproach the south with fewer conditions than Dear Leader impresses.
As I said earlier the Dear Leader is a proxy, puppet if you will, of China.
It is certainly clear. As China has all the strings neccessary to "pull the
plug"
on Dear Leader but refuses to do so as evidenced in the latest "round of
talks".
This is clear indication of a certain level of resistance within the CCP
towards
a pro-South reunification outcome.

A reminder - recall the recent massive railroad station explosion which
occured
within hours after the Dear Leaders return from Beijing. The Dear Leader is
afraid
to fly! Should make you ponder.

> It's possible, but there would be enough loyalists to go ahead with the
> Bomb drop and force a US invasion.

In which case the US would have a green light - not something China wishes
to
contend with I am sure you will agree.

Hi Guys,
I am thinking of putting my old Racal on Ebay but before I do I thought
I would offer it for trade . I am looking for a solid state radio with
digital display.
if anyone is interested email me.

Jimmi

2153. Sony ICF-SW77 - value? (UK)

Newsgroup: rec.radio.shortwave
Date: 2005-03-13 17:59:27 UTC
From: Cap'n <captain.black@gmail.com>
Message-ID: <67SdnQq57oti46nfRVnytg@brightview.com>
Source record: 11691

Hi..

Rooting around in a bunch of old stuff looking for suitable things to put on ebay, I came across my ICF-SW77. It's about 10 years old, bought (in London) when I was working in Russia. Anyone have a rough idea what the going rate might be? I can't even remember how much it cost. It's in good condition & fully working. I seem to remember some sort of shoulder strap but that's gone. There is the small antenna-on-a-reel that clips onto the aerial, and the English pages of the manual (the other languages have been ripped out).

I also have the AN-102 Compact Active Antenna also.

Any info gratefully received.
Cap'n.

Us webtv users do not get viruses like computers get,no hard drive,thus cannot download any computer viruses with webtv.We do get spam and junk mails though.It is possible to forward an attatchement in an email from webtv to computer users but I have never (to my knowledge anyway) done anything like that before and I have been useing webtv since October 1999.There is a website (I forget which one right now) where I can send websites/URL's to and find if it has a computer virus in it before or if I want to forward a website to computer users.Webtv and computers compliment each other.I use webtv and I also use my computer.Both have advantages and both have disadvantages.

I'm talking about the medium of shortwave radio itself, not the individual stations. Look at how a medium like say XM Satellite Radio or Directv is set up and controlled vs how shortwave radio as a medium is uncontrolled. With XM or Directv the entity controls all access and controls what is broadcast. With shortwave, I can choose to listen to the BBC or to Voice of Korea. In China, the Chinese can choose to listen to CNR or to Radio Free Asia (albeit secretly). See what I mean?

Does it seem like there's little reason to buy every portable that comes out, and end up with 30 radios when you only use a couple? I have one tabletop (Yaesu FRG-8800) and one portable (Degen 1102) and that's enough for me. I haven't been using the Degen much lately though since it doesn't perform well under these poor reception conditions that we've been having lately. Some of you seem to buy every latest portable that comes out. First off, I don't have that kind of money and second it seems like an awful waste of money to buy radios that you don't end up using just to try them out.

Source record: 11700

http://www.conknet.com/~b_mobile/NoiseStuff.html
This link should clarify things.

In summary, the theoretical value of noise is: [E^2 - tRkTB] where :

E is the RMS value of noise,
R is in ohms
T is in absolute temperature,
B is the bandwidth in Hz
k is Boltzmans constant (k = 1.38 x 10^-23 joules/degree K)

At room temperature (290 degrees K) with a 50 ohm system with a 1kHz bandwidth, this converts to a noise level
of -144dBm. 15dB excess noise from the environment converts to a level of (-144 + 15) or -129dBm. This translates to a level of slightly less than 0.1uV. This is the noise level that you might find in a very quiet rural area. In my area just north of Chicago, the excess noise is around 4uV at 30MHz, increasing to higher levels on the lower frequencies. At frequencies below 100MHz, the predominant noise is man-made noise and atmospheric noise. Above 100MHz, the noise density decreases sharply with galactic noise being the dominating factor. This is the reason that a receiver with a 12dB NF is acceptable for reception below 30MHz. When you listen to receivers that seem to be quieter than others on the same signal, this can be because of noise in the audio amplifier or because of excess phase noise in the LO (synthesizer). Excess phase noise manifests itself in a couple of ways; first of all, it can cause that "white noise" that is sometimes experiences on signals, but more often it is because of signal feedaround in the I.F. filter chain. The second way that excess phase noise manifests itself is by the rising of the system noise floor when tuning very close in frequency to a very strong adjacent signal.
Two ways that I know of to clean up this problem are: use a selective crystal filter (500Hz BW) at the Phase Detector's reference oscillator input in the synthesizer. The second way (mainly to improve close-in IP3) is to use a multi-pole filter with good shape factor as the roofing filter. The only problem here is when you use a multi-loop synthesizer to tune the minor loop at the 2nd LO frequency. The Racal 6790/GM addresses this problem by using a single loop Fractional N synthesizer. That is why they can get away with using that (8 or 10-poles?) filter at the 45MHz 1st I.F.
As far as receiving higher frequencies, the benefit of a system NF of 2 to 3dB becomes apparent. There are GaAsFET devices that have a NF of a fraction of a dB,but those are more useful for EME communications, etc.
Anyway, I hope this clarifies things.

Pete

I agree Dogg. I occasionally use a Sony ICF-SW77 at home and an ICF-7600GR when I'm traveling. Those are all the portables I need. (I should confess that I have a tiny Grundig Mini-World 100PE tucked away in a drawer, but its antenna is broken and so it would be hard to use it now.) I love the SW77, even though I think it was overpriced.

It doesn't work that way.

I for example am in linear amplifiers. When I see an amp for sale at a bargain price, I buy it in the knowledge I can resell it and not lose any money, but I had the pleasure of using it.

What would you prefer, a few hundred dollars in bank, where once a month you get a piece of paper telling you h\you have X saved, or would you rather have some equipment and enjoy using it, with the knowledge that you can always "cash in" on selling a radio and not lose any money on it?

You only live once and money is there to be spent!

Depends on what kind of listening you want to do. If you want to do serious DX'ing, I'd recommend the R-75. I also recommend the R-75 for any kind of utility or ham listening. The R-75 is not a bad receiver for program listening, but it is not ideal. The stock unmodified am sync is not effective. The disadvantage being the receiver doesn't give you the capability to minimize distortion due to signal fade. A simple and inexpensive and reversible mod can be done on the receiver to greatly improve that problem. The R8 has a sync detector that works well, but it does not do as much as the improved ssb selectable am sync on the R8b. The over all audio quality of an unmodified R-75 is not as good as the R8. The R8 series is well known for having great audio. Again, you can do a simple mod on the R-75 to spruce up the audio quality.

I've used both the R8 and the R-75. I've found that the R-75s performance using ecss in ssb mode in combination with the Icom twin PBT made it the better receiver for dealing with very weak and messy signals. Using the same antenna set up, I also found the R-75 to be the more sensative radio in practic, regardless of how close the written performance specs are on both the the radiosradios. I'd choose the R-75 over the R8 any day for DX'ing or utility.

I have a modified R-75 with both the Kiwa sync mod and the audio mod. I use it with an external speaker too. With those mods and en external speaker, I can honestly say that it is right up there now with the R8 for program listening.

In short with just two simple mods and an external speaker the R-75, can do what the R8 can do, but the R8 cant do what the R-75 can do in the way of ssb DX'ing and utility.

Michael

I've been looking for a reasonable priced remote, and they don't exist,
unless they are totally trashed. The last one I saw was over $200, and
it wasn't all that great. I saw some plans on how to make one, but I
can't find them, not that I really need it, the 525 is hooked up to the
PC anyway.

I agree with you too, Richard. I just think people are better off spending their money on tabletop sets, where the different capabilities of various sets are more pronounced and....well, they're just more *interesting* than portables.

Lets see who the tard is.
You answered to Dxass.

I answered to your reply to my post.
Now by a nice little turd and crawl back into Telamon's panties and do
her dirty work somewhere else!

Some folks enjoy trying out different radios.

Most radios seem to have a good resale value, so there is not much lost.

Hello, My name is Benji Mallicoat, I am a journalism student at San Jose State University. I am writing a research paper on the origins of radio in the United States. The focus of the paper is specifically regarding the locations of the first radio stations. Any information you can give me will be extremely helpful, and greatly appreciated. Thank you very much for your time and consideration.

Sincerely,

Benji Mallicoat

2176. Re: Radio Origins in the US

Source record: 11714

Hi Benji

"Broadcast entertainment really began in the USA in 1920. There, many hundreds of stations were soon in operation, swamping the airwaves. In Britain, the approach was more cautious. Experimental stations were tried at the Marconi site at Chelmsford, Essex, in 1920 and in 1922 at Writtle, a village nearby. This is the Writtle transmitter, callsign 2MT (see http://www.sciencemuseum.org.uk/exhibitions/2lo/111.asp) "

Good luck with your research paper (any chance of a copy?) and let me know if you need more help.

Mike

news:1138u48mbm0ac67@corp.supernews.com:

True. I don't think that most people give the prevalence of propaganda much thought. I'm always incredulous when some of my co-workers unquestioningly accept mainstream news stories. Not that these stories are untrue, sometimes they are, sometimes not, but even the frequency of the airing of the stories and the tone in which the stories are presented constitute propaganda.

Anti-Smoking propaganda campaigns are maddening. Any sensible person would realize that smoking is seriously bad for your health, yet every day, some new study is released showing that tropical fish raised in the homes of smokers are more likely to have breast or prostate cancer than those raised in non-smokers homes. (I am being facetious here).

Oddly enough, because the perceived outcome of the anti-smoking campaigns is good, the campaign itself is not perceived as propaganda, yet it is.

Well, you caught a typo, I guess that does make you smarter then the
rest. I guess this gives you the right to belittle the handicapped also?
I see that you have upset somebody so bad that they posted your address
and phone number, and your best comeback was to threaten then with
"It's pretty hard to outrun a shotgun or an SKS, or even a 45 pistol as
well.
By the way, my neighbours are all heavily armed as well. "

You carry all those weapons with you all the time?
By the way you spelled neighbors wrong! Correct your own spelling before
you make fun of somebody else's.
I'm done listening to you turd, you are such a bore! You did show your
ignorance by answering to DXass.

Perhaps you are already aware of Charles Herrold, who operated one
of the first radio stations (at the corner of First and San Fernando
Streets -- just a few blocks away from San Jose State University) in
the very early 1900s.

< Snip >

No it depends on whether you know what you are doing. I'm fed up with
people advising people new to the hobby that this is the radio to get.
This is the wrong radio for them to get unless they have the aptitude
for it. Unless you want to kill the hobby stop recommending this radio
to newbies please.

You can make exceptions for people that are technicians or engineers
that have an understanding of what the radio can do or be modified to do
or are inclined to modify it themselves.

I keep seeing people new to hobby sell the R75 they picked up and leave
the hobby.

No more shortwave Portugues to Brazil (but still to
Lusophonic Africa),
Shorter blocs in Spanish and English to the Americas
Central and South, North America was cut off some years
ago.

Looking at C and S America schedules will show you
the shortenings.

This is what someone else posted. I assume that 5975 is from Antigua and
9525 is from Okeechobee, FL at least it is according to Passport. If
this is true maybe the cuts are not in effect yet.

See
http://www.bbc.co.uk/portuguese/institutional/rebroadcasters.shtml
for the list of FM, Satellite and AM and, at the very end, current
short wave frequencies.
That's all going, but what are they doing with new transmitters in
Chile and elsewhere?
Delano, Greenville? Ascension? All have back signals that may be
heard in North America.
Portuguese still to lusophonic Africa.

I presume that China and evangels will move in to the missing
frequencies as they signed new deals with VT-Merlin for Meyerton
and Chile to South America.

Jamming the airwaves seems to be picking up as a way to "handel" SW
broadcasts. It is even screwing up some of my listening on adjacent
channels. Scanning the bands there just seems to be more of it around
lately or it is just my perception of it.

Most of the jamming I hear is either the music jammer blocking
broadcasts to Asia or bubble jamming of spanish / english broadcasts to
the Americas.

Well maybe some of them turn around and sell the old ones, I don't know. I have ended up with a collection of radios over the years, but the only portables I still have are my Sony 2010, which I only use while away from home or listening on the patio, and an MCE analog AM-only portable which I bought at a hamfest for $1. I hang onto it since I think it's neat because all the controls are labeled in German, and on front it is called a 9 Band Weltempfanger. Plus, it is a cheap portable SWBC receiver that I'm not really afraid to lose. I also have an old Realistic Patrolman-9 which was given to me, and I think it's a neat radio since it not only covers SW, but LW, MW, VHF, and UHF. It should be a fun radio to take camping this summer. I also used to own a Sony 7600, and sometimes wish I still had it. It was a really neat portable AM/SSB receiver.

It could be that many people who buy new portables have their own collection, too. I know if I had the money I wouldn't mind buying all sorts of portables. I'd probably play with each one every so often, while keeping the others on display like my own personal museum.

But, since I haven't won the lottery and the Nigerians STILL won't send me the 12 million dollars they promised, I'll just have to be satisfied with the radios I do have. And if I ever get tired of any of them, I'll sell them.

You are a prime target for disinformation. Always assume you are
being lied to, especially by those whom you are injclined to trust the
most.

Paranoia is awareness.

There's a sign on that street corner commemorating Herrold, but it doesn't give much info. Fry's in Sunnyvale has on display pictures chronicling electronics history, including one of Herrold's radio equipment and one of his house, which was a small bungalow with a massive telescope-complete with retractable dome-on the roof. Very funny looking.

RA is stronger today on 21,740 averaging more like S7 or S8 with some fading where the signal fluctuates S5 to S9. Listening 22:00 to 22:10 UTC so far.

< Snip >

-144dBm NF

Well, that's the way it is, even for expensive spectrum analyzers and other test equipment.

I see the main problem as reducing the nearby man made noise since you can't do much about propagation other than using directional antenna. The directional antenna is difficult for most people to achieve with full size antennas. The best thing to do is use an antenna that is not sensitive to the local man made noise. Lower frequencies will always be a bigger problem for the reasons you noted.

Repost from yesterday.

Concerned eBay members can report items they think might be fraudulent by accessing http://pages.ebay.com/help/contact_inline/index.html and using the 3 steps for contacting eBay.
1. "report a listing policy violation or prohibited (banned) item"
2. "Fraudulent listings"
3. "report a listing you think is fraudulent (you didn't bid)"

Let me get this straight. You rely on a fee for service media service
(XM satellite radio) for news, uncritically post far left wing
editorials off the internet as fact, and then call ME disinformed when I
point out that shortwave, as a free medium that relies on atmospheric
characteristics that cannot be controlled, is far superior to a medium
controlled by a huge corporation that makes you pay a monthly
subscription fee for access? Your thought processes don't make sense.

I understand noise computations. [In fact, my comment on it being proportional to the square root of bandwidth is because you need to multiply the input referred noise in v/root hertz by the square root of the bandwidth, assuming the noise is uniform. Conversely, take the square root of your equation.] You have mixed in way too many side issues. So are you saying by 18db SNR, he meant a noise figure of 18db?

I've never seen the measurement done, but I assume when a radio specs a sensitivity at a given SINAD, there is a distortion analyser on the audio output. The filtered signal is the "S", and the "NAD" is the residual of the signal.

Follow the ebay auctions for SW77's and see what the final bids are. I know I've seen many go for between $300 and $400 dollars, depending on the condition. Also, if you have the older SW77 that has (I believe) nine antenna elements, it won't be as valuable as the newer version that has (as I recall) eleven elements. It's a tragedy that this receiver is no longer available through Sony. Very sophisticated for a portable radio.

2231. FRG-100 FM pickup problem - solved (long)

Newsgroup: rec.radio.shortwave
Date: 2005-03-14 01:13:32 UTC
From: fcathell@msn.com
Message-ID: <1110762812.636759.306830@z14g2000cwz.googlegroups.com>
Source record: 11569

About a month ago I posted a question asking if others had experienced local FM station interference at various frequencies on the FRG-100. I finally found the cause and a solution. The FM gets into the receiver thru the 12V power cable and any other connections to the receiver (external spkr, tape recorder or computer connection, etc.) IT DOES NOT ENTER THRU THE ANTENNA; in fact, you can ground the antenna terminals and it's still there! The FM signal mixes with the 2nd harmonic of the first local oscillator for some reason, and this allows either the sum or difference signals of the oscillator's 2nd harmonic and the FM freq. to fall at various frequencies from 1 to 30 MHz. My worst were on about 5.06 and 13.1 MHz and this computed out exactly to two of the local 100 kW FM station frequencies.

The FIX: I was tired of that oddball FRG-100 power connector and the inability to use a standard 5mm coaxial power connector (common for most receivers)with the radio on camping DXpeditions so I purchased one of the standard types from Radio Shack (#274-1582), drilled an appropriate hole and mounted it just to the left of the existing connector in the blank spot on the back panel. I then soldered a small powdered iron torodial filter of about 10 uH between the connector's + pin and the top edge of the rear fuse holder (remove fuse first!) I then a soldered a 0.1 uf ceramic capacitor to either side of the toroid and the other side of the caps to chassis ground forming a pi filter. I then changed the plug on the power supply 12V cable to the standard 5mm male coaxial mating plug. The FM "intermod" is now less than S-2 to S-3 with no external antenna as long as I don't connect anything else to the accessory jacks on the receiver's rear panel. Once the antenna is connected, atmospheric noise or any signal that activates the AGC wipes it out.

I hope this helps some of you that may have this problem. I think the direct ground connection to the chassis helps the most. The oddball stock connector connects the power ground to the pc board ground plane very close to the first mixer. This is probably the cause of the problem due to common mode ground loop problems in the 100 MHz range.

ME a doctor? Thank goodenss NO!
I started tinkering with the radio the afternoon we got the antenna up. A friends dad was in the NG or reserve and he gave me some "nifty" earphones that I had to add to my radio. I still have the scar on my right leg where I dropped a big splotch of molten solder while I was attempting to solder the earphone jack. I was wearing shorts and my parents were very upset, They thought I had better sense then tto work with 700F metal while in shorts. Since the radio had an isolation transformer that I used under pain of losing my radio, my dad just made sure that I knew enough to stay out of the B+. It may sound like I made all the mods in a smooth linear maner, but it was nothing that organised. Far from it. When my uncle dropped by on his way back from leave I asked him about these strange sounds. Tune in FSK and CW in AM and you will see what I meant. He used his little portable trnsisotr AM/MW/BCB Sony? as a BFO, the LO harmonics where strong enough to at least get the point across. He made a hand drawn copy of the schematic that dad's friend gave me the night he replaced the caps in the radio.
>From that he devised some simple improvements. I was 12 years old. Other then homework and my choes,I had a lot of free time. My parents limited my TV watching to a few shows a week. So radio kept me out of worse trouble. My uncle would dream up a mod and mail it too me. Those that requried me drilling the metal chasis my dad inssited that he help or later supervise. The little add on BFO that I built still works fine. Even though I think crystals were overkill. My uncle sent me a matched as in 455 +/- 1.6KHz, or KC as the crystals are labeled. I never thought of it until this morning but the BFO makes a fine IF peaker! I lived for radio. Dad got the Knight kit after I figured out that I could take a FM radio, tune it to a local station, and FM the LO by adding AF to the AFC line. Worked very well. Maybe too well. I covered the entire subdivision. Very stable as I was locked to a commercial station. I can't remember now if the LO was 10.7MHZ above or below the station I was tuned to. I suspect dad would have freaked if he had known I fed the Knight to a 100' antenna. My friends and I scoured he area looking for radio or TVs on the curb awaiting trash pickup. I was the talk of school when I wrangled permission to take my sacred radio to school. Although mom made me leave the tubes at home. Bummer. In the grade
the order came down to clean out the shop. They allowed me to go through
the "junk" before it went to the dump. I got a WWII trainer O'scope, a simpson that dad and I fixed that he still uses. Several micrphones. Lotsof neat stuff.
I had to call dad at work and explain the windfall and he took off a couple of hours early to haul the stuff home. I have the complete set

of Popular Electroincs from oct 1954, 1st issue, until Aug 1978. I sweet talked the
school system into letting me go to vocational school starting in the 10 grade.
Radio and TV repair. Now I had no intention of fixing trashed TVs for the rest of my life, but I saw it as the frist step toward a real future. I went to Votech fulltime for the summers and had to go a final 4 months to get my diploma.
Then I started college. I was very lucky with great parents and teachers that,
while they didn't have a clue, knew it and gave me pretty free reign.
You might say I still have that love affair with radio. It is sad that as the equipment has gotten better and cheaper, the available stations to listen to
have decreased. My Zenith was a good radio in it's day, but compared to even my Grundig FR200, pretty far down the good scale, blows it away. But I will keep the Zentih and use it for special listening. Like my birthday and the holidays. I am almost afraid of what my parents will find as they continue to clean out their home. They are planning to sell and move to a retirement home, so if it there they will find it.
Terry

Personally I am all set with portables...I have my Grundig YB-400 (which I use with a Sony AN-LP1), which is excellent for me right now. I am looking forward to the warmer months, when I'll be able to take it outside and hear the world in great clarity. I also have a Grundig Mini World 100 at work. I pretty much just listen to AM on it, which is fine. I like it because it's small and is easy to tuck away in a drawer, or put in a coat pocket.

I hope to get a decent tabletop eventually, though the usefulness of a tabletop seems limited for me...being in an apartment, I can't run a wire outside. I kind of like the Satellit 800 as well (at least the reviews I've read); maybe I'll get one of those eventually.

It's cool if someone wants to pick up every portable that comes out...but I wonder how different one Chinese portable is from the next...it's not like there are so many different features between each radio.

> elecraft.

The Ten-Tec I own is a 340 and I can't comment on the 350. The 340 still costs $4K and I don't think you you want to pay that much. It's a real nice radio but way beyond the diminishing returns factor. The 350 looks like an OK radio but people here have complained about the performance here and the lack of software updates to address issues they still have with the unit.

You can't go wrong with a Drake R8B for any SW interest you may have. The R8B and 7030 have similar sound qualities with bookshelf speakers in use.

You could get a ICOM R75 if you want to play radio doctor since you seem to understand radio or electronics theory. Plan on getting an external speaker right away if you go with the ICOM. If you are a program listener like I am it's not a good choice. This unit is a POS for program listening as it will never sound as good as an R8B or AOR7030+. The R75 has a tiny advantage in sensitivity over the Drake if DX'ing is your interest, that and the twin passband and DSP might give it an edge over the Drake in some situations. My opinion here is just based on specifications. I don't plan on getting experience with the unit.

The R8B internal speaker is just OK and it sounds much better with an external speaker. The RX340 internal speaker is also just OK and the $4K unit also sounds better with an external speaker. A $20 non amplified bookshelf is all you need.

http://www.fcc.gov/mb/audio/decdoc/engrser.html#EARLY
The older annual reports often include lists of stations licensed as of that date. However, the FCC's predecessor agency FRC didn't exist until 1927 - before that date, radio was regulated by the Department of Commerce - so FCC/FRC records don't go back to the first days of broadcasting.

http://earlyradiohistory.us/

Look for a copy of the "Broadcasting and Cable Yearbook" in the University library. This book has a list of radio stations with the date they first signed on the air. (however, that list is missing many stations that have gone off the air before the date of publication. If the library has more than one copy you may want the *oldest* copy available.)

But I think you'll find there's considerable disagreement as to which radio stations were first.

- Do you mean only broadcasting stations? (hams and ship-to-shore transmissions came first)

- Do you mean the first station licensed with the specific intent of broadcasting? (some stations were licensed for other services but also engaged in broadcasting, or later transferred into the broadcasting service)

It's generally accepted that KDKA in East Pittsburgh was the first station authorized in the U.S. specifically for the purpose of broadcasting. WWJ (Detroit), WHA (Madison, Wis.), and KCBS (San Francisco, originally in San Jose) claim to have been on the air first but not with broadcasting licenses.

Something on the order of 100MHz FM has got to be common mode on the
cables going into the radio. I would expect a common mode choke to work
better than the modification you made. Use just a few widely spaced
turns of the power cord on a ferrite EMI type core should do the trick.
The choke will be more effective on the radio end of the cord in this

case.

A new car radio up grade to get it is around $350 and the subscription
cost is around $10 a month if you sign up for a year.

I used to know a tv set repairman guy about fifty years ago.One evening
I got invited to have supper with his family and his tv set was the
worst looking tv set I ever saw in my life before,but it worked great
though and most of the time he had the cabinet off of his tv set,only
the chassis of the tv set sitting on a table,his tv set running just
like brand new.Caps and recaping,what does that mean? TV sets are
actually Radios,the main difference is there are cathode ray tubes with
photons "painting" the pictures on the tube.

Where am I coming from? I coming from seeing someone new to the hobby
buy a R75 then decide the hobby is not for them and selling it. Then

exit the hobby. That's were I'm coming from.

The 350 has not had a firmware upgrade for nearly 2 years. I have one in a
closet, as it is not a particularly good AM DX machine. I have an old R8 and
a modified R75 that both outperform it.

This group has the most complete collection of modifications, usage tips, links to related websites, documentation, and photos along with a user survey and a message forum (3250 messages archived) to help you get the most fun and DX out of your Realistic / Radio Shack DX-394, DX394, DX 394.

Over 90 mods and tips now listed plus a dozen on the To Do or Wish List. More mods than for any other general coverage receiver! Thoroughly documented with a Master Index. If you like to tinker with radios, I know of no other recent model that lends itself to as much fun in this arena as the DX-394. Great platform for learning radio-electronics. Always 1 or more FA on eBay.

Active & friendly user community now with over 800 members. Some members are keen short wave listeners; others are into AM DXing and a few enjoy long wave. Many experiment with antennas and some are ardent modifiers - customising and souping up the rig as hot rodders would do with cars. You'll find lots to interest you and help get the most out of your radio.

Mods & Tips since 17 Oct 04:
- RF: FRONT END PROTECTION FROM HAM TRANSMITTER

- RF: OVERLOAD MITIGATION - WIDEBAND PRESELECTOR

- ANT: WHIP - REPLACEMENT

- RF: OVERLOAD MITIGATION WITH OUTBOARD ATTENUATOR

- AGC: HOTTER S-METER AND AGC ACTION

- DEMOD: SYNCHRONOUS AM DETECTOR

- OSC: UPGRADE STABILITY OF 2nd LOCAL OSCILLATOR

- RF: SHIELDING WITH ALUMINUM DUCT TAPE or STEEL TAPE

- CONTROL: CUSTOM MAIN TUNING KNOB

- AUDIO: ENHANCED ANTI-CHUFF MOD AKA MODE CHANGE CLICK BLANKER

All here at:
http://groups.yahoo.com/group/�RADIOSHACKDX394/

Subscribe on line or email: RADIOSHACKDX394-subscribe@yaho�ogroups.com

To continue my misinterpretation, I don't thing the British did as well in the War of 1812. They lost on Lake Erie and Lake Champlain. Think they were winning in the Atlantic though. There was a strange little war on the west coast in the 1840's also, over some little island or something and if I recall both countries disavowed it and had it settled by a commission later. I'll shut up about now.

I'm getting 6135 and 6005 (Africa) reliably most evenings here (about 0500 UTC and after) in addition to 5975. RA was quite good this morning on 6020 at 1200 UTC and after. There was a trucker idling down the block for a couple of nights and I think this may be my poor reception source. His parking that is illegal in this residential area and I may get him to go somewhere else if this repeats, though he was plugging in for charging and heat I noticed - given the temp I understand both. He left about 5:30 local or 1130 UTC and this cleaned up reception. Anyone know about diesel engine interference or is it probably his peripheral things? He has 3 antennas and a satt dish on this rig. But I was thinking CB and maybe satellite radio but I don't know what the latter looks like.

2260. where does Radio-Mart get all his stuff from ?

Newsgroup: rec.radio.shortwave
Date: 2005-03-14 03:05:31 UTC
From: mike maghakian <maghakian@comcast.net>
Message-ID: <GNidnSMKNOjhYqnfRVn-tQ@comcast.com>
Source record: 11598

every Sunday night I am amazed at all the stuff Radio Mart comes up with. as a radio collector myself I can't come anywhere near the volume he buys. I advertised I wanted an R-820 for my collection and all I got was a jerk who bragged the last one he had went to Japan for $900. and when I try to buy something real nice it seems that it gets bought 15 minutes after the listing.
and Radio Mart comes up with several DOZEN items a week. takes me a YEAR to get that amount of stuff. and usually when I buy something "mint" it has missing parts or hidden damage.
any one have any idea how he comes up with all this stuff. it is not all off ebay, ebay as a source is only a percentage of his listings ?????

2261. Re: New Tecsun PL-350 is a winner

Hmmm. I wonder if you're referring to the San Juan Island "Pig War".

http://www.outwestnewspaper.com/pigwars.html

"The Pig War began on June 15, 1859, when an American settler named Lyman Cutlar shot and killed a trespassing pig belonging to Englishman Charles Griffin of the Hudson Bay Company. "It was eating my potatoes," said Cutlar, who had already warned Griffin to keep his pig out his potato patch. "It is up to you to keep your potatoes out of my pig," was Griffin's reply."

I'd say Cutlar did just that. Makes me proud to be an American. ;)

Why don't you sell it then? Why leave it in a closet. The spectrum
display looked interesting to me. Did that display turn out not to be
useful?

My grandfather repaired radios and TVs at about the same time, and even
though he was poor he always had a TV set at a time when TVs were only
for the rich. His TVs were customer rejects-if a TV needed more repair
than it was worth the customer would say "keep it" and he'd bring it
home and fix it for his own personal use. Capacitors or "caps" are a
major part of any electronics design. Back in the tube days most caps
were made of paper and wax and tended to go bad easily. If you find an
old tube radio/TV that hasn't been used in 40 years, all the paper caps
will long since have rotted away inside and will need to be replaced in
order for the set to work. A classic indicator of just one bad cap in a
tube radio is hearing a loud hum in place of a signal.

Diesel engines use the heat of compression instead of high voltage operating spark plugs. The engine might have a DC generator instead of an alternator. The generator has brushes that spark so that could be doing it or he was operating some appliance such as a TV that was the problem. Maybe he had an inverter operating. If he comes back get the cops after him.

I believe that advocating violent revolt against the US government is illegal. Maybe we should bring David's posts to the attention of the FBI. Of course, *I* would never do that, just to get David off the newsgroup permanently, but I can't speak for anybody else.

Yeah it is pretty useful. The RX-350 is a very good high end receiver and
might still become an excellent one. It is 100% DSP and has a built-n noise
reduction and auto-notch, three sync modes, and scans very fast. Ten-Tec is
finally working toward a firmware upgrade.

Moot point; my receivers were paid for years ago,
and if I buy one, I can receive more than the BBC.
I also don't have to buy another license and equipment
if more than one person in the house wants to listen
at the same time.

The library, an mp3 player, a cd player, live365.com
and regular radio are enough for most musical tastes,
and I'm not a big fan of regular talk radio.

The BBC wants to tell me their viewpoint on the
world, just like anyone else does. I've learned after
many years to filter the news, because otherwise
I just raise by blood pressure. Is that a great tragedy?
No; there's too much that you hear that you can't do
anything about to make yourself worry about it.

It might not be finished, but as with most funded projects,
there becomes a point of diminishing returns. If this project
were thrown in with all the other DoD and DoE funding
requests, I'd doubt it would have gotten a grant. The
response would have been something like: "Didn't you
finish this already?? We have other projects to fund."

Heh, I wonder the same thing, since I've been scouring the
local classifieds for estate sales and whatnot, and that
can quickly turn into a full time job.

I wonder if he's going to bring some of his stuff up to
the Hamvention in May.

No argument here. Only discussions. I'm still trying to figure out why an R-75 would make some one quit swl. It isn't a hard receiver to use. I use one and I am by no means a broadcast engineer. Do you envision people who haven't had their first table top receiver as idiots and illiterates ??? If you can use a volume knob and an on/off switch you can use an R-75. In short, if you've used any portable out there, you can use an R-75. Perhaps I'm missing something. Can you give reasons for your statement regarding the R-75 being a reason to quit swl ???

Michael

Telamon: I looked around on the Ten-Tec site and did not see this mentioned.
Where did you read about it?

mike0219116: I know that PWBR mentioned that there was a new firmware under development. In fact, they had been suppled with a beta version of the new firmware. However, because of other committments, Ten-Tec has been unable to get a final version completed.

I'd asked about the future of the Drake series to the
service manager at R.L. Drake when I sent my Sat 800
in for a tune-up. His response was that the R8B was
it, there would be no R9. Sounds like their satellite
business is doing well; they had landed a deal with

SBC recently, he told me.

Really, it simply sounds like the future of shortwave radios from Drake is to do the designs and let someone else build it. The service manager had told me that after they'd signed the deal for the Sat 800, they'd wanted to do one more run of the SW8, but they couldn't.

That's just not true. The R8 series has been a favorite of DXers' for
years. There's a reason for that.

Well that's good news. If I had a RX350 I would jump on the offer to
beta test.

Well, any spam I get I either delete it, since I don't know who it is,
or I forward it all to spamcop.net and uce@ftc.gov.

No, my tinnitus is due to a hearing loss in my left ear and not long
listening to SW.

Yes, Maggie Valley and Jonathon Creek do help relieve it and so does
Trans-Derm Scop patches.

The world wide beacons are low power and SW BC stations use much higher
power. I probably won't hear the beacons when I probably can hear the
SW BC stations so that's why I asked about posters' locations.

Actually the 7030+ speaker isn't so great either. I got a gander of it when I installed that Kenwood CW filter. BTW, the filter works,but when measured in the system it comes out a bit wide.
http://www.lazygranch.com/images/radio/cwfilter.gif
The -6db BW was about 300Hz. Measurements were done by turning off the AGC and stepping a strong carrier. A distortion analyser was used to measure the signal level (i.e. just the sine wave) until it fell into the noise. I used the headphone output on the 7030 because I didn't have a mono mini plug handy and for some reason the 7030 speaker out didn't like the stereo plug. I had the radio in CW. I don't have the low frequency plug in for my RF generator, so I can't sweep the fitler itself.

Getting back to the second radio, I suppose I could get a used R8B, but given the nuts on ebay, I'd probably end up buying one new for less. That was why I was hoping the tentec 350 would be a good kilobuck radio, much like the 7030 was when I got it.

As soon the Drake leaves the business, expect to see ads readling L@@K, rare vintage R8B collectors item WOW!

Yes, it is true. Indeed the R8 is a great receiver and very popular.
Regardless, the R-75 is a more capable receiver for DX'ing and utility. The
primary reasons for that: The R-75 uses two filters in series and the R-75
has twin PBT. I have used both receivers. The R-75 is a better DX'ing rig.
I have no stock in ICOM or need to prove it is a better receiver. I'm just
stating facts. Using ECSS in ssb, the R-75 is a prime DX'ing rig. Nothing
against the R8.

A top firing driver sitting in a metal radio enclosure is just not going
to sound as good as a front firing 2 driver in a more solid enclosure
designed just for that purpose. All three table top radios I own sound
better on bookshelf speakers or headphones.

It's amazing how R-75 owners seem to think that only their receiver does
ECSS. It's as though ECSS was a feature of the R-75. Every modern tabletop
receiver I have ever owned does ECSS very well. So what?

Two filters in series is good why? Twin PBT doesn't seem much better to me
that 5 well chosen IF filters and a good IF passband offset control. All
that is stock with the R8, R8A, R8B receivers.

Those on the 350 Yahoo group know that TenTec improperly date stamped the
update in a website revision. The available firmware is indeed over 18
months old.

For MW DX, the display is not particularly helpful, given the very low
signal strengths, huge local to DX signal ratios, and directionality of
antennas we use today. The other features are cumbersome to use, and the
firmware to address many issues is apparently not being developed per the
Yahoo 350 group.

The receiver has no real aftermarket, unlike the R8B or the R75 or other
well known receivers. I'd rather risk the chance of getting new and workable
firmware than the hassle of selling , packing and such.

> Why leave it in a closet. The spectrum
> display looked interesting to me. Did that display turn out not to be
> useful?

Not very. Great idea, but on MW not useful due to the huge local to DX
ratios of strength.

I found one source where dealers are catered to because of the bucks they are willing to pay(more than the regular customer) and that is Value Village. I'm sure he has a few "ins" with other used retailers as well. I've missed so many bargains myself, being outdone by a dealer. I've seen them carrying lots of some really great electronics from the store. Then too, some of the employees husbands or friends in the trade will ask them to watch for good used items. They beat you to the punch before you know it's being served!

That is encouraging if it were not for the nearly two years since they last updated despite well published problems in the last versions. I have found the company to be less than responsive (which is why I did not buy a 340). I needed a new manual, and they don't have a downloadable PDF such as I am accustomed to with most computer and communications (commercial broadcast gear) I use; I overpaid for a manual to a piece of equipment the company had not updated for some time yet continues to sell.

> give him a call tomorrow, and find out why it happened. Heh heh.
> Scamming bastard. Thanks, eBay. I'm glad we were able to shut him down.
>

I wrote to him too. I said sometimes if Ebay thinks a scam is happening,
they call the police who watch the people that pick up the money and see if
they send the item out. If not, they bust them :)

But, this is how I *knew it was a scam. I read his return policy. I'm
originally from New York, so as soon as I read that your "shipping charges
are refundable", I knew this was a dummy trying to pull a fast one. See:

Return Policy
"Most of the problems can be solved via email. You will have to contact us
and we will troubleshoot your problem. If we can not help, you will simply
send it back for a full refund. When you contact us you need to be very
descriptive and send us your question, full name, item number and ebay
username. Allow 1 to 2 weeks to process refunds. Shipping costs are also
refundable".

That gave him away immediately from jump street. I didn't have to know
anything else.

Lucky

If the vertical scale is linear then they could make it logarithmic.
That might be a help.

Did Mrs. Oblinger's husband perhaps get deported? IIRC she wrote on
alt.visa.us.marriage-based a whiles back that his "refugee" status had been
rejected, therefore making him "ineligible for employment"...

I find this quite strange don't you? What is it that could cause a differential filter to work better than a common mode one in this situation where a 100MHz transmitter at significant distance from your dwelling would be able to cause coupling to the house wiring differential mode, which has to be happening for a differential mode filter to "work better" than a common mode filter.

Sure makes me wonder what the AC waveform coming into house look like. Well, what else then? Grounds can be a problem. In house wiring that is the third prong. I don't know how your radio might be using it. Some wall wart supplies don't use it. If your wall wart does use it maybe there is a problem with the house ground wire connection at the breaker box end, which would allow the ground wire to act as a good antenna for the FM band. In that case the ground could inject the RF into the power supply differentially depending on how the decoupling was arranged. This is a real reach but my best shot not being there.

You've got that right..................Neil Kazaros came up with a pretty good phasing scheme for this type of problem. I met him at the Madison, Wisconsin Dxers gathering about 5 years ago. One of his specialties is antennas.

Source record: 12049

I am not sure what he was talking about.....he
mentioned that the RA17 was able to hear signals better than the 6790 could.
Didn't make much sense to me, unless he was talking about audio
characteristics. My "side issues" were potential mechanisms that could cause
that type of problem. This wasn't aimed at you.....this was
mentioned for the benefit of some of the new folks on this NG (there are
thousands of folks in this audience). I never heard of an 18dB SNR; typical
signal plus noise to noise ratio is generally specified at either 6dB (
older Collins equipment) or 10dB. Exceptions were some of the Hallicrafters
equipment that was specified at 20dB signal plus noise to noise ratio.
When I am talking about noise figure, I am talking about input signal to
noise vs. output signal to noise. This is a measure of how much noise the
receiving system is adding to the original signal.
What I was talking about was excess noise from the environment. This term of
excess noise is used in the industry; at least it was a familiar term to the
folks at Rockwell-Collins.

> issues. So are you saying by 18db SNR, he meant a noise figure of 18db?

I didn't say 18dB SNR.....I said 15db excess noise from the
environment. Quite a different thing.
>
> I've never seen the measurement done, but I assume when a radio specs a

You are talking about NAD.....noise and distortion?

The only time a distortion analyzer is used is when making the SINAD type of
measurement, and that is generally when characterizing an FM system. This
type of measurement is not generally used with AM systems, either envelope
detection or SSB detection. The only exception I ever saw was in the Lowe
HF-150 service manual.

I find the Drake R8 series, while a decent enough receiver, really
annoying to use, and I don't like the looks of it at all. While the R75
isn't something I would buy at this point, it's not a bad radio for the
price, and the annoyance factor is about one third as much as the Drake.

I can't see how a R75 would have anything to do with people leaving the hobby.

2315. Thoughts on the demise of the former BBC/DW Carribean Relay Station...

Newsgroup: rec.radio.shortwave
Date: 2005-03-14 08:09:34 UTC
From: Max Power <mikehack@u.washington.edu>
Message-ID: <d13gsb$18i$2@gnus01.u.washington.edu>
Source record: 11953

Thoughts on the demise of the former BBC/DW Caribbean Relay Station...

Websites with details of relay station:
http://www.tdp.info/atg.html
http://www.transmitter.be/mar-b6122.html

-=-=-=-=-=-=-=-=-=-=-=
Possible reasons for shutdown
-=-=-=-=-=-=-=-=-=-=-=

1. Marconi is totally out of the SW transmitter business, so transmitter repair over the long run is a gamble.

2. The B6122 transmitters were not very efficient, electrically -- 65% vs 85% with most modern transmitters.

3. Two modern ALLISS modules could replace the existing Caribbean Relay station.
(ALLISS module info :
http://www-db.thomcastcom.ext.coltfrance.com/db/thomcast/webdriver?MIval=V_Prod_Detail_b.html&F_ID=5&D_ID=1&P_ID=9)

4. There is extra capacity for SW transmission on the South American continent, where hydropower is used vs more costly diesel. HCJB could, along with TDF cover the Americas with their existing and spare SW transmission capacity.

5. Because the US / Canada and Western Caribbean are not BBC/DW target areas anymore, it becomes logical to sell the facility off so that it can be turned into an upmarket resort -- thus putting some Euros into cash strapped BBC/DW/VT-Merlin.

2316. Re: RACAL RA-17C12 with DSP / digital readout

Source record: 11954

Note that the advert said "Signal / noise 18 db. " Now of course the seller doesn't know where you live, so the argument about excess noise, though interesting, doesn't seem relevant to the ad. I'm not trying to be a jerk, so please don't take any offense.

Most distortion analysers measure signal to noise and distortion. I beleive the AOR 7030 has a similar spec, which would make sense given the Lowe and AORUK history.

2317. Re: Drake R8B "Limited Availability"

Newsgroup: rec.radio.shortwave

Source record: 11955

Funny thing about the 7030 is the audio path is stereo except for the speaker output. You do hae stero to the headphones. This relates to the FM stereo option that never got released. It would have been nice to see the FM stereo come out as a new radio from AORUK since I assume much of the engineering had been done already. I'm sure it would have been a good one.

2318. BBC Broadcasts into US ?

Newsgroup: rec.radio.shortwave
Date: 2005-03-14 09:11:45 UTC

MW,

A while back, I bought a Sharp "Radio Controlled" Travel {Atomic}
Clock at a DD's Discount store for $4.99 they use a single "AAA"
(1.5 VDC) Battery; and is Made-in-China.
.
Last weekend, I was in WalMart looking foe a new Senior Citizen
'type' Wrist Watch to replace my Timex "IronMan".
.
While I was there I noticed a "Radio Controlled" {Atomic Clock}
Wrist Watch that had an regular price under $15.
.
FWIW - Looked around and final settle on a Digital Wrist Watch
with Four Large 1/2" HH:MM Numbers. Big enough so I could read
the Numbers without my Glasses. The Wrist Watch is labeled as
an 'Alarm Chrono' and the Brand Name was "Athletic Works"
by MZ Berger = Made-in-China.
.
OBTW - One thing I notice was that WalMart is now selling AAAA
[Yes that is Four "A"s] Rated at 1.5 VDC Batteries.
? Anyone know of an application for these extra small type "A"
Batteries ?

You can hear them.
6195 and 15190 kHz mornings
12095 afternoons, 5975 evenings
for more specifics check
http://www.primetimeshortwave.com (English language schedules on the left)
and http://www.eibi.de.vu (bc-b04.txt)
be aware that broadcast times and frequencies for lots of stuff will change
with "Summer time", which starts about a week before our U.S. daylight savings time
BBC is reliable on the above frequencies

Just curious - I notice that some of the radios on eBay are described as missing the battery cover. I'm just curious; where do they go? I can understand missing manuals, broken antennas, etc. But how do you lose a battery cover? Would anyone ever take one off and then set it aside, instead of putting it back on the radio? Anyone here ever "misplaced" one?

On a couple of my old handhelds, you drop it, even in the case, and the
battery door was gone.. My Regency Hx1000 was the first one I had duct
taped up..

I had the one on my Pro-43 just wear out, it wouldn't stay closed after
a certain time, and the door would fall off. Someone screwed up the mod
on one, and mine got a new back and battery door from the corpse...

Caps=capacitors.
Used to smooth the pulsating DC to smooth, no hum, DC.
And used to couple RF and AF from one statge to another.

Recap+replacing the capacitors

Capacitors don't age well.

They tend to dry out and open up, a marked decrease in
vaule. Or go "leaky". That is to allow DC to go through, like
you add a resistor in parallel. All caps leak a little, most of
the time it is so low you can ignore it. Older caps, say from
the 30s~early 60's tended to be wax paper and aluminum
foil. The paper absorbed water over the decades and
started leaking. Larger electrolytics, as used in power
supplies, can have the liquid leak out. This can be a lot like
a battery leaking as the juice was corrosive.

New caps, especially bypass and coupling tend to be mde with
plastics, and are sealed much better. I think the Sprague "Orange
drops", so called because of their odd orange color, have
much better seals and are made of plastic and aluminium.

You might want to see if a local library has an oder, before 1980,
edition of the ARRL hand book. It will have a lot of usefull data.

I wonder if there isn't more to the story. The manufacture of high-end tabletop sets long ago ceased to be a gravy train, even before the R8 line itself appeared. Someone at Drake, it seems to me, was committed to continuing the shortwave business *anyway*, and I wonder if that person (or persons) is either gone now or on the way out. We may never know.

I keep wondering if there's any way I can afford to buy a second R8B before they're no longer available new. Unfortunately, the answer is 'no'!

Source record: 11969

Guess what folks, I think I've finally found the cause for the FM bleedthrough on the ICF-7601 - plain ol' 1st LO crystal harmonics. The 4th harmonic (!) of the 20.4 MHz crystal used for 31m together with a local on 92.6 MHz will result in an 11.0 MHz signal which promptly appears near the bottom end of the 31m band (spectrum on 1st IF level is flipped). The old ICF-7600A had a somewhat differently constructed 1st LO circuit which looks to me like it should be less prone to this happening (LO signal tapped after buffer - with some lowpass filtering through a coil - instead of at the crystal). I guess my theory about the '7601 having been developed from the '4900 wasn't that wrong...

I'd asked about the future of the Drake series to the
service manager at R.L. Drake when I sent my Sat 800
in for a tune-up. His response was that the R8B was
it, there would be no R9.

I'm afraid I can confirm this. I got an email message from Bill Frost
this morning. He said the R8B is the end of the line. There will be no
R8C, R9 or anything else. It's the end of Drake receivers. Very
unfortunate.

I think that's it, too. Battery door covers on most things break
like potato chips. And most people, once it's broken, toss it.

I suggest you study-up on your American history before making these
absurd pronouncements about my Patriotism. Blindly following despots
in not in the spirit of the Founding Fathers.

Protest is the highest form of patriotism. Reagan reduced Freedom of
Speech when he allowed broadcasters to censor opinion. Not in the
great tradition of open thought that our country is founded upon.

Look it up.

>... But how do you lose a
> battery cover? ....

There are "cover gremlins," just as there are sock
gremlins and screw gremlins. You can disassemble a radio,
put it back together and you usually will either have
screws that mysteriously go missing, or extra screws
that don't seem to go anywhere. The Screw Gremlins,
which live on the inside of the power sockets nearest
your bench, either take screws from you or
leave ones with which they have become bored.
They consider this a "fair exchange" over time.
Same with Sock Gremlins: put three matched pairs
of socks in the dryer and out will come either
two pairs and one odd sock, one pair and four
unmatched socks, seven odd socks or any other
combination. Cover Gremlins are, however,
much more greedy; they almost never return your
covers and, if they do, they break them first.
There is no cure for them; they are just
a fact of the radio life.
The Duct Tape Gremlins do help somewhat with
this problem; they are responsible
for the five or six loose, partial rolls of duct tape
you can always find if you move stuff around enough.
Sympathies,
David S.

No but I picked up a mint DX380 (Sangean 505) at an estate sale for $5
because it didn't have the covers. Luckily the shack still had the covers
and the pouch/cover for it. Just last week I saw a real clean Lafayette (a
blast from the past) portable at an estate sale minus it's covers, didn't
feel like I would be lucky enough to come up with covers so left it
sit and walked out the door with a real clean Versa tuner 2 for $5. RM~

While there may have been a Maryanne Kehoe who has passed away, it is not the Maryanne of our hobby. Deliberate confusion is practiced on the internet by nasty individuals who use aliases, (hey wait, I'm using an alias too).

Maryanne is an avid SWL from Atlanta who contributes regularly to various online and print publications centered around Shortwave. Most notably she forwards press releases and the schedule of Voice Of Russia on a regular basis to the groups and clubs she participates in. You can find reports from her in Monitoring Times.

The immature males who can't accept a woman as a DX'er in their hobby ridicule and put her down because she can be quite obnoxious at times, is tall for a woman, horrendously top-heavy and preferred to wear crew cuts. Under that exterior, which has shed a large quantity of poundage, and added an inch or two of head hair in the last year, she has a heart of gold.

I used to rag on her until one night when a bunch of us got into a chat room and started discussing the bad things we said about her. After a few minutes of laughing it hit us that we were all being jerks and none of us have said anything derogatory about her since. Gee, I think I've done penance.

Right, future of sofwave radio is Digital Radio Mondiale (DRM)! There
are also first receivers availabe and acording to DRM Consortium
(http://www.drm.org/) most major broadcasters are already or will be
soon testing DRM broadcasts.

DRM is the world's only non-proprietary, universally standardized on-air
system for short-wave, medium-wave/AM and long-wave.

Benefits of Digital AM for Listeners:
- FM-like sound quality with the AM reach ;
- Improved reception quality;
- Flexible use of radio, whenever and wherever you want it;
- No change to existing listening habits:
- same frequencies,
- same listening conditions (fixed, portable and mobile radio),
- same listening environment (indoors, in cities, in dense forests..);
- Low cost receiver, low energy consumption;
- Easy tuning: with selection by frequency, station name or programme
type;
- More diverse programme content, using the full capabilities of new
digital features;
- Wide receiver range with more and better features;
- Radios that will give you programmes with associated text information,
station name, record title, singer□s name...

Some receivers available:

Mayah Communications The DRM Receiver 2010:
http://www.mayah.com/index.php?id=8

Coding Techonlogies USB receiver for DRM:
http://www.codingtechnologies.com/products/digtrav.htm

SISTEL di Ing. Re Claudio

It took so many years to get to where they are. In another 15 years, they would be passing through parts of the solar system fringes we will probably never have access to for decades, if ever. Would be a pity to simply cut them off and loose our link so far out into space... perhaps they can consider an automated system to receive and log the data , and to only trigger human intervention if a pre-determined change in data stream is detected...

True, but I was referring to the lower frequencies (e.g., the 7390 kHz
that is the subject of the OP) which typically suffer during daytime
hours. Generally, I'm finding even lower, directed at West Africa
transmissions are coming in quite strongly for me in Eastern North America.

When first got my radio I just got noise around 30M during the day, or
maybe just local Hams on SSB.

I have been experimenting with different antennas, so maybe it's been
this way all winter, and one of my experiments is working better for me.

The 14 Characteristics of Fascism
by Lawrence Britt
Spring 2003
Free Inquiry magazine

Political scientist Dr. Lawrence Britt recently wrote an article about
fascism ("Fascism Anyone?," Free Inquiry, Spring 2003, page 20).
Studying the fascist regimes of Hitler (Germany), Mussolini (Italy),
Franco (Spain), Suharto (Indonesia), and Pinochet (Chile), Dr. Britt
found they all had 14 elements in common. He calls these the
identifying characteristics of fascism. The excerpt is in accordance
with the magazine's policy.

The 14 characteristics are:

Powerful and Continuing Nationalism
Fascist regimes tend to make constant use of patriotic mottoes,
slogans, symbols, songs, and other paraphernalia. Flags are seen
everywhere, as are flag symbols on clothing and in public displays.

Disdain for the Recognition of Human Rights
Because of fear of enemies and the need for security, the people in fascist regimes are persuaded that human rights can be ignored in certain cases because of "need." The people tend to look the other way or even approve of torture, summary executions, assassinations, long incarcerations of prisoners, etc.

Identification of Enemies/Scapegoats as a Unifying Cause
The people are rallied into a unifying patriotic frenzy over the need to eliminate a perceived common threat or foe: racial , ethnic or religious minorities; liberals; communists; socialists, terrorists, etc.

Supremacy of the Military
Even when there are widespread domestic problems, the military is given a disproportionate amount of government funding, and the domestic agenda is neglected. Soldiers and military service are glamorized.

Rampant Sexism
The governments of fascist nations tend to be almost exclusively male-dominated. Under fascist regimes, traditional gender roles are made more rigid. Opposition to abortion is high, as is homophobia and anti-gay legislation and national policy.

Controlled Mass Media
Sometimes to media is directly controlled by the government, but in other cases, the media is indirectly controlled by government regulation, or sympathetic media spokespeople and executives. Censorship, especially in war time, is very common.

Obsession with National Security
Fear is used as a motivational tool by the government over the masses.

Religion and Government are Intertwined
Governments in fascist nations tend to use the most common religion in the nation as a tool to manipulate public opinion. Religious rhetoric and terminology is common from government leaders, even when the major tenets of the religion are diametrically opposed to the government's policies or actions.

Corporate Power is Protected
The industrial and business aristocracy of a fascist nation often are the ones who put the government leaders into power, creating a mutually beneficial business/government relationship and power elite.

Labor Power is Suppressed
Because the organizing power of labor is the only real threat to a fascist government, labor unions are either eliminated entirely, or are severely suppressed .

Disdain for Intellectuals and the Arts
Fascist nations tend to promote and tolerate open hostility to higher education, and academia. It is not uncommon for professors and other

academics to be censored or even arrested. Free expression in the arts is openly attacked, and governments often refuse to fund the arts.

Obsession with Crime and Punishment
Under fascist regimes, the police are given almost limitless power to enforce laws. The people are often willing to overlook police abuses and even forego civil liberties in the name of patriotism. There is often a national police force with virtually unlimited power in fascist nations.

Rampant Cronyism and Corruption
Fascist regimes almost always are governed by groups of friends and associates who appoint each other to government positions and use governmental power and authority to protect their friends from accountability. It is not uncommon in fascist regimes for national resources and even treasures to be appropriated or even outright stolen by government leaders.

Fraudulent Elections
Sometimes elections in fascist nations are a complete sham. Other times elections are manipulated by smear campaigns against or even assassination of opposition candidates, use of legislation to control voting numbers or political district boundaries, and manipulation of the media. Fascist nations also typically use their judiciaries to manipulate or control elections.

I'm curious as to what users have found when they use the general coverage in their ham transciever for SWLing and VLF. Has anyone made any AB comparisons to their SWL gen. cov. RX? Which ones seem to be best? I know Kenwood and Icom make SWL receivers that look much like a transciever and might even use the same circuitry, not sure about Yaesu though. The Icom R-75 looks a lot like the Icom 718 but the Rx has the PS built in. I can't recall the Kewood models. How about the Kenwood TS-2000 or Icom 756 Pro for gen cov?
tnx

2375. Re: RACAL RA-17C12 with DSP / digital readout

Newsgroup: rec.radio.shortwave
Date: 2005-03-14 17:26:41 UTC
From: Pete KE9OA <p.gianako@worldnet.att.net>
Message-ID: <IPjZd.135625$Th1.42767@bgtnsc04-news.ops.worldnet.att.net>
Source record: 11912

Oh, I don't think you are being a jerk at all, and I don't take offense!
This newsgroup is all about sharing, and I appreciate your contributions,
along with everybody elses contributions. This is what it is all about!
Anyway, I didn't see that original spec that the person gave, but looking
at the ad again, I do see what you mean. The whole point I was bringing up
was the statement that the seller made about the RA17 being able to hear
weak signals better than the 6790.....I believe that there was some
sensationalism in that statement. What I was also saying was that if two
receivers have a low enough noise floor such that antenna noise overrides
the internal noise of the system, both of the receivers should be able to
hear the same signal. One of the units may have better audio quality and be
more pleasant to listen to, but I think that this is about as far as things
go.
Now, it could really be that in Racal's specification that they are actually
specifying a sensitivity of so many uV for an 18dB S+N/N ratio. I just don't
know.
I do understand what you are saying about distortion analyzers.....I
have an HP 339A of my own, but most of the time I use it for characterizing
audio equipment or for aligning the detectors of FM systems using the SINAD
method.
I remember the 334A also had an envelope detector so that you could measure
the distortion of RF sources up to 50MHz. I also do realize that one of the
best ways to check a radio is to measure the distortion of the RF, detector,
and audio chain by injecting a modulated RF signal at the antenna input at
around 1000uV and measuring the distortion at the audio output with a
distortion analyzer. This is one of the tests I do with my own homebrew
receivers.....I shoot for under 0.5% distortion; if this occurs, I am
relatively happy.
On a final note.....feel free to shout me down
anytime, either in this NG or directly. I realize that I only know a small
portion of what there is to know, but I try!
I wish you the best!

Pete

■ PL350 has been the German fresh engineer summarizes the for many years number 调机 design experience, and listens to the domestic and foreign radios amateur's precious suggestion carefully designs becomes
■ this machine outward appearance is exquisite, the function are many, the operation is simple, the sensitivity is high, the selectivity is good, the timbre is exquisite, may listen to the frequency modulation stereo sound with the earphone
■ is equipped with the high / center / low 3 grades of sensitivities control, facilitates receives the good broadcasting station program under the different environment
■ the frequency modulation / short-wave band is equipped with the best sensitivity 调节旋钮
■ center / the short-wave band used the 450/455kHz variable intermediate frequency technology, greatly enhanced the anti- mirror image frequency disturbance the ability
■ may automatically search and the memory frequency modulation and the medium wave broadcasting station program (the ATS function)
When ■ listens to the news / music different program, may use the high / bass switch adjustment acoustic fidelity
■ the medium wave / FM broadcast may establish the world various countries local standard: The FM wave band may establish covers 87-108mHz (suits national FM service pattern and so on the China, North America and Europe) or establishes 76-108mHz/ the Japanese FM service pattern (may listen to our country partial campus broadcast / 电视伴音); 中波段 the frequency step enters may establish 9kHz or 10 kHz (North America medium wave service pattern)
■ this machine harmonious precision high: The frequency modulation

reaches as high as 0.01mHz, center / the short wave is 1kHz
■ has many kinds of harmonious elects the way: 手动搜索,
automatic search, direct input broadcasting station frequency or search
memory address
■ this machine used the multi- functions numerical code type flying
shuttle knob, serviceable established the clock, the adjustment
frequency, the address and the page 面数, you also might at will open
/ close this knob the accent static chirp function.
■ this machine may wilfully save reaches 550 broadcasting stations
frequencies, also for a long time does not electrify also does not lose
remembers its tendency minute page memory pattern is extremely flexible
practical: This machine fixes the P0 page for remembers 50 broadcasting
stations frequencies; You may act according to individual affection,
other 500 memories address, divides into 10 page of X50, 20 page of
X25, 25 page of X20 or 50 page of X10 memory contact surface,
facilitates you stores up the memory each kind of different
broadcasting station frequency according to the different page /
address pattern
■ this machine may establish 12 or 24 hours clocks demonstration
service pattern, open machine after simultaneously demonstrates the
time sum frequency rate
■ the creative intelligent sleep automatic pass machine function, you
may according to individual custom resetting automatic pass machine
time length
■ may establish fixed time automatically open machine after listens
to you assigns the frequency the broadcasting station program
■ the many kinds of at night illuminates the pattern, and is equipped
with the at night operates the automatic illumination function
■ uses 3 R6 (5) the battery power supply
■ inside set at the entire automatic pulse width 恒流 充电电路,
might examine the charge battery capacity size which the battery peak
voltage, could act according to again uses, automatically established
充电时间, filled 自停, on the LCD screen as necessary
demonstrated 充电时间 and the voltage height
■ stochastically forwards as an enclosure the high quality stereo
sound earphone, 3 1100 milliampere / o'clock nickel hydrogens charge
battery, outside the DC-06 voltage-stabilized source, the short wave
meets the antenna and finely guarantees the protective covering.
. . . . . .
Tecsun PL-350 Radio - Technical Specification :

1. Frequency range
Frequency modulation (FM)
Standard frequency cover: 87.00 ~ 108.00 MHz
May establish suits the campus broadcast / Japan scope: 76.00 ~ 108.00
MHz
Medium wave (MW)

Asia, Africa and Europe: 522 ~ 1620 kHz
May establish the American / Canada: 520 ~ 1710kHz
Short wave (SW) 1711 ~ 29999 kHz
Rice wave band frequency range (kHz)
120m 2250 - 2550
90m 3150 - 3450
75m 3850 - 4050
60m 4700 - 5100
49m 5800 - 6300
41m 7100 - 7500
31m 9400 - 10000
25m 11500 - 12150
22m 13500 - 13900
19m 15000 - 15900
16m 17450 - 18000
15m 18850 - 19100
13m 21450 - 21950
11m 25600 - 26100
.
2. Harmonious step enters
Frequency modulation (FM) quick 1.0/0.1 slow 0.1/0.01 MHz
Medium wave (MW)
Asia, Africa and Europe: Quick 100/9 slow 9/1 kHz
American / Canada: Quick 100/10 slow 10/1 kHz
Short wave (SW) quick 100/5 slow 5/1 kHz
3. Memory broadcasting station frequency quantity 550
4. Chirp limits the sensitivity
The frequency modulation (FM) (S/N=30dB) surpasses 3 mu V
The medium wave (MW) (S/N=26dB) surpasses 1mV/m
The short wave (SW) (S/N=26dB) surpasses 20 mu V
5. Amplitude modulation single signal selectivity: ±5k when surpasses
28dB ±7k when surpasses 45dB
6. Power source
Stochastic charge battery (QN1100m) 3 R6 (5) battery
External power supply (DC-06)
7. Machine inside speaker 16 Omega 0.25w
8. Outside meets earphone 32 Omega
9. Size approximately 141x87x28 mm
10. Weight approximately 350g (does not contain battery)
Product standard number: Q/DS 1-2003
Marking registration 备案 number: 441900 33-187

2377. Re: Ham transceiver gen. cov. Rx ?

Newsgroup: rec.radio.shortwave
Date: 2005-03-14 17:32:29 UTC
From: SheAnon <SA@nothing.com>
Message-ID: <NUjZd.55276$xt.22796@fed1read07>
Source record: 11914

For casual use my Kenwood TS-870S works fine for SW and BCB listening.

I think it is really more in the antenna than the receiver as far as "pulling em in". Most modern rigs have lots of gain and sensitivity. The noise floor is more importatnt in this regard. Dynamic range is an important consideration as well.

But purists would opt for the SWL receivers with synchronous detection and other features not found on Ham transceivers.

A Ham transceiver has the advantage of use when and if you have Ham license.

Also the TS-2000 (as an example) covers
TX: 10-160 m + WARC / 6 m / 2 m / 70 cm
RX: General coverage
23 cm/10 W option
Mode: AM/FM/SSB/CW

A very fine receiver indeed.
Drake going out of serious SW radio manufacture is very sad.
There is a long line of very fine Drake receivers going back decades.
The Drake R7A remains an awesome performer even to this day.
My review of the Drake R8A/B in Werner Funkenhausers WHAMLOG confirms they
are venerable radio's.

FO&A,
.
It is my understanding that RL Drake makes more from the
Grundig Satellit 800-M "Licensing Agreement" with the
ETON Corporation then from the Sales of the Drake R8B.
.
If this is true, then the Eton E1 AM/FM Shortwave Receiver
with XM Satellite Radio with the internal Circuit Design
work done by Drake may be a bigger profit center then for
the RL Drake Company then any new R8C or R9 Receivers
could be for keeping the company in business.

In article <hvgZd.55219$xt.53572@fed1read07>, CL@incognito.com says...
> You obviously don't own a dawg or have any children.
>
>

It's kind of funny, I used to have a dog that was a chewing machine. I got him on April 15th of 1985, and that night, I insanely bought a new car! In the first week, he ate a hunk of carpet about 12"x18", and the sound deadener sheet under it(asphalt and recycled fibers), the door panel on the back rear door and he also chewed off the door handle too, along with the radio wiring when the original radio died and I was waiting for the replacement. He ate furniture, carpet, wall trim, a door edge in the house, and housebreaking took forever. Finally, after destroying a lot of stuff, he finally stopped, and housebreaking followed soon after. It took about a year to get him to always poop outside!

I guess most people would have gotten rid of him, but he turned out to be my favorite dog of all, and lived to 14.5 years. I got a break with the two I have now, they chewed about 3 days, and didn't have the jaw power the last one did. Housebreaking took a week..

But he never, ever touched one of my radios, or the half dozen coaxes that he could get to, or the power cords. My cat found out that biting a live power cord isn't fun. It knocked him across the room and he screamed louder than I thought he possibly could. Other than some minor burns on his mouth, he was fine, but he never bit a cord again! If you have ever had the "Pulp Tester" at the dentist, you can imagine what it must have felt like.

They didn't need to use a drill in the movie "Marathon Man", the pulp tester was worse, and left no marks! I have had it twice, and I came very close to kicking the Dentist's ass when he touched it to the tooth a second time. The pulp tester is used to see if a tooth is still alive, and if it is, it's unbelievable. I've had some 3rd degree burns on my right hand (making my own fireworks, DUMB!!), and it was a picnic compared to the pulp tester. Nothing I have ever felt has come close to the pulp tester for sheer pain. At least it only lasts a second or so..

A friend thought I was BSing about it until he fell and knocked three of his teeth loose. He didn't go to the Dentist until three days later, and he found out the meaning of pain! LOL, now he knows I wasn't exaggerating!

BDK

My suspicion is that it's the non-shortwave-related stuff they produce that's keeping them in business...the digital TV and satellite TV products. The 800, while profitable, is probably a tiny blip on their radar screen.

She didn't like the fact that a couple of weeks after 9/11, I took
some photos well outside of the NYPD boundaries. Loafie called me a
scumbag and some other choice names, before expressing her desire to
murder me:

http://groups-beta.google.com/group/alt.showbiz.gossip/msg/feb9b82164db011a?dmode=source

There's a reason she's so despised across Usenet, and it's because she
is such a foul and offensive piece of garbage.

Sad to see yet another maker of high end receivers pull out of the
market. Especially one with so many historic ties to the SWL hobbyist.
It is as the old Petula Clark song goes: A Sign of the Times.

A very fine receiver indeed.
Drake going out of serious SW radio manufacture is very sad.
There is a long line of very fine Drake receivers going back decades.
The Drake R7A remains an awesome performer even to this day.
My review of the Drake R8A/B in Werner Funkenhausers WHAMLOG confirms
they
are venerable radio's.

--
John Plimmer, Montagu, Western Cape Province, South Africa
South 33 d 47 m 32 s, East 20 d 07 m 32 s
Icom IC-756 PRO III with MW mods
RX Drake R8B, SW8 & ERGO software
Sony 7600D GE SRIII
BW XCR 30, Braun T1000, Sangean 818 & 803A.
Hallicrafters SX-100, Eddystone 940
GE circa 50's radiogram
Antenna's RF Systems DX 1 Pro, Datong AD-270
Kiwa MW Loop
http://www.dxing.info/about/dxers/plimmer.dx

All I can say is, I'm glad the R8B was still around last year, when I
gave myself permission to buy a nice tabletop set. It surpassed all my
expectations, and then some.

Cincinnati, OH, using a Grundig Satellit 800 and a 50'
long wire with a 9:1 transformer. Still have my old
Realistic DX-440 for usage with the kids, and a
Hallicrafters S20R Sky Champion in, um, a need of
a bit of work.

I think I'd rather not torture myself right now about it. I can
scrounge up some dollars for the Hamvention, but it's far
short of the going rate for a new R8B. The vast majority of
my spare buckage is heading toward replacing our garage
doors. Kinda like that Harley commercial:

garage doors -- R8B
R8B -- garage doors

--Mike L.

I agree. Nothing for the price can beat it for SSB and Dxing. It's just that
some people are so thick they can't operate it. Not that it's hard, they are
just plain idiots.

2405. Need help with a Lowe HF-150

Newsgroup: rec.radio.shortwave
Date: 2005-03-14 19:15:40 UTC
From: thecop <thecop@optonline.net>
Message-ID: <MvlZd.22579$m62.21262@fe09.lga>
Source record: 11943

What an incredible disappointment...NOT with the radio's performance.
In some respects I believe it equals or may even surpass the Icom R75 I
recently sold. What IS a disappointment is the condition of the radio...I am
trying to communicate with the person from whom I won the auction on Ebay,
no luck so far.

Anyway, I am trying to get this radio in as new condition as possible and I
am looking for help with the following problems:

1- The frequency display does not seem to follow the tuning knob. Almost
takes a second or two to catch up.

2- the selection buttons on the bottom have to be pressed NUMEROUS times
before the radio responds. Takes 10-12 fast pushes to change mode, tuning
steps, fast or slow tuning etc.

3- There is a scratch on the display crystal (not the LCD, but the clear
plastic overlay)

4- The Volume control knob and shaft came out. I can no longer use it to
turn the radio on or off and must do that by applying or diconnecting
external power in the back !!!

There you have it. I checked the Lowe web site and they clearly indicate
that they no longer ship/sell to the United States.

I know this sounds a bit silly, but shortwave radio is my primary hobby...I
don't hang out in bars, play cards or anything else like that...after a
crappy day at work the radio is kinda' my escape...and my crappy days at
work are usually quite bad. I have one daughter in college and another
getting narried in two months, so, as you can imagine, I'm broke.

I was wondering if anyone had any advice.

Thank you so much for your time.

I don't think Drake pulling out of the SW receiver market has anything to do with the quality of the product. Every review I've read gives their products high marks. They are pulling out for the same reason so many other companies have stopped making SW receivers - declining demand. Both hobbies, SWLing and Ham radio are gradually losing out to competition from the internet and other ways of communicating and getting information. Consequently there is less demand for the asssociated hardware.

Look around at the number of SWL and amateur radio retailers that have closed in the past decade. The latest Passport to World Band Radio has advertisements for one principal radio manufacturer when is past years they had many. Signs of change are unfortunately everywhere.

I am sorry to see that Drake is discontinuing those Great Radios.I wish I had the money to buy one.I can wish,can't I? Maybe someday a Drake radio will turn up in the Goodwill thrift store I check out two or three times every week.Even if it needs repair,I would send it somewhere for repair.

Strategies vary, but if I didn't have one, I'm of the school that it's better to get a receiver that's actually made currently than be stuck with a broken one when it breaks.

The R8B is very nice but it's also a lot of money. My chief unmet need is a better selectivity against really huge signals on the adjacent channel, so as to copy 910 kHz LSB when there's a local on 920.

Unfortunately I can't null the 920 because I'm already nulling another station on 910.

The R8B does pretty well but I need more dB here.

Service will be available for years, either at Drake or through another tech.

My R7 (still one of the best dx machines ever built) is still readily serviced
by numerous technicians throughout the USA.

They are small, and fall out and get lost. Thin plastic tabs that hold
them in place may break off. Lots of reasons. Same reasons they seem
to disapper from remote controls.

Steve,
for the money, I'd much rather buy a AOR 7030+. The same guy that designed the Lowe 150 designed the 7030. BTW, I hooked up my 150 last night and the sound quality is just superb. Just a pleasure to listen to. But, yeah, better to get the AOR for the money any day.

Lucky

2418. (OT) : Being Elected the US President does NOT make you "A Royal" {The First Citizen} for Life.

CLVRMNKY,
.
US Presidents are NOT Elected for Life [.]
.
The US Presidency is the 'only' Federal Elected Official
that is Term-Limited by Law.
.
There are "Candidates" for US President.
.
There is "The" US President {POTUS} [.] {The First Citizen}
.
There are 'former' US Presidents. {While Alive}
[After they leave the Elected Office of US President.]
NOTE - Even Richard M. Nixon was a 'former' US President.
.
IMHO - Being Elected the US President does NOT make you
"A Royal" {The First Citizen} for Life.
.
FWIW - Once a 'former' US President is Dead; and is being referring
to during their Elected Term as POTUS; then the term "President"
would be Historically Correct.
.
just 'my' simple american citizen (blue collar) point of view ~ RHF
.
.

A lot of old farts can't stand the 7030 menus (deeply nested mind you) or the lack of numerical entry, which is why some people still bought the R8B even though the 7030+ is a bit better. Sure you get that IR remote with the 7030, but I never warmed up to using it. I just use the fast/slow button and tuning knob. The menus don't bug me, though once in a while the radio sounds a bit odd and then I realize the PBS is tweaked from the last time I used the radio. The Drake R8B has a button for everything.

The nice thing about the 7030 is it is small enough to consider it portable, but is of table top quality. [BTW, I saw a 7030 in Art Bell's shack on that ABC UFO special.]

I think that demand for tabletops at least has declined to the point
where used rigs can fill the need. There's still enough demand for
portables as to support three or so Chinese makers (Degen, Tecsun,
Kchibo, and a couple minor ones). I think this is primarily due to
demand in parts of the world that don't have ready access to the
internet, such as China and other Asian countries. The number of
transmitters has gone down even in Latin America, which used to be a
hotbed of SW. It seems to me that East Asian demand is what's driving
shortwave right now. Once technology to censor the internet catches up,
there may be renewed interest in SW as countries seek to block access to
subversive web sites.
>

I think SW is dead for good in the West. Demand in the future will be in
places like Asia and Africa where other means of governments reaching
their people, like TV and local radio (MW/FM/satellite) and even the
internet aren't practical or affordable.

Am I correct in thinking that these various defects were not disclosed by the person you bought the radio from? If not, then I'd think about what kind(s) of recourse you have against the seller. Did you pay for it using Paypal? If so, there might be some sort of buyer protection that applies. The defects you mention are serious enough that failure to mention them would constitute fraud.

Steve

Oh boy. Which one did you buy off Ebay, the 150 that gave away some Sony speakers with it??

As for question 1:
The tuning rate is slow on SSB mode and the sync modes. The tuning rate for the sync modes are purposely made to be slow to be able to find the "lock". The tuning step for those modes are 8khz or 1.6 khz per dial turn. Even slower for AML and AMU at .8Khz per revolution.

You can speed it up by turning the knob faster. It then becomes accelerated. Tuning rate is faster in AM and AMn. It's tune rate is 60Khz and 12khz per revolution.

So, yes it's slow rate is normal.

As for #2, I only have to press it once to change the mode. You mean say it's on AM, if you press the mode buttons, the display doesn't show the change in mode from just one press?? If it needs to be pressed several times, something is wrong. You have two mode buttons to go in opposite directions. You mean both buttons respond this way??

For #3. You can unscrew the front plastic plate to clean off the back and remove any dust or particles. As for the scratch, try some cleaner that "fills" cracks and scratches for glasses. It might work depedning on the scratch. Be careful cleaning the back of the plate as all the printing is on the back, not the front.

And for #4, Oh shit..... Get your money back.

Lucky

With the end of Drake shortwave tabletop radios, the question bears asking again: is shortwave dead? How much longer till the only thing you hear on HF is static and the occasional mil comm? I think that DXing, at least, is dead-most people don't even bother QSLing anymore, and fewer and fewer stations offer QSLs. It seems to me that most people just don't enjoy the thrill of seeking out faraway stations on any medium, be it SW, TV, MW, FM, they just want to listen to their favorite stations. Ham radio is gradually dying off, as today's hams get old and die there's nobody replacing them. As for SW broadcasters, they seem to be cutting back their hours and frequencies, all except the kooks in the US. VOA is being terminated, DW has been cut back dramatically, the BBC has cut out some regions of the world and operates with reduced times to the rest, RN has suffered deep programming cuts. SW radio makers are going out of business or switching to other types of products. I give SW 20 years tops before nobody is listening anymore.

This appears to be normal. Also, there is about a 50mSec settling time for the synthesizer if you tune in the fast mode by several MHz.
>
> 2- the selection buttons on the bottom have to be pressed NUMEROUS times
> before the radio responds. Takes 10-12 fast pushes to change mode, tuning
> steps, fast or slow tuning etc.

These things can possibly be cleaned. I just replaced the mode switch on my unit. I believe that Digi-Key has the switch assemblies that you might need. I will find out the part number later this week. I used another switch assembly (same type, but square pushbutton) and used the keycap from the original switch. I did, however, use the new contacter and spring assembly. It takes about 15 minutes to change each switch. Make sure you have a hot soldering tool to do this one; the plated through holes have a tendency to suck the heat from low wattage irons.
>
> 3- There is a scratch on the display crystal (not the LCD, but the clear
> plastic overlay)

0.7 micron lens polishing compound will clean this up. Be advised, though, that the crystal seems to have a matte finish so you might end up with something more shiny than the original crystal.

>
> 4- The Volume control knob and shaft came out. I can no longer use it to
> turn the radio on or off and must do that by applying or diconnecting
> external power in the back !!!

This control uses a collet type of knob.............this means that you must first remove the cap from the knob assembly. Once this is done, there is a Phillips type of screw that you must loosen. It would appear that somebody tried to pull the knob off and removed the shaft in the process.

E-mail me directly if you really get stuck, and I will be glad to walk you through some of the repair process. I just got through repairing and aligning my own unit. It is a shame that too often, these things only come up for sale after they no longer work properly. Don't worry.....your unit can be restored fairly easily.

Pete

Dead???? That's too strong. But it is on the far side of a bell shaped growth curve. Although the the hobby is fully mature, there is still plenty to enjoy. Just hold onto those high-end receivers 'cause fewer companies are making 'em!

I look at it this way; did most tube buffs think SW was dead
when Hallicrafters and Hammarlund disappeared? No.

And it isn't dead yet, either. I think it a mistake to rule
out SW, just like some people ruled out AM when FM Stereo
came along. There's a niche for SW, and while it doesn't
have the grab of the WW2 and post-war eras, it's still there.

Good points all of them. Yes, I think if you have a favorite high-end table top, hold onto it because there are only a few companies making them any more. I'm not sure shortwave will prove to be a viable alternative to the net in China. The governmental net controls are far from perfect right now. I see a gradual loosening of controls on society in general and the net in particular as China becomes more secure in it's position as a major economic and political player.

You know Pete,

I'm wondering if the frequency really needs a sec to catch up. The frequency is actually changing in between the tuning rates. So you're not seeing those steps displayed but you can hear the difference.

I'm glad you can help this guy out Pete. I feel badly for him. Stinkin crooks on Ebay. I never pay for a radio without using a credit card. This way you have some kind of recourse with these bastards.

Lucky

I sometimes use my Kenwood TS-450S and it works great. I use a G5RV with
it. I have an Icom 706MKII but haven't played with it on SW yet, I suspect
it's also excellent on the SW bands.

If you're worried about there being nothing at all on shortwave, then you should stop worrying immediately. SW represents a big chunk of the EM spectrum. There'll ALWAYS be someone looking to take advantage of that amount of bandwidth. You can trust me on this: someone will ALWAYS find a use for it.

Mind you, there is some possibility that we'll be fools enough to allow something like BPL to destroy broad swaths of the electromagnetic spectrum. In that case, all bets are off. However, setting aside the potential for such a disaster, someone will always be doing something on shortwave.

As for whether the programming and content on shortwave 20 years from now will be programming and content that interests you...well, that's another issue entirely.

It's very hard to envision what shortwave will be like in 20 years, but that's part of what's fascinating about it. I think the content you'll find on broadcast AM and FM, as well as TV and satellite will be pretty much the same sort of commercially driven crapola that you find now, with small variations in theme here and there. With shortwave, though, it's not so easy to predict. Shortwave, I think, is wide open and spacious, like a frontier. I for one can't wait to see where it goes.

Steve

You've got a good point there,
Lucky.....instead of synthesizer settling time, he is talking about an apparent latency with the display. I understand what you mean.
I feel sorry for this fellow, too. It's a shame that some of these "mint condition" things hit the market at the prices that they do.
It could be possible that the seller didn't know the actual condition of the unit, but the broken volume control? I don't think so. The wear on the switches is normal, but they aren't a big deal to replace.....still, I understand the seller's disappointment.

All this talk about such a sad day, the R-8B now discontinued. I say: good riddance!

The death of the R-8B was a slow and painful one. The price crept up to $1500 and it lagged behind the DSP technology of the last five to ten years. It's platform was based on the R-8 designed around 1990. It was almost a joke that such an expensive radio had a cheasey plastic tuning knob with no "feel" whatsoever.
The radio was built like a Muntz TV set, lacking adequate shielding. It's RF front-end was overloaded with a mulititude of internal birdies. My R-8B had a hunk of printed circuit board crudely cut and mounted behind the display board....a very cheap and ineffective effort at shielding. Drake service and its service manager Bob Frost were in a total state of denial when I complained about the internal birdies, some hovering at S-9 in the MW Band.

I dumped my R-8A and 8B on ebay years ago. I would have loved to keep them, but they just were not up to the standards of my (keeper) Japanese sets.

I am keeping a Drake R-8 (the original) as the best example of the series: no birdies, no sync hiss, a real metal knob......

Coming in fairly well. Needed the double side band on the Lowe 150 to bring it in and hold an audible lock.

I see where this DSB comes into play now.

Lowe 150 outta Miami

One other point... Drake never made an R-8, an R-8A or an R-8B.

If you have ever looked at the front of any one of those sets you'd soon be able
to see that they are the R8, R8A and R8B.

You know, I'm amazed on how well the double lock works on this radio. I was getting bad fading on the BBC on 5975 till I caught the lock on it.

Yes the R-75 is right up there in sensitivty.

Geez, this is depressing. I saw this comming but I guess I was in denial to an extent.

I bought a new one from Universal last year and I love it. It's a fantastic radio.

I've got a JRC NRD-545, but it mostly collects dust while my R8B gets most of the use in my shack.

I can't believe this. On the day we loose the R8B the long fabled Sat. 900/E1 actually gets a real ETA (that includes BOTH a day and a month) and a price tag.

It looks tempting, but I'm not about to be a beta tester for the E1 considering all of the trouble they had getting the Sat. 800 off the ground.

That "deliberate confusion" as practised by some just might be a means of protection because apparently Mary Ann may try to cause trouble for Usenet posters in *real life*, e.g. contacting their employers, local law enforcement officials, schools, ISP's, etc. This is apparently in response to some who have simply disagreed with her on technical matters or because they have referred to her by one of her common Usenet nicknames...

> Maryanne is an avid SWL from Atlanta who contributes regularly to various
> online and print publications centered around Shortwave. Most notably she
> forwards press releases and the schedule of Voice Of Russia on a regular
> basis to the groups and clubs she participates in. You can find reports
> from her in Monitoring Times.

Big deal...is this why she has apparently claimed to be a "journalist"...???

[IIRC she has also posted to BBC, _New York Times_, etc. message boards, then she has apparently claimed that these outlets have "published" her "articles"...when she was going on once about articles she'd claimed she'd written for "internet publications" and I asked her for URL's/cites there was no response from her...go figure. Does she not realize that when folks make such claims in public that others just *might* check google or nexis/lexis to corroborate their claims...???]

> The immature males who can't accept a woman as a DX'er in their hobby
> ridicule and put her down because she can be quite obnoxious at times, is
> tall for a woman, horrendously top-heavy and preferred to wear crew cuts.

Has naught to do with her hobbies, people object to her behaviour on Usenet...

[And she should know that by posting her pictures, "pageant" awards, personal details, etc. on public forums and the internet that some of her detractors just *might* use this info to ridicule her. 'Tis a common tactic on Usenet, even a child has no trouble understanding the concept.]

> Under that exterior, which has shed a large quantity of poundage, and
added

> an inch or two of head hair in the last year, she has a heart of gold.
>

<cough/>

Why bother? Her behaviours on Usenet haven't changed one bit from what I
can see...

[my above comments are simply my personal opinions..."YMMV" of course...]

I forgot to mention that one of my reasons for the question was that I was going to look at an older Kenwood TS-2000 that followed me home. Afer struggling with all its functions I finally got it to do what I wanted, that is after studying the manual, you can't leave without it, hacking doesn't cut it. Now to check it out.

Date: 2005-03-14 23:26:14 UTC
From: John Schneider <thecop@optonline.net>
Message-ID: <QapZd.22588$8e4.867@fe09.lga>
Source record: 11858

First...thank you Lucky, Steve and Pete for taking the time to respond to my plea for help !!

To answer some of the questions: Unfortunately I did not bid on the set with the speakers as I knew it would be beyond my limit :{ I can turn the tuning knob 6 or 7 times with no change in the frequency display I may have been responsible for the fiasco with the volume control shaft, but I must admit that it took VERY little in the way of pulling!

Insurance on this item was not an option The auction did not offer a picture of the radio, but it wouldn't have mattered much as the defects are internal. The scratch on the display is something I can live with, but I believe it should have been mentioned.

Here is the link:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&rd=1&item=5756065429&ssPageName=STRK:MEWN:IT

Anyway it looks as though I am going to be on a hunt for the parts I need and Pete has, most generously, offered to help when I need it.

Thanks again to all.

anyway....thanks to you all....
i bought a new icom r-75 on ebay for a great price and already ordered all the kiwa mods. craig also gave me a deal here as well. when i told my wife i wanted to bid on the r8 too, well, you know....so i got the whole thing for $500usd.

in the end i wanted the adaptive dsp on-board. i know the r-75 IF fltr(s) and adj chnl performance are not as good as the r8 and the r-75 sync det sucks without the kiwa pll loop filter mod. the sensitivity specs are damn close and only slightly better than my r-1000 which i have decided to keep.

it sounds like dxace and others have owned both, and i probably screwed up big time...someday, i hope to get an r8b and compare station by station....but i'm sure they're right...

what is wild is that there are so many subjective and definitive comments when performance parameters like selectivity/sensitivity/bandwidth/attack times/etc...are matters of documented performance. you'd think there would be some clear criteria based on the specs as the receviers have become more sophisticated....not so....

thnx again...for those dedicated to the r8, chalk it up to stupidity on my part and you already know i'm gonna regret it...for those who favor the r-75, chalk it up to slick marketing...after the kiwa mods, i've read nothing but glowing comments.

Duct Tape the batteries in.Which reminds me,I am going to the Home Depot store tomorrow for house paint and other supplies and I need to buy a roll of Duct Tape so I can Duct Tape my broom to one end of my long aluminum telescoping handle and use some warm water with bleach and detergent and get that mildew off of my house before I start painting.I will then hose off my house with my water hose after I demildew it and then I will Duct Tape a paint roller to my long aluminum telescoping handle and paint my house.I won't even need to get on my roof,I can reach those high up areas standing flat footed on the ground.A man needs only two tools in life.If it moves and it shouldn't,use the Duct Tape.If it doesn't move and it should,use the WD-40.

Probably the best AM DX receiver even today is the R-390 made by Collins or Hammarlund. Hollow state, an alignment nightmare, but the best receiver I have ever used. DSP is just another way of doing things, and not, in every case, the best.

2477. Re: FRG-100 FM pickup problem - solved (long)

Newsgroup: rec.radio.shortwave
Date: 2005-03-15 00:05:20 UTC
From: fcathell@msn.com
Message-ID: <1110845120.028967.85520@z14g2000cwz.googlegroups.com>
Source record: 11865

Believe me this problem drove me crazy for a while. My QTH is essentially "bathed" in the FM rf from 3 100 kW FM towers that are within a 6 mile radius and line of sight with the house. This problem seems to only occur in receivers with a 45MHz 1st IF. My R72 has a 70MHz 1st IF and no problem at all. My previous Lowe HF-225 had the problem as does the FRG-100. I've literally spent days on and off working on this FM "bleed thru" problem and it seems to be associated strongly with the fact that the FRG's power connector has its ground (minus) pin going thru the metal rear panel to the pc board ground trace as opposed to connecting directly to the rear metal panel. This pc ground connection point is just about 1.5 cm from the 1st mixer ground area and I suspect this is the problem. The new power connector I added greatly attenuates the pickup even without the pi filter. I added it anyway and it helped additionally but not as much as the ground entry change. I also sanded the solder mask away from the pc board to chassis ground connection under the corner mounting screw in this area and solder plated it. This also helped. Unfortunately the external speaker and low level audio output jacks are grounded the same way and inject the FM crap also if you use these connections. I agree it's a common mode problem but once the signal is past the chassis barrier it more than likely become partially translated to differential mode noise and permeates the pc board ground with fractional microvolt levels, just enough to cause trouble in that first high gain mixer!

This is the kind of stuff that makes me hate electronics despite having worked in it for 30 years!

They break or get lost easily. My Degen 1102 has a battery cover that's
attached to the radio by a hinge-slide it out and lift it up, less
potential for breakage. Of course, what one should do if it DOES break
is unclear.

I'm relatively new to the hobby. I think you could make the case that shortwave listening is on the decline in the US (as is shortwave broadcasting to the US). But in many parts of the world, shortwave is the only way to receive international news and content. Shortwave is also a huge way for third world countries to keep their populations informed. So there will always be something to listen to, for many years to come.

Apparently tabletops have been a no profit part of the business for a while. The best were built in the 1980s. (Of course, one could say that the true best ones were from the golden era of tubes, but I'm talking about modern, digitalized ones.) Then starting about 10 years ago the quality of both design and build started slipping. I figure it's around this time that demand dried up. I suspect that Drake has been trying to prop up a major loss in tabletops by skimping on design and build quality, keeping them going for old timers' sake. They simply couldn't do it anymore. From what I've read, Yaesu is doing the same thing-their current set is far below the Frog 7700 and 8800 (I own an 8800 and am very happy with it). I suspect that Yaesu will pull the plug on tabletops within the next couple years, and that AOR will once again pull the 7030 from the US market. When that happens, expect tabletop prices on ebay to soar.

The only thing that will "loosen" anything in China is when the CCP is hung
up on the rafters.

As Pete mentioned, this is a collett knob- attempts to pull it off will ruin
the pot.

One other thing to watch out for - do NOT use non rechargeable batteries AND
the plug in power supply- this will cook the alkalines and cause them to
leak. Of the 4 RX I have had, only my current one has a pristine battery
box.

I really like the 756 PRO I bought used a few weeks ago. The MW has a
bit of attenuation....but that is ok except for weak signal daytime use.

I think they are a real bargain at around $1100 - $1200. No SYNCRO AM
however. I think the 746 PRO does have SYCRO AM though.

www.ettore.com My aluminum telescoping pole (it's made in China,so the label on it says) telescopes from 8 feet to 16 feet.I bought it at the Home Depot store about a year ago and it has a plastic thingy on one end of it so I can screw the handle of a paint roller on there.Now,if I can find a scrub brush thingy at the Home Depot store tomorrow I won't need to use any Duct Tape at all.I just now remembered something,I do own two wide push brooms that have the handles that screw into the push brooms and I also have a push broom that has the handle screwed into it and it has a narrow broom on it because I once found that one at a junkyard years ago and I keep it in my raggity old 1978 Dodge (Al Bundy) van for when I want to sweep out my van.I will just remove the handle on that push broom and screw the push broom on to the plastic thingy on my Ettore aluminum telescoping pole and I will be all set to demildew my old house.Good thinking,eh?

I'll have to echo John's and Ken's sentiments on this one. I have a friend who lives close by and we have compared the 756 Pro II with several high end receivers. Other than some attenuation on mw and lw, it is superb as a sw receiver. To my ear, the RX-340 sounds better, but the 756 is as good in pulling in the tough signals. Of course, many will not spend the money for a transceiver if they do not have an amateur license, but many will. The colorful display is something to see. Lots of information in that display!

Having owned many, many Drake receivers over the years, the news about Drake getting out of the receiver business is not good news. But, we should have known it was coming, shortwave receivers are but a drop in the bucket of the electronics business.

running dogg <run@ning.dog> wrote in news:42362bd9$1_2@127.0.0.1:

Visit the Yaesu homepage and look at the current offerings. The FRG-100 is no longer listed. I do believe that I have seen articles discussing the discontinuation of this superb receiver.

Can you say Palstar? Hopefully they will continue their fine R30 and Icom will continue the R-75, but who knows. Too many radios are being discontinued at nearly the same time.

Fortunately, HAM transceivers allow the same reception capabilities and offers transmission for those properly licensed. I don't believe that HAM transceivers are going anywhere soon, so there will be an abundance of superlative tabletop models for SWLing for years to come at the same price of Shortwave only tabletops.

For example, the Yaesu FT-840 transceiver. This is a fine (ahem, according to Yaesu, entry level or good as a "second" transceiver. I find it perfect in itself, no need for all the bells and whistles) radio, though I had to buy the AM filter separately, without it AM reception filtering was far too narrow.

EHam Reviews of the Yaesu FT-840:

""Tag Line Sent In Of The Week, Month, Whatever...
"I am confused. I thought that streaming internet audio and satellite radio was available everywhere and at anytime. Isn't real radio simply obsolete....like smoke signals. I am so confused." re: Singapore: 6,000 Radio Sets Collected For Tsunami Victims." "

You know that you've been living in a civilized nation for too long when you are capable of making an asinine statement as above. Yes Virginia, not every nitwit in the world is carrying a laptop computer, an IPOD, or whatever. Sheesh. These people imagine the world's poor people buying

computers, subscribing to satellite services, and maintaining ISP connections. All the while looking for the bodies of their deceased relatives and friends. Common folks, there are more than 6,000,000,000 people on this planet, not everyone lives like you. Most live in squalid conditions, the possession of a radio to hear local and worldly events and music is probably quite a pleasure.

And don't believe that the desire to go to the digital modes is for your pleasure. Think about it, the satellite services will ultimately be controlled by the Government and, sooner or later, once your hooked, by the advertisers. Shortwave is a thorn in the side of most Governments, since other countries, even on a modest budgets, can get the word out.

Satellites have a footprint, you need to be within that footprint to receive the broadcasts (more or less, I realize that part of the footprint is the intended reception area, i.e. the supported area)

If a show displeases the government covered by the footprint, and the government has the authority, they will simply order the show removed from the satellite. The U.S. has cancelled an Iranian broadcast to America, labeling it "intellectual terror". Easy enough. You no longer get to make up your own minds, you listen to what the Government wants you to hear.

Perhaps more utility listening, more DXing for those elusive signals, Pirates and Spies may be a way to bide your time while the shortwave broadcasters come and go (mostly go right now, but who knows in the long run).

Dr. Artaud.

I am sorry to hear of the demise of the R8B. I have an Icom R-75, love it, and wouldn't part with it. But I still think the Drake was the best receiver I ever had a chance to use, though briefly. A wonderful machine.

Somewhere down the road, some company, likely an extant one, but perhaps a "new face", will come out with a receiver that will quickly become the new benchmark in the field. It will be interesting to see what this future receiver will be like. I honestly think that's inevitable. Though the market for high-end receivers is getting smaller, it is not going to disappear anytime soon.

I also think - in fact I'm willing to bet on it - that when that receiver appears in the marketplace, if people thought the R8B was expensive . . .

Tony

Indeed it is Steve. Having owned the R8 and R8B (I passed on the R8A) and having owned an SPR-4, 2B, R4, R4A, R4B, R4C and R7 over the years, I can say without a doubt, R. L. Drake was a leader in manufacturing excellent receivers. I do think however, the R8B was the best of the line with reservations. That tuning knob and the lousy mechanical encoder turned me off. Of course, that didn't preclude me from many pleasurable hours sitting in front of that otherwise fine receiver. Having said that, it is a sad day for shortwave enthusiasts when you think that the Japanese manufacturers haven't ever produced one that didn't need agc, filter, synchronous detector and audio modifications to make it perform. I realize that we all had to modify our beloved hollow state receivers over the years, but the Japanese have led the free world in crappy audio, filters and agc's for decades. Shortwave receivers are but a minute drop in the bucket of electronics. If and when a manufacturer can sell shortwave receivers in the numbers such as dvd players, tv's etc., we will see this sort of thing happen.

Just my 2 cents.

Les
I see you have a R274C. I have a R274D/FRR by Hallicrafters with what
appears to be a factory for SSB with a set of three Collins mechancial
filters and 24 tubes. Ever hear or see of another as I'm looking for more
info?
tnx

Probably thrift stores and pawn shops. I got a Superadio II for $7 at "Cash Convertors," a sort of second hand store but they don't do loans like a pawn shop, and also a TRC-434 CB base station, which I bought for $30 Canadian and which went for $47 US (about $25 profit in Canadian $$). If you were willing to pay an employee at such stores a % for leads, you could probably make a buiness out of it.

I wish MFJ Enterprises www.MFJEnterprises.com would start building shortwave radios and other kinds of radios too.I would certainly buy one or two,if I could afford it.I can't speak for the performance of their products because I don't own any of their products,,, yet.I am going to MFJ Enterprises in a couple of months (they are just up the road from me,so to speak) and buy one of their antennas.I think their products do look great though.

Degen is already talking about a high end receiver, much more high end
than their usual $50 portables. It will probably be marketed to the
West, since it will likely cost much more than anybody in Degen's
traditional market (domestic China) will be able to pay. That indicates
to me that Degen must have pretty strong sales of its portables like the
1102 and 1103 in the West.

The Kiwa sync' mod' makes the R75 sync' comparable to that on the
original R8 but not the R8B. The latter is how a really good sync'
detector should work.

You're going to love it once you get used to using it and it's features. I guarantee you'll haven't heard SSB and Hams this good till you've tried the R-75. And the ECSS is just superb. Hook a good antenna to it and you're going to be up late nights :)

Check out Phil's CookBook in the Yahoo newsgroup files section. Great place to start besides the manual.

Have fun
Lucky

sdanie...@nyc.rr.com: I'm curious: How good the R-75's sync is after the Kiwa mod? Is it comparable to the sync on an R8B or one of the Lowe receivers?

mike0219116: I used to have a Kiwa modded R75 and I currently have a R8B.

The modded R75's synch cannot hold a candle to the R8B's synch. It's superb.

Jim: Don't forget that BBC Webcasts for free also. Go to
http://www.bbc.co.uk/radio/

No static, no fading, no bullshit. Just crystal clear audio. You
can listen to Radio 1,2,3,4,5,6,7 as well as World Service.

And people wonder why shortwave is dying!

Jim

mike0219116: Good luck listening to the BBC over the internet during
the next terrorist attack, or other similar crisis. The internet was
overwhelmed on 9/11. I got most of my news that day from the radio in
my office becuase the internet was useless.

Icom currently seems to have the most tabletops on the market, if
Passport is any indication.

> price of Shortwave only tabletops.

I believe that in the US only licensed hams can own transceivers. The
ham community is pretty tight fisted with their existing rigs, many
making you show them your license before they let you buy their rig.
This is apparently done to combat pirates, which the hams view as
threatening their spectrum (although since hobby broadcasting is
illegal, it's hard to see how).

It also follows that those people can't afford a $1500 radio, but CAN
afford a $50 Degen or Tecsun. Gee, I wonder why tabletops are being
pulled from the market while cheap China made portables are showing
strong sales? I DO wonder what the most common SW radio is in the third
world. I've seen footage of Iraqis listening to old European tube SW
radios. The movie The Killing Fields showed the camp escapees listening
to such a radio. I would figure that probably old Grundigs, Telefunkens
and Phillips's are the most common SW radios, except in the old Soviet
Bloc where the state made radios would be the most common.
>

YOU try explaining this to our resident XM Satellite Radio owning
"leftist". I've tried, but I'd rather beat my head against a brick wall.
He doesn't seem to get that if the BBC pissed off George W. Bush that it
would disappear from satellite radio.
>

> get to make up your own minds, you listen to what the Government wants
> you to hear.

And then the government will force through BPL not to give people better
internet connectivity (it doesn't) but to use as a blanket shortwave
jammer. And also to force the public to buy expen$ive digital TVs and
expen$ive satellite TV subscriptions to go with them. Of course, the
government will get its kickbacks from all this forced purchasing of
$3000 TVs and $600/yr satellite subscriptions. I don't think it's an
accident that the BBC canceled its NAm service around the time that W
cozied up to Tony Blair.
>
> Perhaps more utility listening, more DXing for those elusive signals,

Well, the small European stations are going away, but the big ones (BBC, RN) mostly aren't. The BBC still broadcasts to Mexico in English, probably their way of getting around the UK Govt order that they stop beaming to the US. Only DW has totally canceled all broadcasts to the Americas.

No problem John. In LSB, USB, and ASL and ASu you can turn it a few times
till it changes. Yes I remember that auction and wondered why no picture.

How did you pay him?
Stay in touch with Pete. He knows his stuff and can help get it back to good
condition.

Dale,

I just bought a 8 way niCd battery charger off Ebay. I won't even recharge the batteries in the radio. No way. My boxes are clean. I hear people have been using regular NiMH batteries in it. They leave them in recharging continuously since they recharge more slowly. I wouldn't try it.

No, the TS 2000 is a current model, no relation at all, and blows away
the not so great R2000 in every way, except for audio quality, maybe.

If the US government wanted to, they could cut off certain websites or audio/video feeds during and after the next crisis. In fact, they could conceivably cut the US off from the rest of the internet, or put a heavy filter on it like China does. The first thing that King Whatshisface of Nepal did after reimposing dictatorial rule was to cut off the internet feeds to his country. He also cut the phone lines. Most Americans that I've talked to agree that martial law in the US is only a terrorist attack away. In the event that happens, you will see how much the US govt can control information. No more BBC WS on XM and Sirius for David. No more foreign audio and video feeds over the internet. Most Americans get their news from TV, which already just reports the Bush Admin's talking points along with a smattering of "investigative" reports to make it appear that they're independent. In the case that the US govt really clamps down, shortwave will become really, really important. And all ebay auctions for SW radios will mysteriously be pulled. Get yours now while you still can. Americans really don't know what it's like to live under absolute military dictatorship, especially that of Bush. They'll soon find out.

It's been a long time since Thorpe came out with a new design. Thorpe designed the Lowe HF-150 and the AOR 7030+ receivers, among others, but these receivers have been around for quite a while now.

Does anyone know what Thorpe is doing these days, or why we haven't seen a design from him for so long? I tried to find information about him on the internet, but no luck.

Look at eHam reviews on various MFJ products. Seems folks either love them or hate them. I use two of their tuners, an MFJ-962D (1.5kw) manual tuner and MFJ-994 (600w) ATU "IntelliTuner". I like them both, and have no complaints about their performance.

I don't know.I first heard about Nichols being in custody when I was
listening to Supertalk Mississippi last Saturday on either the top of
the hour or bottom of the hour Fox news report. www.supertalkms.com
I was listening to Kim Komando's www.komando.com Saturday mornings
radio talk show just like I always do on 97.3 FM on my AM/FM radio.Then
I tuned in Fox news on my tv set.

Absolutely! That's why I bought a Yaesu FT-920 some years ago for TP mediumwave DXing and tropical bands reception, and found it very good for receive-only. With INRAD filters installed it was even better.

My current ICOM IC-756Pro is a great alternative to a tabletop receiver and a fine used value at their current worth of $1200-1400. The receiver is quiet, the DSP "brickwall" filters are excellent, and the useful spectrum scope is a helpful tool and fun to use. I don't care if I never use the transmitter portion... the rest of the radio is a great value for the DXer.

Richard Hillier at AOR-UK told me a couple years ago that John Thorpe had long since moved most of his electronics design efforts into other projects, like high-end audiophile stereo equipment.

There *was* the "JT-2000" all-DSP receiver planned at AOR, a commercial-grade "black box" rig which John Thorpe was supposed to design. As recently as 2004, AOR-UK claimed it was still going to happen, but I've lost any hope in this one appearing on the market. I think a prototype was displayed at Dayton 2000.

Will the real John Thorpe please stand up and take a bow? Your HF-series Lowe receivers and AOR AR7030 receiver will be forever remembered and respected in radio history.

That would have been cool to see! I remember one of the days when I stopped over at the Rockwell Inventory Disposal store. They had a bunch of these frequency standard crystals (not to be confused with the crystal filters) in vacuum tube types of envelopes. I bought a few of them and gave them away as gifts to some of my friends. I've still got a couple of HC-49U crystals in glass envelopes. One of them is 3.0000000000MHz. I'll find a use for it someday.
I like those Racal receivers.....for the longest time I was looking for a 6790, and Ken Ganinno, down in St. Louis had one available. I had a KWM380 that was in pretty good condition so we made a trade, and I haven't looked back. Last time I spoke with Ken, he was pretty happy with the '380.

I'll be glad to help you anytime, John.....I have also learned
the brutal lesson in disappointment!
I will also extend this help to anybody else on the NG that has any
questions. A couple of weeks ago, I was really stuck when it came to
repairing this receiver but Tony, over at Lowe UK was super helpful for my
getting this unit up and running. Also, I have to publicly thank that great
fellow in England for scanning and sending me a copy of the service manual
for the HF-150. I couldn't have done it without either of their help.

I just got a real nice Drake R7 and was trying to learn whatever I could
about it.
I came across this post from 1999. today this package would go for abut
$1500, yet it lasted at least several days !!! I wish I had gotten this kind
of a dream deal on my R7 !!!

~~~~~~~~~~~~~~
Drake R7 Serial #00002812

Includes:

NB-7 Noise Blanker
AUX-7 Board
MS-7 External Speaker
Sherwood SE-3 Mark II
Drake 4245 control knobs
Original manual and Drake box.

On 12-21-98 the radio was serviced by R.L. Drake and underwent an
alignment at a cost of $215.22. Operationally and cosmetically this
setup is a 9 out of 10. Beautiful radio. Too many radios and need $
for home stereo.

$850 plus shipping CONUS only. No trades. Serious inquires only.

Regards,

Victor Trucco
KD6PTO
Portland, Oregon

In 2000 I traded an almost new, in box Sony 2010 for a Yaesu FRG-8800. I had bought the Sony a year earlier for $200 (a BIG STRETCH in 1999). I found that the Sony didn't meet my listening needs at the time (I was into chasing pirates, which broadcast using SSB, and the 2010's lack of a tunable BFO was frustrating). So essentially I got Yaesu's best model for $200. I believe the post I saw originally asked $250 for it. I still use the Frog every day. I have a Degen 1102, but the Frog works better with poor propagation. Try getting that sort of deal today! Ebay has essentially inflated prices drastically. OTOH, you can get a Chinese portable for $50 from Liypn.

Apparently people hold on to their Frog 8800s. I found a grand total of
THREE on ebay, and two of those were nonworking parts radios. The other
auction still had nine and a half days left to go.

Back in the late 1940's,my brother (he was eight years older than I) came home with a shortwave radio.I remember him putting the antenna on the roof of our house.He tuned in and folks around the World were talking about the aftermath of World War Two.By the way,he was a Helicopter Mechanic at Vung Tau,Vietnam in 1964,the same year I was at Shannon Wright Compound www.114thaviationcompany.com in 1964.I was at Shannon Wright Compound for about three months and then I got transfered to Tan Son Nhut (same Company,114th Aviation Company) for the remainder of my Tour Of Duty in Vietnam. www.tsna.org It was his second Tour Of Duty in Vietnam following a year in Germany.Before all of that,he was a U.S.Army MP.

A week or two ago I read on the internet somewhere (if it's on the internet,it's got to be the truth,eh?) that some U.S.companies are interested in setting up shop in some East European countries.There are already some U.S.companies doing business in some East European companies and have been doing so for many years,but perhaps more U.S.companies might start doing business/manufacturing over there.Perhaps some "Drake" radios might start being built over there?

Us webbys can click on Clean up in our webtv email in boxes and the spams including emails that are not spams will appear with little empty boxs to the left side of the emails and we can click on Check all and then the same page will appear with all of the empty boxes with check marks in the boxes and then we can click on Discard and delete all of the emails.Or we can put the check marks in whichever emails we want to discard and then click on Discard and do it that way.We can do that with our wireless keyboards or with our hand held remote controls.I never click on any spams,I always delete them.I never use my computer for emailing and I never will.I can very easily live without emailing.In fact,I wish my computer had NO emailng capability whatsoever.If anybody can design/invent a computer that can do everything computers can do but impossible to use for emailing,emailing in or out,that person or persons will be the richest person or people in the World,Guaranteed!

For whatever reason I skipped out on the R8A as well. The only one of the other above receivers I never owned was the R-4C which I don't think was noted as being a good SWL receiver.

I also have had a few SW-4A's.

"If you were willing to pay an employee at such stores a % for leads, you could probably make a buiness out of it". Exactly what takes place! Keep your eyes and ears open when you spot them. You'll soon catch them working their underhanded skills. They're usually tight lipped about their transactions but once in a while you'll hear a newby to the trade bragging about deals they get and how much profit they made on this or that item. These ones usually disappear quite quickly... why and where to, I don't know. I've seen this happen many times at a few Good Will(Thrift) stores. 'Very protective of one of their major sources of profit.
You've probably noticed some of the new "antique hunters" with the Indian Jones hats and spawned by the show of the same name, scouring the thrift stores. The days of finding something of value for next to nothing in these places are limited. But then you can always still buy the item at usually grossly inflated prices at the flea markets etc. ..... if you choose to do so.

The government has created a situation much more insidious than martial law already. They have brainwashed the people and have passively sedated them. The people have been subjugated and don't even know it.

No need to censor anything; just create an alternate reality in the mainstream media. Kind of like that ERD that obliterates people but leaves the buildings intact.

Vigilance!

The niMH are fine- I've had a set in my latest 150 for 2 years now-
continuously trickle charging.
As before, the problem is when users place alkalines in the battery box and
then use the AC adapter. It would have been nice if Lowe had included a
charge/no charge switch on the rear apron.

Yeah, if there was going to be another production run, then Universal wouldn't have felt the need to stockpile them now. I'm afraid the R75 is history.

Source record: 12098

I asked my longtime friend and SWL mentor, A.E. Neuman what he thought and as always he said; What, me worry???

I'm not worried that it's all going away tomorrow, because things won't change all that fast. There will be plenty of stations to hear for quite a while. But it is impossible to ignore how the shortwave broadcast industry is changing and how those changes impact the swl hobby. The number of countries switching to more efficient ways of getting their message out to the world is steadily increasing. We continue to read about satellite rebroadcasts and the internet replacing expensive broadcast facilities. The number of stations listed in the frequency section of periodicals like MT is visibly smaller than it once was. The number of companies producing and retailers selling short wave receivers is way below what it was 15 years ago.

Listening to noisy, crackly shortwave broadcasts subject to the whims of propogation is fun for hobbyists, but it isn't a particularly attractive alternative to CNN, webcasting, satellite radio, cable tv, email and the internet for lots of people. By any measure the number of alternatives to hf broadcasts continues to increase.

Me, I'm going to continue to listen to the shortwave bands as I've always done. Because I have enough portable and tabletop receivers I doubt that I will be in the market for a new unit for several years. An even when the time comes, I suspect that I will look for a good used high-end receiver since there are so many for sale. Decisions like mine combined with smaller numbers of new swl's entering the hobby means lower demand for new hardware and more companies like Drake dropping out of the market.

2611. Logging Program

Newsgroup: rec.radio.shortwave
Date: 2005-03-15 14:55:36 UTC
From: Rick Abshier <rga50@sbcglobal.net>
Message-ID: <IHCZd.5410$ZB6.2652@newssvr19.news.prodigy.com>
Source record: 12156

I have a lot of SWL records and QSL's going back to 1966 (with a Hallicrafters S-120!) and want to put all of this into a logging program like I did with my amateur radio information. I did a quick search yesterday and saw that there are a few programs that will do this and also generate reception reports.

I found one called WRLog (http://www.paraclete-is.com/) for $14.95 and a similar one called Dxtreme Reception Log for $49.95 (http://www.dxtreme.com/). Both seem to do what I want them to do, but one is much more expensive.

Has anyone had experience with either of these Or, is there one that is a favorite with the folks here? It's going to take a long time to input all the information and I want to make sure that I get the right software. Thanks!

Rick Abshier, KF9SQ

Big sellers usually have several sources out looking for them. Those sources are scouring the same ebay auctions, estate sales and in-person auctions you and I go to, so if you see something you want jump on it before someone else does.

Ebay is the ultimate marketplace and is pretty effective at matching buyer and seller. Consequently it is getting harder to find "steals" online - there is too much competition. Absent finding a bargain you and I will just have to be willing to pay the going price or pass.

Very glad that I bought mine 18 mos ago from Gigaparts - I absolutely love this radio. Now that it is being discoed, I don't think I will ever sell it. Replaced an FRG100 with it and am very pleased with the performance right out of the box. IMO, best shortwave out there for its price...

Rice may offer to sell F-16s to Pakistan, India

By Anwar Iqbal

WASHINGTON, March 13: Condoleezza Rice, who begins her first South Asian tour as US secretary of state on Tuesday, may offer to sell weapons, including F-16 jet fighters, to India and Pakistan, diplomatic sources in the US capital told Dawn.

Ms Rice, who has advanced her visit to India by a day, is expected to tell the two nations that the US wants good ties with them and that is why it has come up with this proposal. She is now arriving in New Delhi on Tuesday and leaving for Islamabad on Wednesday.

Dawn reported this dramatic shift in the US policy towards the two countries on Feb 11 and on Feb 12. The Pakistan's ambassador in Washington, Jehangir Karamat, told reporters that Islamabad would not object to India buying F-16s if Islamabad was also permitted to acquire the sophisticated fighter jets.

Washington had stopped all arms sales to the two nations after they tested their nuclear devices in May 1998. Pakistan, which depended almost entirely on the US for weapons, was badly affected by this ban which did not affect India.

Since the 1960s, India had been refusing to buy US arms because of periodic sanctions that interrupted supplies, but recently New Delhi showed interest in buying F-16s from the US while soliciting bids for a purchase of 126 multi-role fighter planes - a programme estimated to be worth $7 billion to $9 billion.

This rekindled America's hopes for selling weapons to India and US officials indicated to New Delhi that they want to be one of the biggest suppliers of arms to the South Asian nation. But diplomatic sources in Washington say that the US does not want to leave Pakistan in the lurch while negotiating a deal with India and that is why it may offer to sell F-16s to the both countries.

Pakistan has been frustrated for years in its desire to buy new F-16s for its air force, which already has 32 older model F-16As and F-16Bs. The US Congress cancelled a sale of about two dozen F-16s to Pakistan in 1990 following differences over Islamabad's nuclear programme.

The first indication that the US is interested in selling the F-16 to India came in November when the State Department permitted Lockheed Martin Corp., which builds the F-16 in Fort Worth, Texas, to give India information on the plane.

Ms Rice may use her visit to tell Indian officials that an F-16 sale will be approved if India chooses the plane, diplomatic sources said. Pakistani officials hope Ms Rice will confirm approval of their request to purchase 18 new F-16Cs and F-16Ds along with "mid-life update kits" to modernize their older models.

India wants to buy only 18 planes directly from the manufacturer and plans to get the other 108 in the 126-plane package by building them in India under license. Such major arms sale to India would end US efforts to use sanctions as a means to prevent India and Pakistan from developing nuclear weapons.

India has traditionally bought most of its weaponry from Russia, and the Russian-made MiG-29M is one of the planes New Delhi is considering for the multi-role fighter deal. Other planes under consideration are Sweden's Saab Gripen and France's Dassault Mirage 2000-5.

If you really want to kill that mildew for good, you definitely should
put some Trisodium Phosphate (TSP) in with the bleach and water.

My question is...the R75 seems to still be a very popular receiver. Why would they discontinue it at this point? It's not all that old even, is it?

Someone earlier asked about the Yaesu FRG-100...I believe that one is discontinued as well. Passport 2005 mentions that.

I would like to hope that Icom will announce another high performing receiver, but I think they are discontinuing it because of lack of demand. Kenwood departed from the SWL market a decade ago after producing one of the finest receivers ever to hit the amateur market - the R5000.

If Taesu is gone (I don't know that) I guess this leaves AOR and Japan Radio as makers of high performance shortwave receivers.

Yes, more blatent Davidisms. Notice he trys in vane to get you to believe
that the US is actually doing this. Of course the facts state otherwise.

"India wants to buy only 18 planes directly from the manufacturer and
plans to get the other 108 in the 126-plane package by building them
in India under license"

And is Bush the one doing this? Of course not, Lockheed is.

dxAce: There is no indication at present on the Universal site of The FRG-100 being discontinued.

mike0219116: For a short time last year, Universal did have it listed as discontinued, only to have it show back up as available a few weeks later.

PWBR has been saying that the FRG-100 was going to be discontinued for several years, but this years edition says it's "for real" this time.

There's usually quite a few Pro-51s on ebay for about $60. The pre 7A4 date
code models go for a bit more around 80-100.

One can really never have enough of either one!

As to ammo, I'd much rather be in a position of having to much, rather than
saying "Oh s**t, I'm out of ammo".

Actually, if it was during a root canal, it was partly that, but mostly
to keep you from swallowing or choking on the bleach they use to clean
out the inside of the tooth. I got a mouthful of it when the dentist
tried to remove it, and had to get muscular with the clamp thing, and it
shot a little of it into the back of my mouth. It burned and tasted
terrible..

Which would make images from +90 MHz possible, putting you straight into FMBCB. Signals would only need to find a way around the 30 MHz lowpass filtering, and there you have it. Your signal levels seem to uncover the limits of the PCB layout and grounding, pretty hardcore if you ask me. It would be interesting to know how a '7030 behaves in that kind of environment. BTW, what kind of FM tuner can handle that kind of "bath"? It would take at least something along the lines of an Onkyo T-4700, I assume.

I know if they list an item as discontinued, it causes a run on them and they make lots of sells. I wouldn't worry about the supply of R-75s at this time. You can still buy them and I'm sure they will be stock for longer then you think.

Lucky

> out of the market.

When I first got into SWL, back in 1986, there were few alternatives for world news. Few people had cable, and there were few channels on the cable systems that did exist. Satellites were the exclusive domain of big users like TV stations and the government. The internet was the exclusive property of a handful of computer scientists who had to be Unix "wizards" in order to navigate around.

Today, anybody can receive satellite TV and even satellite radio. Cable systems are everywhere, they have 150 channels, and they offer high speed internet access, and you can navigate the internet with a few clicks of a mouse. The internet has opened up webcasting, and web sites that anybody can find using Google. In fact, free over the air

broadcasting of MW, FM, and TV is quickly being forced into
obsolescence. Shortwave is also being made obsolete.

I suspect in the future that all media will be delivered via satellite
and the internet. And of course you will pay for it. The demise of free
over the air broadcasting is sad because a few companies and the
government will be able to get rich off the media subscription fees and
closely control what is broadcast, but we're all being forced in that
direction by the powers that be, and soon alternatives to satellite pay
for play media will disappear, leaving us all with $600/yr subscriptions
to tightly controlled media. And people won't even notice that their
worldview has become that much narrower. :(

This is perhaps why Universal simply lists it the way it does in the description,
as as been pointed out TWICE here already today.

When it is TOTALLY discontinued by UNIVERSAL it will say so in the area at the
upper left where the price is now, just like what happened yesterday with the Drake
R8B.

http://www.universal-radio.com/catalog/commrxvr/0175.html

Please folks, do some reading and some logical thinking.

Yeah,we build a lot of "Mighty Fine Junk" here in Mississippi.Nuclear powered Ships and Nuclear powered Submarines for the U.S.Navy and Commercial Ships too,Nissan has a factory just North of Jackson near the I-55 Gluckstat exit between Jackson and Canton.Lockheed Martin has a factory near Meridien.The Parachutes that helped land those two vehicles on Mars were made in or near Crystal Springs.Every commercial Aircraft (and Miltary Aircraft too) has at least one or more Hydraulic Pumps,Motors,Valves in there that was manufactured right here in Jackson,I know a guy who retired from that Factory,formerly,Vickers,Vickers merged with another company not too long ago.Clothing items are made right here in Jackson by the blind folks at Mississippi Industries for the Blind.There are more factorys in Mississippi that build things for our U.S.Military and U.S.Government and Commercial Industry and every one of the Space Shuttle Engines are tested at Stennis Space Center,Mississippi before they go into Orbit.Ionatron (look it up) moved from Tucson,Arizona last year to Stennis Space Center.I could go on and on,but y'all get me driff.It sure is tough building all of those things in the swamps and fighting off the Alligators here in Mississippi,but somebody has got to do it."Mighty Fine Junk"! I have to watch Stalag 17 on tb now.

Very true. Time to upgrade from my DX394 it looks like. I like the looks of
that new Eton but will wait for a few reviews on it first. The R75 is in my
price range though.

If you like your S800 better than your R8, the latter is in desperate need of repair. You can find the address of Drake's service department on their website.

The TS-2000 is not as sensitive on VLF as my Sony ICF-2010 but I haven't opened the 2000 yet to change the BCB filter setting and even then I don't know if it'll improve. But I'll try as soon as I get a bit more familiar with its operation, quite complex.

Yeah no doubt that White House, State Dept., Defense Dept., CIA, DIA at a minimum would be in on approving or advising any request from a military contractor to sell weapons to another state. On something controversial like that sale the congress was well briefed beforehand too. Contrary to the way the article was written the Secretary of State does not offer to sell those planes. It is a deal that has been drafted and blessed well beforehand. She is really just announcing it.

Universal seems to know ahead of time when something like this is going to
happen. They stockpiled the Drake SW2, SAT 800, and now the R75. I remember
when they closed out the SW2 for $400. That was a nice radio for the money.

Is the TS-2000 a R2000 under another tag?

Totally different animals...The TS-2000 is a much more modern design than the fairly old R-2000. The TS-2000 is all bands-all modes much like my IC-706mk2g. Except with more toys than the small icom. It will also cross repeat, work duplex for Sat's, etc...I wouldn't mind getting a TS-2000 as a house radio...A few friends on mine have TS-2000's...I've worked 160m, via UHF, by talking to a guys TS-2000 on UHF, thirty miles away, using my 706g, and then being repeated onto 160m. They are very versatile radios. BTW...I use my IC-706mk2g for SWL, and MW quite a bit..Also the TS-2000 is capable up to 1.2 gigs with an extra module. I think anyway....The radio is a lot of bang for the buck...Ain't no high end contest-dx rig, but I don't contest... MK

this just in from a drake group:

Greetings all-

Despite the notice on some websites, a call just now to RL Drake was
met with "no decision has been made." There was also no news of any
new model in addition to, or to replace, the highly respected R8B.

What does this mean....who knows? I guess we just "stay tuned, eh?"

This I just heard first hand, but like I said: "who knows?" I don't
know if they would tell us now anyway or not. What are your thoughts?

Briggs, ab2nj

WTF is going on ??? First the R8b and now the R-75. Two of the most popular and written about table tops are going up the spout. The question used to be.... "Should I get a new R-75 or a used R8b ???" Soon, the question will be... "What used table top should I get ???" Is the NRD-545 next ???

I hope ICOM makes a replacement for the R-75.

Michael

I read a post on a Yahoo! group (can't remember which one) last year sometime in which a person stated that Drake was going to pull the R8B after the E1 came to market.

In that regard, I found it amusing that Universal "discontinued" the R8B on the same day they posted a price and a specific ETA for the E1.

2693. Chinese TV Pirate Broadcasts Ominous Message to CCP

Unexpected Program on China's TV: Withdrawing from CCP

HONG KONG — At 9 p.m. on March 13, "a statement to withdraw from the Chinese Communist Party (CCP)" popped up on the TV screen when Hong Kong residents were watching a Chinese satellite TV program. It lasted for about a minute. Then, the TV play was resumed. One hour later, the TV station stopped all its programs.
Mrs. Zhang, a resident of the North District of Hong Kong, called The Epoch Times and said that when she and her family were watching Jiang Su Satellite TV programs at home, the screen was paused suddenly, and then there appeared a stationary image of white characters on a red background, which was "A Statement to Withdraw from the Communist Party." A male voice read the statement.

Mrs. Zhang said that although she couldn't remember the details of the statement, the general idea is to tell the Chinese audience that the doomsday of the Chinese Communist Party is approaching. The party has committed tremendous sins against Gods and Buddhas. Gods want a final settlement with it. Also it said, those who joined the organizations of the CCP have been branded with the mark of the beast. They'd better withdraw quickly from its organizations so as to erase the mark. It's better to seize this good opportunity, etc. The special broadcast went on for about 1 minute, and then programming returned to normal.

Mrs. Zhang said that from the mansion where she lives residents can receive TV programs of several provinces from Mainland China. The statement to withdraw from the CCP appeared while she and her family were watching a TV play named "Xiang Zhang Shu." About one hour later, programming on this TV station stopped, and nothing could be seen on it any more. Mrs. Zhang thought that "probably the manager of this station is being investigated."

When talking about "Nine Commentaries on the Chinese Communist Party," Mrs. Zhang said that she got a newspaper edition of them on the street. She says, "The content is excellent, and it is worth reading."

She admires those who dare to declare "the statement to withdraw from the party." She said under the Chinese Communist Party's pressure, those people who bravely do this action will suffer inhuman persecution should they be found out.

Uncensored Satellite Broadcast to China Going Dark
Communist interference suspected

NEW YORK - The TV network aspiring to be "the Chinese PBS" will be unable to reach its prime audience in east Asia after satellite provider Eutelsat unaccountably stops carrying the signal this week.
New Tang Dynasty TV (NTDTV), headquartered in New York, says that the unilateral move not to continue the contract "doesn't make any business sense," according to Samuel Zhou, programming director for NTDTV.

"They have abundant unused capacity on their satellite," he said. "This is a company that has never removed any channel, even those with content that incites violence and hatred."

Heightening the suspicions of NTDTV executives is the fact that Eutelsat continues to accept payment for NTDTV coverage over Europe. Only the sensitive area of China, as well as Taiwan, southeast Asia, Japan, and Korea, are going dark.

"We learned that the true reason they aren't continuing the broadcast is pressure exerted on them by Chinese authorities," said Zhou.

The non-profit network has been broadcasting on four continents, via satellite and cable, since early 2002. In addition to cultural programming, such as the Chinese New Year Global Gala annual broadcast, NTDTV covers original news that makes the ruling Chinese Communist Party nervous, such as 2003's coverage of SARS and the ongoing persecution of Christians and 100 million practitioners of Falun Gong.

NTDTV and Reporters Without Borders (RSF) will hold a press conference in Brussels, Belgium on Tuesday to discuss more details and planned action.

Eutelsat gave no reasons to NTDTV for stopping the signal. Calls from The Ep
och Times seeking comment from the Eutelsat branch office in Washington DC
had not been returned at press time.

http://www.theepochtimes.com/news/5-3-14/27005.html

Media firms looking for pot of gold in Communist China:

Big Media giants such as News Corporation (Fox) and Viacom (CBS) are looking to the "1.3 billion customers" and getting "involved in joint ventures with Chinese players" (BBC), despite the continuing Communist crackdown on media content deemed "harmful." The response from the western media corporations was summed up by this deeply disheartening line from Jeanne-Marie Gescher of CGA consultancy: "who do not care how people consume media " they just want people to consume more of it."
...
But according to recent reports from China, the authorities have tightened controls over foreign investment in TV production joint ventures.

It has limited most foreign companies to only one joint venture and banned
the involvement of any found to be "unfriendly", according to reports.

The SARFT said: "There is a very strong ideological component to production
of broadcast television programmes."

It added: "China must understand the political tendencies and background of overseas partners and prevent joint ventures or cooperation from bringing harmful foreign thinking or culture into our production sector."

According to the Financial Times' China correspondent, the new rules highlight the political sensitivities that surround foreign involvement in China's media sector.

This is despite Beijing's decision to open the state-dominated sector to international investment.

http://news.bbc.co.uk/2/hi/technology/4341413.stm
http://china-e-lobby.blogspot.com/

It is only a matter of time before US media involved with China is pressured to portray the Chinese Communist Party in a "friendly" light back in their home audiences. In recent history the BBC was temporarily removed from the channel line-up on cable TV systems in China because of a controversial program.

CCP pressure on foreign media has also occurred in the US book publishing industry. Several major publishers involved with the CCP declined to accept manuscripts with anti-Communist subject matter submitted by authors. Those authors were able to eventually publish their works with non-CCP involved publishing companies.

The propaganda wars continue...

If we don't sell it to them Russia or China will!

It isn't the plane it is the pilot.

The latest hardware INSIDE a US military owned and piloted F-16 is NOT available to foreign countries.

F-16 have been around for how long? 20+ years? Not exactly cutting edge technology but still viable.

Protest is not a "form of patriotism." Protest is an act that patriots may actually do from time to time, but is not in itself patriotism. Protest (or dissent) that is based on socialist or Marxist principles such as the ones you continually espouse against the values and freedoms of Americans is at best "kookery," and most of us see it (and you) as just that.

Not that I want to give you any ideas, but if you decided to picket a grocery store because they sell Swiss cheese and you don't like anything Swiss, you would not be a patriot. You'd be a kook. Understand?

Now, it is interesting that you apparently believe that you're now able to channel "the spirits of our founding fathers," and think that they would actually support your ludicrous positions.

Unless you had significant amounts of land and property, our founding fathers didn't think you should be voting. And David, unless I'm way off in my assessment of your lowly station in life (after all, you're always wanting to help yourself to the fruits of others' labors through excessive taxation so you can be provided for through government), they were wise indeed.

> tnx
>

I us my Kenwood TS-570D(G) for most of my shortwave and ham use, cost
was about $800 a few years ago. I also have a Yaesu FT-857 that was
purchased with $175 rebate (final cost was $599 which included the DSP
unit!). I occasionally use an ATS-909 ($249).

The Kenwood is used with an MFJ differential T tuner (MFJ-986). And
yes, the tuner helps with reception. I have a 135 ft. dipole feed with
ladderline connected to a 4:1 balun (in the tuner).
This is my favorite setup as it is easy to use and has the best
performance, definately because of the antenna and tuner, but also
because the radio has more "front panel" controls and audio DSP. Not as
great as "real" IF stage DSP, but nice when you need it. DSP for CW is
AMAZING. 11 selectable filters from 2Khz to as tight as 50 Hz. External
speaker definitely helps when in the shack. Wireless headphones let me
walk around the house and into the yard, untethered.
The default BCB attenuator was jumpered out for better sensitivity
(there is a small jumper on the main board, just like a small computer
jumper).

The Yaesu is a great radio, 1.8Mhz - 30 Mhz, 6 meters, 2 meters and 70cm
on transmit and a huge Receive range 0.1Khz to around 512Mhz (with some
blank spots).
IMHO one of the best bangs for the buck. It is connected to about 25
feet of tiny 30 gauge wire strung out the window. No ground, no matching
transformer, just connected to the center of the antenna jack. Very
good performance in this "temporary" setup! It has a terrible speaker,
but I use headphone with this rig almost exclusively. It has plenty of
audio to drive an external speaker. It would be my choice if I could
only have 1 radio. House, car, vacation, this rig gets lots of use.
Currently on my nightstand (hence the 30 gauge wire out the window).
It will evetually go into my truck for mobile operation.
The audio DSP is good for SSB and OK for CW (only 3 (?) selectable
filters on CW)

The ATS-909 is what everyone knows already. Not very good off the whip.
A good radio with an external antenna (20 to 60 feet of wire). I use
a 9:1 matching transformer. Eats batteries so the wallwart is always
plugged in. This was my nightstand radio, and will be again when the
FT-857 goes mobile. I wish the tuning knob was bigger and that the fine
tuning on ssb was displayed more accurately on the LCD, but these are
really minor gripes. It is a good radio with many decent functions.
Speaker or headphone, it is an easy listen. FM stereo (through the
headphones) is very good.
But if I was to do it again, I would pass on the 909 and save a few more
dollars and buy the Yeasu.

None of my radios have AM sync, so I have no comment on this.
Listen to mostly AM program, SSB ham, some AM DXing & occasional CW.
Once in a while utes, but not often.

I see no reason why Icom would ax the R-75 unless they have something else to offer in the future. This is a top notch communications receiver and it's pretty cheap new. If it's totally true and the R-75 will actually be GONE soon, it's a tragedy for SWLers.

The R-75 is the perfect DX'ing receiver for the money and fills a need for us. There is a big difference in taking a $1500 radio off the market compared to a rig costing under 5 bills. It affects more people and cuts across a wider demographic.

It looks like the cheaper radio products from China are cutting into their profits and is partly to blame for all this. Plus a decline in popularity due to lowered brain activity among our populace.

Lucky

Indeed.... I cant fathom that Icom would get out of the marker all together.
The amount and type of sw broadcasters will always change, but there will
ALWAYS be a market for a capable and affordable sw table top.

That's what I was thinking it was, although they're made out of rubber rather than plastic. And he's all worked because he hates my guts. There could be several reasons why he didn't get the joke. It may have been too subtle, it may have been written at a level beyond his comprehension, it might not have been funny and so he didn't recognize it as one, or maybe he's just plain dumb. Of course, there could be any number of other reasons as well, and a combination of any of them should be considered.

If instead you mean what makes me -think- that he didn't get the joke, I'll say the voice of experience. ;)

running dogg <run@ning.dog> wrote in news:42365d24$1_1@127.0.0.1:

I couldn't agree with you more.

The HAM rigs are also available used at HAM fests, just be one of the first ones there. It's incredible the amount of items that are sold before the HAM fest opens. Buy a table, as if you are going to sell, then you get the early admission (setup time for the sellers, way before the buyers are admitted). Usually it's only a couple of dollars more to sell than to buy.

The Yaesu VR-5000 is a wideband receiver. Without trying to insult those in the group that have them, with wideband performance comes wideband woes. I have 2 wideband transceivers, the intermod interference is horrific. The VX-2R is great when attenuated, the VX-5R has no attenuator, beeper sounds galore.

My Picks, either through recommendation or just wishful thinking:

http://www.universal-radio.com/catalog/hamhf/3689.html Recommended. $740
http://www.universal-radio.com/catalog/hamhf/2319.html A-One Radio $575
http://www.universal-radio.com/catalog/hamhf/1897.html HF Through UHF $900 (I'd like to own one)

http://www.universal-radio.com/catalog/hamhf/0703.html Looks Nice $570
http://www.universal-radio.com/catalog/hamhf/0718.html (You R-75 Owners, take a look, $595).

http://www.universal-radio.com/catalog/hamhf/0868.html Looks nice $700
http://www.universal-radio.com/catalog/hamhf/0868.html Looks nice $915

http://www.universal-radio.com/catalog/hamhf/3595.html I'd buy one in a heart beat, I have lusted for one of these for some time, and the odd thing is that I don't know if it is any good, I need to look for reviews first. $660.
http://www.universal-radio.com/catalog/hamhf/4319.html $780

Lastly, I have the Samlex Power Supply, model 1223 13.8 Volt 20 Amps http://www.universal-radio.com/catalog/hamps/3747.html $90, you will need something like this for the above radios. Though if you don't intend to transmit, the 10 AMP supply would do (it's only $10 cheaper).

P.S. I usually buy from AES in Cleveland, http://www.aesham.com/ though there seems to be quite an assortment of retailers (such as Universal).

A McIntosh MR78 can handle that kind of environment. One of the tests that McIntosh used to do was to inject a 12V interfering signal at a 10MHz offset to make sure that it didn't cause an increase in distortion at the frequency of the desired signal. It works very well in the Chicago area. A Luxman T-110 was also good, as was a Nakamichi Model 430 tuner. There are several good FM tuners on the market, including the Onkyo units that do the trick. The early Magnum Dynalab FM tuners that had the discrete front ends were also pretty good, but some of the models are using one of the Philips auto radio chipsets, including the RF/Mixer section.
Whereas the FRG100 had those images breaking through on some of the MW frequencies in my area, the AOR7030 didn't exhibit that characteristic. The Lowe HF-150 doesn't have this problem either; nor does the Palstar R30. The latter three units do have a 45MHz 1st I.F.
Nice work, Frank.

cuhulin@webtv.net wrote in
news:26680-4236A646-51@storefull-3255.bay.webtv.net:

Actually, I had been eyeballing those tiny TVs that Radio Shack sells, the handheld type. The prices seemed reasonable. Problem is, as you state, the transmission mode will soon be HD, and these TVs will become technological paperweights, therefore I did not purchase. I can't imagine carrying a cable TV converter size box to receive HD signals on my handheld TV.

Of the handheld TVs, as far as I know, the principle of angular diameter applies. Consider the moon and the sun. Concerning angular diameter, they (from earth), appear the same size (plus or minus a very small amount). Because of this, the moon is often able to fully eclipse the sun. Quite a nice match up, size wise.

http://www.rc-astro.com/composite/sun_moon.htm

http://www.photoastronomique.net/photo_us.php?nom=0502220003-16_16-25

Look here, the third photo set down, a comparison of the Sun, Jupiter, and the Earth, with the Earth as just a speck.

http://www.hartrao.ac.za/other/howfar/howfar.html

Obviously the Sun is massive, yet it appears to us to be the same size as the moon. Same with the Handheld TVs (no, they don't appear the same size as the moon ;-), you can have your own personal Big Screen TV for under $200. (actually the little TV, held close, giving the same angular diameter as a considerably larger TV across the room).

Look at your TV across the room, hold a ruler at arms length, place one side of the ruler on the left of the TV screen, place your thumb at the point on the ruler where the right side of the screen is. A TV the size that your ruler is indicating, held at arms length, is the same size image in your mind as the TV across the room. I'm sure that some of you have those gigantic TVs, this may be a little harder to visualize, but the principle is valid.

http://www.celestron.com/education/binbasic.htm

From what I know of optics, a 10 power (10X) binocular increases the angular diameter of the object viewed by 10 times, it does not make it appear 10 times closer (it makes it appear even closer than 10 times). The example that I read was to stand 2 feet from the wall, look at the wall, now step forward one foot. You are now at half the distance, does the wall appear twice as big? No.

But supposedly, to view the wall through a 2X binocular would make it appear closer than 2 times, as the angular diameter has been doubled. A cursory experiment with a ruler held at arms length, and the angular diameter of the laptop screen confirms this. Half the distance does not yield twice the size.

Anyway, don't trust searches on the internet, as they have simplified the concept, using the 10 times the size and 10 times closer analogy.

I digress, but it was fun.

Regards

Dr. Artaud

i was talking to craig at kiwa electronics today and he couldn't
believe it as he knows as a matter of his business how popular the r75
is.

i understand his reasoning but the r-75 has some nasty little warts
that need work before it's a good modern rcvr, hence craig's business.

but today, given an rf preamp chip, an analog devices adc, an fpga, a
coupla ti dsp processors, a coupla voltage regulator chips, and you
have a very high performance radio...ever open a ten-tec...there's
nothing inside. i'm sure icom is about to come out with a very modern
rcvr derived from the dsp based receivers in their new transceivers.

I fully agree Icom has something to take it's place. Perhaps a beefed up R-75 base with all the fixes plus better DSP at an affordable price. I hope they don't cut corners too much if they do come out with something new. If I didn't own a R-75, I would been buying one right away.

This may the last chance to pick a brand new communications receiver with DSP that performs so well for the money.

Sans wild brand loyalty, no one here that loves SW radio that tried a R-75 for a month would really have much to complain about and would want to keep it.

hmmm..i bought one the other day and am still waiting for it to
arrive. that's why i was talking to craig at kiwa...we were picking
out some of his r75 mods...craig seems to think highly of the radio as
you do, though there's alot of opinions when i asked for some guidance
before the purchase.

and we spent too much time talking about how to rig up a 500' beverage
antenna on a boxkite at the beach without blowing out the front end
from static... :)

but i really can't figure out the prices of the tabletop sw radios,
like the tentec 350d...it's 4 chips, a board, and an lcd display with
a fancy plastic case. yes, there's a fair amount of nre costs, but
still...i'd love to know what the volume/yr is one some of these radio
models...anyone have any idea...is it thousands, tens of thousands,
hundreds of thousands worldwide? maybe there aren't very many swlers?

I'll jump in here and say "ditto" also to the 756Pro. I love mine for trans-Pacific mediumwave and tropical bands DXing. It outclasses my highly modded R-75, which was the equivalent to a fine example of a Racal RA6790GM I owned.

The modest MW attenuation in the 756Pro can be removed fairly easily... two SMD chips need to be taken off and a jumper wire added. Email me for info if you are interested (remove the NOSPAM in my email address) The mod made a difference to threshold level trans-Pacific stations when compared to a fully stock 756Pro.

The Yaesu FT-920 also works well for SWL/DXIng. There are some good INRAD filters that fit this model, too. However, considering the performance benefits, the 756Pro is a better value for the money.

2737. Re: FRG-100 FM pickup problem - solved (long)

Newsgroup: rec.radio.shortwave
Date: 2005-03-16 05:27:00 UTC
From: fcathell@msn.com
Message-ID: <1110950820.196248.151860@o13g2000cwo.googlegroups.com>
Source record: 12227

My FM receivers seem to be OK although one of the stations has an image due to the signal strength. Both the Palstar R30 and HF-150 that I had in the past had the same FM pickup problem but it was no where near as bad as the FRG-100 and it was only on a couple of frequencies if I remember correctly. The interference could only be detected when the antenna was disconnected and one manually scanned the bands. By using the additional connector on the I put on the FRG's back panel along with some toroidal filters on the 12V power cable I've reduced it to a tolerable level that only seems to be present if the antenna is disconnected. I also added a few additional toroids at equal places on the power cable and that helped even more because they apparently broke the cable into smaller effective electrical lengths instead of the full physical length, which is, by the way a half-wavelength in the lower part of the FM band.

You've got a problem with that? You don't have a problem buying their "aluminum telescoping poles". And later you said something about me calling you a commie bastard if you bought one of their radios, but here in this post...well, anyone can see for themselves what you have to say, which seems to agree with my tongue in cheek comment. Make up your so-called mind, cuhulin. And of course, you're not a racist are you? Why don't you call one those people a slant eyed chink to their face, and see how they react?

While there may have been a Maryanne Kehoe who has passed away, it is not the Maryanne of our hobby. Deliberate confusion is practiced on the internet by nasty individuals who use aliases, (hey wait, I'm using an alias too).
Maryanne is an avid SWL from Atlanta who contributes regularly to various online and print publications centered around Shortwave. Most notably she forwards press releases and the schedule of Voice Of Russia on a regular basis to the groups and clubs she participates in. You can find reports from her in Monitoring Times.
The immature males who can't accept a woman as a DX'er in their hobby ridicule and put her down because she can be quite obnoxious at times, is tall for a woman, horrendously top-heavy and preferred to wear crew cuts. Under that exterior, which has shed a large quantity of poundage, and added an inch or two of head hair in the last year, she has a heart of gold.
I used to rag on her until one night when a bunch of us got into a chat room and started discussing the bad things we said about her. After a few minutes of laughing it hit us that we were all being jerks and none of us have said anything derogatory about her since. Gee, I think I've done penance.

Like any attorney will spend time over some dumb Usenet post...hope you have LOTS of money and LOTS of time to pursue such a "vanity" case.

How could such a post cause you "financial loss"!? Better have some concrete figures in hand in *real* life when you make such threats to Usenet posters.

Get real, Mary Ann - people have said a LOT worse things about *me* on Usenet (that I'm a gay prostitute with AIDS, that I live in a dirt hovel, that I've had sex with my mother, etc. etc. etc...). Best to just ignore/laugh at such posts and move on (and like you I post under my real name, any employer/business/acquaintance can google my name and find all this stuff).. If you are so sensitive to flames then I'd suggest you get off Usenet and stay off Usenet...or find a new alias/persona to post under.

Now this poster (who started the thread) knows they have gotten the "best" of you, and they may delight in making further "mischief" against you, baiting you, etc. You fell for their troll. Good luck in finding them!

And lastly from what I've read you apparently are no Usenet "angel" yourself . If you didn't apparently insist on deliberately ignoring basic netiquette protocol, netcopping people so much, etc. then perhaps these "gremlins" would simply ignore you. As it is you've apparently caused a lot of rancor over the years on Usenet, so you might consider your *own* behavior. Plus which you have posted WAAAAAAY too much of your personal stuff on Usenet/the internet. It's something to consider (and I DO mean all of my comments above *sincerely* BTW, I am not flaming you).

> filtering was far too narrow.

According to all the people I've known that owned the 840, it is
pretty good...It always sort of reminded me of a yaesu version of
the old IC-730...Same basic look, layout...
>

>
> Oh, and by the by, some of the HAM transceivers are portable, not
quite
> tabletop, definitely not handheld.
> http://www.universal-radio.com/catalog/hamhf/1857.html
> http://www.universal-radio.com/catalog/hamhf/1897.html
> and others, these are just the ones that came to mine.

Yep, and even those make pretty decent "tabletop radios".
I use my IC-706mk2g as a tabletop 90% of the time,
http://www.icomamerica.com/products/amateur/706mkIIg/706mk2gphoto.asp

even though I bought it as a mobile rig...I use it everywhere..
Mobile, portable, and at home...I don't leave it in the car,
cuz I'm afraid someone will steal it...I just put it in,
if I plan on using it, or going out of town, etc..

In the house, it seems about like a tabletop, cuz it's got a
folding stand in front to raise and tilt the radio. It's not
shown in the pix, but it's a chrome metal folding stand
that is under the main portion of the radio...Makes all

the difference..."I happen to like all my radios tilting
up a bit in the front..." I keep my faceplate on the radio,
so it seems like a tabletop, just pretty small.

But get a load of this new version that is "supposed" to be
coming out.
http://www.qsl.net/ab4oj/icom/ic7000.html
It's the replacement for the 706mk2g...Looks pretty
killer, and I think will definitely give the yaesu's a run
for their money in the "mini-mobile" market.
It's the mk2g rebuilt with a dose of "pro" steroids....:)
I've had great luck with the 706mk2g, and hadn't planned on
getting rid of it anytime soon...But dunno...That IC-7000
has me drooling at the mouth...Being thats a CAD drawing,
I would expect the real thing to look even better than
that pix...500+ mem channels, Dual PBT, hi-stab xtal included,
no extra filters required due to the IF-DSP, etc, ad nausium...
Pretty slick for the small 706 package...It is obviously still
a 706 in basic design...Just pumped to the gills compared to
the original model...This would be the 4th "706" model so far
if it comes out...
I guess they consider it a totally new model, calling it the
IC-7000, but it's still basically a 706 on steroids...
As far as receivers only...It's a tuff call really...I'm sure
new models will come out, but I don't really know what to
expect, except that I expect hi-tech...Small little jobs that
go DC to light in a small package, and actually do it fairly
well. Colorful "pro type" displays, DSP of course, etc...
But overall, doesn't really matter to me, as I'll always be
buying the ham transceivers...That way, I get my moneys worth..
Do it all in one box...The 706 has been great in that regard..
MK

I wonder what what would rationalize this. In other words, what would the launch of the E1 have to do with the R8B? I guess it would make some sense to pull the R8B when the E1 is launched IF Drake were going to be selling the E1. However, I've never seen any indication on Drake's website that it will sell or even service the E1. In fact, aside from a couple of extremely vague comments here and there, I've not been able to figure out exactly what Drake has to do with the E1, period.

Either Drake hasn't really had that much to do with the E1, or it's keeping quiet about the precise nature and extent of its involvement.

Neither of these scenarios give me a good feeling about the E1.

My former neighbour has an S800... had them both here, side by side. The R8 was clearly the superior receiver, and the 'sync' had nothing to do with it.

Problem is, that very 'modern' receiver will probably need to be modified to
work properly just like everyone of their offerings over the past 20+ years.

Sync detection is important, but it's not everything. The S800 has great sound, and yes, it has good sync detection (though there are other (recently discontinued) 'portables' with better). It's a good portable receiver housed in a grossly oversized plastic body. It will always deliver portable performance because that's what it was designed for. There's nothing wrong with that, but it's not reasonable to expect the S800 to equal an R8 in overall performance. Or look at it this way: If the S800 even came close to the R8 in overall performance, the R8 would really have to suck....which it doesn't.

Sometimes I have the feeling that we're not "allowed" to subject the S800 to the same kind of critical scrutiny that we routinely subject other receivers to, and I don't understand that. (I'm not saying that this is Jim's attitude, but it's an attitude I encounter periodically here and elsewhere.) The 800 is a good receiver. It can withstand the scrutiny well enough. We don't have to pretend that the S800 is the best receiver ever made! It's great to be 'loyal' to a particular make or model, but jeez...at some point we have to get a grip!

David,

You probably think you're smart, but you just help to prove the accuracy of the Scriptures. Check out the verse just before the one you referenced.

3 Knowing this first, that there shall come in the last days scoffers, walking after their own lusts,

4 And saying, Where is the promise of his coming? for since the fathers fell asleep, all things continue as they were from the beginning of the creation.

5 For this they willingly are ignorant of, that by the word of God the heavens were of old, and the earth standing out of the water and in the water:

6 Whereby the world that then was, being overflowed with water, perished:

7 But the heavens and the earth, which are now, by the same word are kept in store, reserved unto fire against the day of judgment and perdition of ungodly men.

8 But, beloved, be not ignorant of this one thing, that one day is with the Lord as a thousand years, and a thousand years as one day.

9 The Lord is not slack concerning his promise, as some men count slackness; but is longsuffering to usï¿½ward, not willing that any should perish, but that all should come to repentance.

10 But the day of the Lord will come as a thief in the night; in the which the heavens shall pass away with a great noise, and the elements shall melt with fervent heat, the earth also and the works that are therein shall be burned up.

11 Seeing then that all these things shall be dissolved, what manner of persons ought ye to be in all holy conversation and godliness,

12 Looking for and hasting unto the coming of the day of God, wherein the heavens being on fire shall be dissolved, and the elements shall melt with fervent heat?

One way to protect the front end of the R75 when using a long antenna is to use a 220uH choke from the antenna input to ground. This way, you have a DC ground path to drain off the static buildup from the antenna. You do need a good ground connected to your receiver, though.

Pete

Try responding to the question with an answer rather than dodging with another question. Again:

Really...now that is a statement sounds like it is making a point when it really isn't. Please tell me what you are really saying. Surely you can't be saying that China will only change when the CCP has completely disappeared. Surely all the change that I have read about for the past 20+ years isn't a figment of some reporter's imagination is it?

Are you saying that the only change that will occur in China will happen after the CCP has completely disappeared? If so, how do you account for all of the change that has been reported in the last 20 plus years.

Or are you just trying to make a coy political statement without backing it up.....

Yeah, it seems to be a good amateur receiver, but a
general coverage shortwave receiver it ain't.

That's good.....it sounds like you are really in a strong signal area.
Up here at our new location, things are pretty good. I think that the worst
area in Illinois in in the Barrington area. WBBM, WMAQ, and WGN are so
strong that external mixing spur occur in rusty rain gutters, etc. I realize
that these are MW frequencies we are talking about vs. the FM band image
responses that you are dealing with. As you get higher in frequencies, those
gremlins can become harder to tame.
I've still yet to do your audio mod to my FRG100.....too many
receivers. I might be picking up a
McKay-Dymek DR-33. It depends when my friend gets bored with it.

The 7030+ is a fine receiver. No doubt about it. When I was in the market for a receiver last year, I was torn between the 7030+ and the Drake. In the end I plunked for the Drake, but I continue to be interested in the 7030+, as well as one or two other receivers.

I don't plan to buy another receiver anytime soon--unless perhaps if Kneisner and Doering actually follow up on their plan to market a successor to the KWZ30. They *say* this is going to happen at some point, but they've been saying it for a long time.

> S800 is in desperate need of repair!

Yes, the S800 has a good sync, better than the original R8
and R8A's, but the S800 does not have the front end
selectivity that an R8/R8A has. It also doesn't have the
passband offset or notch or noise blanker, and you can't
turn the AGC off on an S800.

Here would be a good test: on 5975, there's our old buddy,
the BBC. On 5980, there's RTV Marocaine (Morocco). On
the occasional days when the BBC isn't running on 5975,
I can listen to Moroccan music on 5980. However, the BBC
simply overwhelms my reception of Marocaine on most
days on my S800. Can an R8/R8A/R8B pull Marocaine out?
That, I don't know, but the tools to do it are there on the
R8's, whereas on the S800, you're rather limited to the sync
and the 6/4/2.3 bandwidths.

I have an S800, but I know it's not a DXing machine like
the R8's, the R5000, JRC's and the IC-R71A are. I was planning

on getting a good old boatanchor at the Hamvention this year, but the discontinuing of the R8B and IC-R75 might have me change my mind and start scouring for a good DX-ing maching a year or two early. The friend I sold my IC-R70 to recently offered to sell it back to me (he's had no time the past couple of years to use it), but I want to see what I can find for DX-ing that can do better than an IC-R70.

Drake designed the guts of the E1, just like they did
with the S800 (which was essentially the core of the
Drake SW8 with some Lextronics/Eton modifications).

2779. Tabletop Short Wave Receivers

Newsgroup: rec.radio.shortwave
Date: 2005-03-16 14:32:45 UTC
From: Joe Analssandrini <analssandrinij@yahoo.com>
Message-ID: <1110983565.871036.58100@g14g2000cwa.googlegroups.com>
Source record: 12418

Hello All.

An amazing date, March 15, 2005. BOTH the Drake R8B AND the ICOM IC-R75 tabletop short wave receivers discontinued on the same day!

Fortunately not only is the AOR AR7030 Plus, a far better receiver than either, not "going away," it is again being offered for sale in the US via Universal.

I would suggest, however, that if you have been contemplating purchase of this (or any tabletop) receiver, NOW is the time to buy one.

Note that many people will spend $1000 - $2500 on a computer which will "last" for only three or four years before needing replacement (and most likely will give the owner a fair amount of "grief" during that time); in that light, the purchase of an AOR AR7030 Plus receiver looks like a very wise investment indeed.

Consider it carefully and then ACT!

Best,

Joe

P.S. I am not a "conspiracy theorist," but could it be that governments don't want people to own sophisticated short wave receivers because the analog signals cannot be controlled by them?

An equivocal answer like: "no decision has been made." tells me their public relations rep worked previously for the White House. At the very least the R8B is under very close scrutiny by Drake, otherwise they would killed the rumor with something like: "The R8B remains in our current lineup".

Because Universal has made an uneqiovocal announcement it may also mean that Drake is testing the waters for untapped demand through it's dealer network. They may be playing a game with what is a loyal if small base of customers.

And by announcing it on a dealer site, but holding back on a formal corporate announcement, R.L. Drake may also be trying to keep the sales price as high as possible on a product that they have decided to discontinue. Generate some additional sales by hinting at a discontinuance while also minimizing fire sale prices. They may have a lot of 'em sitting in the warehouse.

And it could be just abysmal communications between Drake and one of it's bigger dealers...unlikely, but possible.

Good points, but is our world view that much broader by listening to broadcasts on H.F. from the overseas equivalents of the VOA than it is by listening to news feeds and programming from DW, Al Jazeera, BBC, China Int'l, etc., over cable TV, satellite radio, etc.

There is spin and censorship involved no matter which medium you choose to get your news and other programing on.

It is also a very good time to pick up one of the several high quality tabletop receivers that have been pulled from the market in the last 15 years. A used Kenwood, Icom, Yaesu or Japan Radio receiver can also provide a lot of value for the price.

Lockheed (Lockheed Martin) won the bid for building the new Air Force One Helicopters and of course there will be backup Air Force One Helicopters too.Don't you worry about Fort Worth,Great Republic of Texas,Fort Worth,Great Republic of Texas is doing very well for it's self.And that also means more jobs over here for Mississippians who will be building parts for the new Air Force One Helicopters and more jobs for folks in other States too.Hey,do a www.dogpile.com for,Mississippi Aircraft Production
We build Aircraft parts over here too.Hey again,the Stetson Hat was invented by John Stetson right here in Mississippi.I don't wear a hat unless it is raining hard enough outside and then I put on my old beat up raggity Pith Helmet Hat because it serves as a mini umbrella for me,keeps the rain off of my spectacles and it is raining here right now.I think I will buy myself a brand spanking new Stetson Hat and some Cowboy clothes too.There are stores here in Jackson that sell those clothing articles.After all,the Great Republic of Texas is a sister to Mississippi.Here is how Cowboys and Cowgirls got their names.Wayyyyy back many,many years in New England,those mamas would holler out to those youngans,y'all! go round up the cow(s) and bring em in for milking or I am going to get me a switch and wear y'all out! Cowboys and Cowgirls actually came from New England first,in America,they did.Moving West,they helped drive those Cattle West.It Happened Like That,Moving West!

Gee I'm pretty surprised Ace. I would figured you of all people would love it for it's DXing performance. I will admit it takes a little getting used to before you cozy up to it. But once you realize what you can do with it, you'll be happy. You can't just try it for 5 min. You have to experience conditions where it shows you how well it brings signals in this cruel world.

I simply use a database file in an old version of Microsoft Works. It allows me to create my own fields, sort by any field, search, etc. It's very versatile. I can even copy & paste loggings to a text file or anywhere else I want. I think any database program should work well as a shortwave log. And the best part is, if you already use the software for other purposes, you don't have to pay anything to use it as a logbook.

Yes, a good condition Kenwood R-5000 has to be one of the best older radios
I ever used. It's so sensitive and with it's dual VFOs and excellent notch,
one of the best buys of an older rig.

Got my 8 way battery charger yesterday. Does NiCDs in 5 hours, NiMH in 8.
There is no way I'll recharge and keep batteries in my 150 for a long
period. I'm too protective of it.

Tried it out here with the fellow who owned it side by side with the other Drakes for about 5-6 hours.

Bottom line: the individual sold the R75 and bought an R8B.

Now, if I figured I'd be getting a better bang for my buck I'd have sold my Drake's and purchased four (4) R75's... but I didn't...

That was the one I was thinking of, although I wanted to give equal time to the others 'cause they are all fine units. Not only does the R5000 have a good selection of very useful controls, but the quality of it's audio is somewhat clearer (imho) than comparable receivers from Icom or Japan Radio. I've found that edge of clarity helps with certain weak stations.

I hate to be very cruel, but so be it. You haven't even cozied up to the R75 well enough yet to even be able to 'zero-beat' a signal so as to properly report its frequency.

I'm not sure if that's a fault on your part, or on the part of the R75, but I'm fairly certain that after some period of time you'll be able to master its quirks.

Not sure I understand which radios are copies of Drakes....

I've heard that about the quality many of the later Satellit radios. The Grundig name to me is associated with mellow sounding luggable radios having lots of controls and several analog dials. As I remember the later digital models always seemed to always have some sort of issue with either audio quality, the synch detector or memory controls that took some of the edge from a premium priced receiver. The last one I played with was the Satellit 700 and found it completely un-intuitve to use. I gave up waiting for it's successor because Grundig USA seemed to lurch from one postponment to another.

I understand the Chinese badged version of the latest Satellit can be had for $300.00 - is that possible? I have no idea what the Satellit badged version sells for.

No, it's simply a so-so radio... with all the faults one has come to expect in an ICOM SWL receiver.

The R-4B with a bunch of extra crystals or coupled with the FS-4 synthesizer was much better for SW dx'ing.

The R-4C was indeed (and may still be) a better ham radio receiver.

$449 (+S/H) from Universal, or a reconditioned one
(courtesy of Drake) for $399 from Universal. What
Lextronics (which became Eton, I believe) did was
to go to Drake, purchase the rights to use the guts
of the Drake SW8 in the Satellit 800, then Lextronics
did some work to add in FM BCB, their own audio,
and a few other tweaks. Then Lextronics licensed
Tecsun to build them. That's the (extremely) short
summary of how the Sat 800 came to be.

As I like to put it, where the radio works, you can
thank Drake, and where it doesn't you can thank
Lextronics/Eton. The SW8 is a nice portatop, and
while the Sat 800 has nicer sound, the SW8 had
some intangibles with it to make it more useful
(solid construction vs. Chinese QA/QC problems,
and more birdies in the Sat 800 than in the SW8,
to name two). However, the SW8 was a couple
hundred dollars more than the Sat 800, and if you
got a good model or a reconditioned one, it was
(and is still) a good value.

HOW TO TURN $6 INTO $6,000!!!!!! READING THIS COULD CHANGE YOUR LIFE!

I found this on a bulletin board and decided to try it. A little while back, I was browsing through newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $6.00! So I thought, Yeah right, this must be a scam,but like most of us, I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 6 names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at least 200 newsgroups. (There are thousands) No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured: what have I got to lose except 6 stamps and $6.00, right? Then I invested the measly $6.00. Well GUESS WHAT!!... within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in. In my first week, I made about $25.00. By the end of the second week I had made a total of over $1,000.00! In the third week I had over $10,000.00 and it`s still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it`s still coming in rapidly. It`s certainly worth $6.00, and 6 stamps, I have spent more than that on the lottery!! Let me tell you how this works and most importantly, why it works....Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy!
Suggestion: Read this entire message carefully! (Print it out or download it.) Follow the simple directions and watch the money come in! It`s easy. It`s legal. And, your investment is only $6.00 (Plus postage)

IMPORTANT: This is not a scam; it is not indecent; it is not illegal; and it is virtually no risk - it really works!!!! If all of the following instructions are followed exactly, you will receive extraordinary dividends.

PLEASE NOTE: Please follow these directions PERCISELY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions. You will now become part of the Mail Order business. In this business your product is not solid and tangible, it`s a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the

mailing lists is secondary to the income which is made from people like you and me asking to be included in that list. Here are the 4 easy steps to success:

STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper; PLEASE PUT ME ON YOUR MAILING LIST. Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal! Mail the 6 envelopes to the following addresses:

Mailing Addresses

1. P. FREY, 4577 W. PONDS CIR, LITTLETON, CO 80123
2. E. DE LEON, 14014 Rosecrest, Houston,TX 77045
3. A. Lopez, 810 Ave.J, South Houston TX 77587
4. L. Pacheco, 812 Ave.J, South Houston, TX 77587
5. K. Bat, 9335 Alcona Street, Lanham, MD 20706
6. B. Scruggins, P.O. Box 845 Port Barre, LA 70577

STEP 2: Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 24,000 groups) All you need is 200, but remember, the more you post, the more money you make! This is perfectly legal! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal lottery laws.
Keep a copy of these steps for yourself and, whenever you need money, you can use it again, and again.

PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at it this way. If you are of integrity, the program will continue and the money that so many others have received will come your way.

NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.)
So, as each post is downloaded and the directions carefully followed,

six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of dollars in CASH!!! What an opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you`re in business!
---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS---------- Step 1) You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select `copy` from the edit menu. This will copy the entire letter into the computer`s memory.

Step 2) Open a blank `notepad` file and place your cursor at the top of the blank page. From the `edit` menu select `paste`. This will paste a copy of the letter into notepad so that you can add your name to the list.
Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you`ll always have this file to go back to.

Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.) Just example you log on any search engine like, yahoo.com,google.com, altavista.com,excite.com then you search with this subject millionaire message board? or money making message
board? or employment message board? or money making discussions? or money making forum? or business message board? etc. You will find thousand & thousand message board. Click one by one then you will find the option post a new message.
Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You`re done with your first one! Congratulations...THAT`S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup!

REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200
That`s it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it.
JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.

Now the WHY part: Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now

those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625,00! With an original investment of only $6.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is: do you realize that thousands of people all over the world are joining the internet and reading these articles everyday?, JUST LIKE YOU are now!! So, can you afford $6.00 and see if it really works?? I think so... People have said, "What if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet.

Remember: Play FAIRLY and HONESTLY and this will really work.

Jefferson and Madison and Franklin left thousand of pages of writing
revealing a lot about the underlying philosophy upon which this nation
was founded. Unfortunately we live in a culture of sound bites.

I will say I know that the USA was started to get away from the kind
of people we have running the country now. That this despotic rule is
largely our own fault for being mindless and cowardly couch potatoes
unwilling to find out what is really happening because it makes us
feel uncomfortable.

The images looks like they were resized rather badly (at least in part)
and saved as JPEG with very heavy compression. That tells more about the
image editing skills of the author and potential space limits on the
server than the receivers themselves. Someone who's been surfing the web
for a while should be able to recognize JPEG artifacts, really.

BTW, at least now I know what this Quelle Universum labeled "Parabola
3000" (?) receiver that recently went on Ebay was - a Toshiba RT-2880.

Traitor? It's not like Lockheed is selling the F16s to Iran or NK.

Ok so the thread has changed, from Drake R-8 to R-4, speaking of
Drakes, I was wondering if the SPR-4 was better or worse reciever
than r-4? I never fooled with r-4, but have tried spr-4, my major complaint with that it it
a little too selective and audio quality lacking.

Thanks for the background on where the Sat 800 came from and how it relates to the SW8. If the R8B is really being killed, it doesn't leave much in the way of interesting radios for them to sell. Cable and other equipment.

2827. Re: Ham transceiver gen. cov. Rx ? TS-2000

Newsgroup: rec.radio.shortwave
Date: 2005-03-16 19:44:43 UTC
From: Henry Kolesnik <kolesnik@sbcglobal.net>
Message-ID: <L00_d.15993$yp.15871@newssvr11.news.prodigy.com>
Source record: 12315

I took the bottom off the TS-2000 and moved the jumper from normal to DX and all AM BCB stations increased from 4 to 5 S points and the strong one went from 10/9 to 20/9. I picked up 7 stations that I couldn't detect before but none registered on the S meter but I could hear better than 50% of the what the announcer was saying.

ace, you are a fucken moron. I'm finally putting you on ignore. I have put some people on ignore for spamming, some for racism, but I'm putting you on ignore cause you're a unpleasant human being and that's the honest to G-D truth. You are a depressed washed up person. It's so obvious you are jealous of me and you have good reason to be.

Now, I realize you have an inferiority complex. If I sounded like a teenager and was all alone all my life I'd be mad too. If you see other people happy, you can't take it. If you see someone DX a nice frequency, you can't take it and have to try and top them or belittle them.

You think you run this NG but you don't. You're basically a lazy faggot who knows how to operate one radio and this is your anchor to reality and fame. I believe you can't even afford to buy a R-75 so you'll sit with that old equipment for a very long time.

I'm shocked more people haven't put you on ignore and out of their life for good. You don't deserve to be around good cultured people. Therefore, you're off my screen and off this NG for me forever.

Enjoy your sad, lonely depressed life and remember how much better I am then you which you're fully aware of already.

Bye tard boy....

2833. Re: FRG-100 FM pickup problem - solved (long)

Newsgroup: rec.radio.shortwave
Date: 2005-03-16 21:12:14 UTC
From: fcathell@msn.com
Message-ID: <1111007534.138972.237320@l41g2000cwc.googlegroups.com>
Source record: 12321

Pete - I just had to respond to your comment about the FRG-100 audio mod. This is the 3rd FRG-100 I've had and it does not have the typical "muddy" audio and it appears to be totally stock inside. I didn't even do the mod because it sounds fine as it is. I did change the AM wiiiiide filter to a more narrow one with better skirts and so far, other than the input connector mod that's all I've "butchered" on this 100. BTW, I have an older Icom R-72 that I acquired off of Ebay and it's an excellent receiver in my estimation. No FM problems at all. Only drawback is they forgot to vent the cabinet!

Just when I though shortwave was alive,
Icom discontinues the R-75.

Listening to signals before its too late,
on my discontinued Drake R8.

Not much shortwave like days gone by,
just the bantering of some religious guy.

Bring back the signals of yesterday,
before all the radio's go away.

Jewish extremists plot takeover of Jerusalem holy site: TV
Published: 3/16/2005

JERUSALEM - Jewish extremists are plotting to take over
a disputed holy site in Jerusalem in a bid to sabotage Israel's
planned withdrawal from Gaza, an Israeli television station
reported Wednesday. Channel Two showed a video of the
plotters, including rabbis and far-right extremists, in a meeting
to discuss ways to occupy the site which is known as the
Temple Mount to the Jews and the Noble Sanctuary for
the Muslims. The meeting took place at a secret location
inside the Old City, where the site is also located, and involved
representatives from 30 groups, the television said.

"We must conquer the Temple Mount to abort the
withdrawal plan. If 50,000 people go to the Temple
Mount, our Father in heaven will see and the (Israeli)
institutions will not be able to remain indifferent," said
one participant.

The participants discussed whether to stage the
action before or after the start of the planned
pullout of Israeli troops and settlers from Gaza
that is due to be launched in July and last three to four weeks.
They are to hold a "dress rehearsal" on the Temple Mount,
or the Jerusalem mosques complex that is the third holiest
site for Muslims, in three weeks time, according to the television report.

Dozens of police reinforcements were deployed around
the compound in mid-February for fear of an attack
by Jewish extremists trying to sabotage Prime Minister
Ariel Sharon's Gaza plan.

2840. Question about AM radio reception, equipment, and expectations

Newsgroup: rec.radio.shortwave
Date: 2005-03-16 22:33:30 UTC
From: mballast@hotmail.com

After reading some of the sites dedicated to extending the broadcast range of regional radio stations, it occurred to me that I could avoid paying the NFL for streaming broadcasts of NFL games not available in my area.

I'm particularly interested in pulling in the big Chicago AM radio station 780 WBBM. I'm a transplant Bears fan that now lives in the Tampa area.

Is it possible to get reliable reception from that distance, with say a GE AM/FM "SuperRadio" III, 7-2887? Or am I just dreaming.

Thanks,
Mark

Probably not... however, and I hate to say it, it's my understanding that WBBM
is now streaming on the internet.

LUCKY,

I have an Icom IC-R75 with the Kiwa Mods and like it very much.
.
For the a Shortwave Receiver in the $500-$750 Price Range it
has many good features; performs really well; and is a very
good value for the Money.
.
IMHO - If the replacement for the Icom IC-R75 is a better radio
and still priced in the $500-$750 range it should sell very well.
.
However, if the replacement is in the $1000-$1500 range. Then
I would have to consider a Drake or JRC as being the better
vakue for that much money.

Hi there RHF

Yes, I wouldn't pay $1500 for the R75 either. The real deal is it's price/performance. After all rebates and deals I paid $425 shipped. Plus it has DSP and twin PBT and does the best ECSS and SSB. How in the world can you beat that for a brand new radio?

I haven't done any mods yet. I might do the sync mod after the warranty is up this Oct. I spoke to a person at HRO that I know. He said nothing is up with the R8b and R75 being discontinued. He told me he has never seen even a good radio last for too long. That they change models and eventually all get discontinued.

Yes yes! I hope Icom comes out with a new higher end receiver for the same money. We deserve it darn it!

Lucky

@f14g2000cwb.googlegroups.com:

General interest, and not necessarily a specific response to your post.

Go to Google, enter http://www2.ocn.ne.jp/~ghq777/BCLradio.html in the
search box, press search, and the result will look like this:

BCL?????? - [Translate this page]
???70??BCL??????! 2004/04/09 ??????.
??, ???, ? ?, ? ?, ??&#65533;??&#65533;?? ...

Well, not exactly, as the question marks are actually squares. Anyway,
click on the [Translate this page] and viola, you at least have a
chance to read some of it, as well as pages that spawn from it.

Is this one of those reverse psychology lessons? The receivers look
fairly nice, at least those that I previewed.

Regards.

Hiya, Mark...

I'm in New Jersey, and I can hear WBBM on my GE-SR III. I'm listening to it right now, as a matter of fact. I tuned in to see if I can hear it tonight. For the moment, it is audible, but there is QRM from stations close to me. I can now hear it much better because I just switched to my Sony 7600gr. I can take advantage of its ssb selectable am sync. It is a huge help for MW DXing. Currently, they are playing a radio commercial for a place called "Napoleon Taylor". So... Yes... I can hear it, but, the problem is, the signal is going to fade at times to the point where wont hear anything. Also... From my experience with DX'ing the big 50 kilowatt AM stations, you can hear them at night, and not nearly so good if at all during the day. I love football myself, so I know that the games are on during the day, when it is hard to hear far away stations. Also... You are down in FL. Even though there is no local clear channel stations in FL @ 780 to squash WBBM, you have a lot more distance from the WBBM transmitter then I do. Distance attenuates signal. In short, even if the signal does make it down there, you still cant listen to it practically speaking. If I tried to listen to a Monday night game from here on WBBM it would be like... "Fourth down and goal... One second left in the game... The Bears need a TD here to win it.... They line up... Signals being called... Here is the snap and..... SSSSSSSSS...SSSSSS......Crackle... SSSSSSSSSSS....

That is the best you could hope for. Just bits and pieces of audible but messy sounding audio followed by long periods of just static....

Hope that helps !!!!

Michael

There was an after-market third-party variable crystal occilater you could
buy
or build that gave the R-4C General Coverage. It was published in QST I
beleive.
I built one and my R-4C performed excellently as a SWL receiver.
Too bad you missed out.

I am picking up WGN Chicago pretty right now on one of my old off the wall no name brand AM/FM/Shortwave radios I bought for about two or three dollars at a Goodwill thriftstore about six years ago.It is kind of staticky right now but it will get better later on in the evening.I just now picked up WSB 750 Atlanta while I am looking for WBBM.I just now heard a guy mention O'Hare Airport and then he said 780 WBBM Chicago.It is kind of staticky too with fadeing in out,it should get better later on tonight.Only the antenna that was put in the radio at the factory is the antenna this radio is useing.Hey,lay off them ccrane radios,they aren't worth a crap! I know that to be True.

I know...they repair S800s and for a time you could order 800s directly off the Drake site. What's odd is that they're nopt doing anything comparable for the E1. There's at most a passing mention of the E1 on the Drake site. Why the disparity, I wonder?

Not only the R75 and the other major shortwave reciever are discontinured, but according to this website I found, ham radio has also been discontinued and extinct for years?

Then I wonder what I'm hearing on the frequencies formerly used by ham radio operators?

hmmm... It must be signals from the past. LOL

The guy that wrote this website is serious.
He wrote

"How they do it in Frequency, they use a very particular radio system called HAM Radio. It is an old system not in use today and there would be little interest in using it today since nobody is using it anymore. On top of this, you need a license to operate one."

jmg:
Those DSP devices can be expensive. That display is expensive. The main
reason Ten-Tec was able to sell the RX-320 for $300 was because they didn't
have to supply a display or the the controller to run that display. That's
typically about 60% or more of a receiver's cost.

The R75 doesn't have DSP, it's a completely analog receiver. You can buy an optional AUDIO dsp unit for the R75. You can buy an audio dsp add-on for ANY shortwave radio. I use one with all my receivers.

I too just bought a HF-150 and I am happy with the performance. I guess I got lucky with my purchase as the radio seems to be in really good shape (I'm the lucky guy who bought the set with the speakers:).

Scanning the different stations using the tuning knob seems to take quite a while (I'm impatient), so I ordered one of those wireless remotes that can have a variable tuning rate. They say that you can also access the memories with the remote which the keypad can't do.

You might consider one of those as a nice accessory if your radio didn't come with a keypad. I don't know how well they work, though. I haven't gotten mine yet to try it out.

Good luck with your restoration.

Albert.

I got a chance to use my friends R-5000 for a few weeks. We swaped radios and he got my R-75. I really liked the R-5000 a lot. The audio was fantastic and the features were great. I also apprecieated the dual VFOs and notch too. I'd love to have one. My fried that I swaped with liked my R-75 and wound up buying a used one for himself. He didnt do any mods to it. He uses it strictly as a ssb receiver for utility, ham and ecss dx'ing.

Just recently, I wound up doing another swap with another friend. This time, I got to use the NRD-545. I absolutely loved the way it looked and the DSP did some nice things, but I didnt fall in love with it because the audio was poor. I found it to be tinny and weak. I had posted on this ng a few months ago asking for info on the NRD-545 because I was thinking about buying one, and one of the things I was advised about was that the audio wasn't so good. Is that ever the truth. I'm not saying that it is a bad radio at all, I'm just saying that it should be better for all that money !!! The R-5000 audio is remarkably better then that of the NRD-545. I'd say that the R-5000 audio sounded almost as good as the R8.

Probably. That might protect Drake in case the E1 turns out to be
plagued by problems. In fact, Drake may be more cautious now, following
the difficult launch of the S800.

2894. Lowe HF-150 and DSP

Newsgroup: rec.radio.shortwave
Date: 2005-03-17 03:56:04 UTC
From: albert <aellis@mts.net>
Message-ID: <vc7_d.370$HQ6.3344@news1.mts.net>
Source record: 12482

I am new to the shortwave hobby and I just got a HF-150. Would it be worthwhile to get a DSP filter, like the Timewave DSP-599zx? The radio works very well with one of those portable reel antennas clipped on to the whip antenna. The radio doesn't seem to be suffering from any overload so I don't think that I need a preselector; I live in a small town that is quite a distance from any transmitters.

Albert.

I don't think it is a turnstile. The element configuration looks like an attempt to broadband it by making it larger in diameter. The label says "HF active antenna". Looks military. Probably a military portable unit.

Try living in North Korea for a few hours- you won't be making fun of
government conspiracies for long. One of the "conspiracies" does involve the
ownership of even your basic BCB radio. It could happen closer to home as
well.
Brian

I had an HF-150 a few years ago and tried a DSP unit with it. I hardly used the DSP to be honest with you and eventually sold it. I would spend some time and try to get an outside antenna up fed with coax and a matching transformer. This will make a big difference over the reel antenna. Despite its size and simplicity the 150 is an excellent radio.

the satellit 800 kills most of them. it has been my desktop receiver for a couple of years now. that selectable sync puts it way over the top of any receiver Kenwood or Yaesu ever made. and I have had EVERY Kenwood and Yaesu HF receiver made in the past 25 years. they were pretty useless compared to the 800. you have to spend a lot of money to beat the 800 for SWBC DX (don't get it for utes, get an R75)

I thought of that possibility but the thing is only 7 foot long. Making
it a few inches wider at that length would not do much in the way of
making it broadband.

I've never seen that configuration in an antenna before.. the thing looks
most to me like an element from an electric furnace.. (that's only what it
looks like.. I can see from the label it's an antenna)

a
> GE AM/FM "SuperRadio" III, 7-2887? Or am I just dreaming.

Probably depends on the selectivity, and if any local stations
near 780 in Fl....As a test, I tried getting it here in Houston,
"2AM", and it's coming in pretty good. *But!*, I have a local
on 790, and with normal filters, it's no good...But, I'm using
the *real* narrow AM filter, and it's quite listenable, just
real flat audio..
So it's not impossible by any means. I'd probably make a
loop, so you can have some nulling capability for unwanted
stations. The problem is not really signal, as they are strong
compared to say a ham, and that distance is nothing on 160m...
Unwanted stations will be the main problem...Also, sometimes
propagation will naturally be up and down...
BTW...I was using the ic-706 and my parallel fanned HF dipoles
as the antenna. Wasn't on the loop...So thats a good sign
sorta...Usually the wire is QRM a plenty...Multi stations
per channel usually...The loop could help the s/n a bit,
although the nulls work best on ground wave, vs sky wave..
They still help a bit on sky wave..or at least mine does..
It's a 44 inch per side diamond, and is on a rotating stand
in the room here...I have plans for a PVC version..
http://web.wt.net/~nm5k/loop5.jpg
Pretty cheap and easy to build...Can use with *any* radio,
as they don't require a direct connnection if the portable
has a ferrite antenna.
You can just place the radio near the loop.
But here, I feed with coax...
In the old days, they used to call the loops "sports
fan specials", or something along those lines, because
many people used them to listen to out of town ball

games, even 50-60 or more years ago. With a good loop, you can listen to groundwave out to at least 200 miles or more very reliably in the daytime. MK

If you're talking about DVD region coding, you're in error:

http://hometheaterinfo.com/dvd3.htm

Region Countries

0 No Region Coding
1 United States of America, Canada
2 Europe, including France, Greece, Turkey, Egypt, Arabia, Japan and South
Africa
3 Korea, Thailand, Vietnam, Borneo and Indonesia
4 Australia and New Zealand, Mexico, the Caribbean, and South America
5 India, Africa, Russia and former USSR countries
6 Peoples Republic of China
7 Unused
8 Airlines/Cruise Ships
9 Expansion (often used as region free)

Perhaps, but in a tough situation the R7 will still outperform the R8B.

I don't rely upon whether or not a receiver has 'sync' or not when evaluating it as a 'DX' receiver. And the S800 is *not* a comparable 'DX' receiver when compared to the R8 series.

Get the picture?

I agree with Frank: Your top priority should be putting together some sort of outside antenna. It wouldn't need to be anything fancy. The HF-150 it works best with a modest antenna. It should be outside, though.

As for DSP, my HF-150 works very well with a ClearSpeech filter (the base unit). I pretty much always use the dsp filter when listening to SSB. I never have it on when listening to AM broadcasts, though. The HF-150's audio quality is so good that I don't want to mess with it!

Steve

5 minutes? You obviously have no clue as to how to operate a receiver.

That's unfortunate... but it's good that you've found a receiver you are capable
of operating.

Enjoy.

You could also try to see if you can get it on a good car radio (most OEM radios have decent am's in them). Whether or not you can receive it reliably has much to do with their particular coverage...the 50 Kilowatters vary tremendously in their coverage areas. I find that "listenable" nighttime reception of 600-700 mile distant signals on decent radios is about 50/50...meaning they can vary from excellent some nights to non-existent others.

Since there are so many variables, you won't know for sure whether it is possible unless you try it for yourself over several nights. And, of course, as someone else said, you will get no listenable daytime reception at that distance.

I've taken some solace from having my own am transmitter (SSTran), so at least I can play my Old Time Radio shows and old music through my old am radios. It's not the thrill of long distance reception on am and sw but at least I can still enjoy the radios. I'm going to remain optimistic that good old am and sw analog radio will continue for some time to come, even if it is on the decline. Hey...with all the new, inexpensive sw radios coming out of China, at least SOMEONE has faith radio will be worthwhile for at least a bit longer.

Probally a govt mil.spec antenna that didn't work out too good? I know of a Brit site that might can shed some light on that antenna.It is a place in UK where Military Vehicle collectors get together from all over the World,a giant swap meet.I will try to find a link to that site later on.

Here goes that old refrain again.(I once read somewhere) Look around in the auto junk yards in your area for Japanese auto/pickuptruck radios which date back to the 1980's.I once read somewhere on the intenet that some of those older model Japanese auto radios are good at picking up long distance AM stations.(Shortwave is the higher end of AM) Someone in this news group probally knows more than I do about that and can tell you how to properly set up older model auto radios to use in your home.

That's an unusual one. I've seen exactly one Hitachi SW, and that was a small portable at the original EEB store in the early 1980's.

He has some interesting receivers that I've never seen but would love to own. The RF1010, and FR6600 look interesting, but are probably impossible to find outside of Japan.

The website owner does have a rare copy of the small table version of the R-300. It was a little known model that was compressed especially for for apartment owners.

5
> minutes of manual knob twiddling.

Not my Sat 800 running a 50' random wire through
a 9:1 transformer. Too much bleedover, even with the 4
bandwidth using USB sync. The 2.3 bandwidth is too
narrow for decent fidelity for me, unless I'm actively
listening with no distractions. If I want good enough
fidelity that the kids can dance to it, I want either 6 or
4, and 6 is hopeless and 4 is still too much.

> I know which method *I* prefer. YMMV.

Ha. I've listened to enough broadcasts to know that
my S800 ain't perfect. Oh, it gets rid of some hets and
some splatter, and better than most portables and
portatops, but using the advanced tools on the
regular tabletop you can eliminate a heck of a lot more.
After all, if what you say were completely true, then

why do people pay cash for an IC-R75 or R8B or NRD-545 or 7030?? Or why are some of the Kenwoods, Icoms, JRC's and Drakes of the past so valued?

There are a fair number of stations operating on 780kHz from Mexico and Cuba, with night-time operations that will be a problem for you, no matter what receiver you use. Probably the worst interferer will be CKMC in Moa, Cuba with 1kW of night-time power, non-directional.

I live about 275 miles from WBBM, and their night-time signal here often has fairly weak, but audible Spanish programming under it from one or more co-channel stations.

Better than the R-5000 with the optional filters? Just
curious, since I've had some success DX-ing with
the S800, but an R8B it ain't. And yes, I can agree with
the utes and ham signals, a notch would come in
awfully handy to zap those pesky hets.

I enjoy my Panasonic RF-B600 too. It get's lots of stations and is
just a lot of fun to use. But outperform something like a Kenwood
R5000...no way. Same goes for the 800...a nice radio (if a bit pricey)
but not in the same league.

The summary of this review is that it is a nice radio for program
listening. And that seems to be the consensus on Eham where reviews
tend to gush more than complain.

You sir, really wish that you were the guy who SOLD this radio
to some *schmuck* on e-Bay for $560.05 !!

Don't knock em....JOIN EM!!

I have junk in my garage boxed up from hamfests that I
bought for pennies-on-the-dollar over 25+ years ago.

Today I have sold approx 35% of this "ham junk inventory"
for almost a 700% clear profit over what I've paid for it
and I still have 65% of stuff I ain't even un-boxed and listed yet
in the loft of the garage !

I say, if the "market" wants to pay that kind of money
for useless crap, then I am VERY HAPPY to oblige
them. :) :) :)

(plus I tack on an extra $15 per package for S&H over
the actual ship cost...and guess what...no a single complaint!)

----> I PHUCKING L O V E E-BAY !!!!!!

IT IS THE BEST THING THAT EVER HAPPENED TO HAM RADIO SELLERS.

The 'tards are either in 'shock' over someone paying what they perceive to be a fair price or they will try to insinuate that sales like that are some type of sham where the goods never trade hands.

This is the best entertaiment I've ever had in my life.

Absolutely boggling.

Hi Steve

Yes the audio quality on the 150 is just too good to adulterate with
anything except when absolutely needed.

Hey, I almost bought a Lowe HF-225 last night for $240 but the seller was in
the UK. Shipping would have been 35GBP or like $70 so I turned it down.
Plus, I hate thinking how the radio would be bounced around all the way from
the UK.

Lucky

Pastor Peter J. Peters is on 12.160 right now (12:00 EST / 17:00 UTC) teaching on A Biblical Look at the Farm Problem.

It will repeat at 10:00 PM EST / 03:00 UTC on 5070. He'll also be on one hour before this, but it will be a different message and he may be on "live" the first hour.

He can also be heard on the net at http://www.scripturesforamerica.org and click on live streaming.

The message will also be archived at the above url.

Oh, he's also on satellite on Telstar 5 - audio/radio only.

2973. Good Guys Alert (was "Need Help with my HF-150")

Newsgroup: rec.radio.shortwave
Date: 2005-03-17 17:11:22 UTC
From: John Schneider <thecop@optonline.net>
Message-ID: <%Si_d.3015$dt6.655@fe08.lga>
Source record: 12510

I just wanted to publicly thank Lucky, Steve, Dale and most especially Pete, KE9OA who offered to help me when I thought I had a serious set of issues with my radio. Turned out that, despite what the manual might indicate, I need to power my radio with a 500mAh power supply as opposed to the 300mAh I was using. Once properly powered the radio works wonderfully. Anyway, my point is that, despite the off topic and often incoherent ramblings on this newsgroup, there are knowledgeable, intelligent people willing to help when asked.

Thank you all again.

I'm speechless.

I'm afraid to leave my house for fear that I'll be kidnapped, held against my will in a cheap hotel and deprived of sleep until I've been 'programmed' to appreciate the merits of the 800!

Any day now I just know that someone's going to argue that the Grundig Mini World 100 PE (perhaps suitably modified) is superior overall to the AOR 7030+. It's just a matter of time.

Just received the IBA A-05 schedule, which still shows several English broadcasts as well as other languages, but the spreadsheet is missing the times, just the languages and frequencies. It does state:

``According to IBA request all broadcast cease at 30.06.05 meaning NO shortwave``

So we shall have Israel on shortwave for at least another three months!

Can't we all just get along???

Seriously though...some people are collectors. I didn't look too closely at that auction, but it appeared that the receiver in question was in good condition, so that price doesn't seem too outrageous for an Icom.

An R390 or 390A is superior to any sandbox. Your average 5 tube
superhet from the early 60s is superior to 99.99% of the transistor
radios around today.

Golly gee -- my take on all this

1. Why would you be concerned as to how folks spend their money ?
2. An auction is just that -- folks bid what they think it is worth (right or wrong, dumb or shrewd)
3. There are lots of megabuck buyers out there. Money is no object.
4. Collectors live in a different world than you or I.
5. You really don't want price fixing do you ?
6. Free enterprise is a wonderful thing - think about it.
7. Caveat Emptor sez Caveat Lector

I bid, therefore I am

How localized are these deep fades on Medium Wave? In other words,
would a couple of antennas (or receivers) about 100/300/1000(?) feet
apart make it possible to dodge the fades by switching from one to
another?

Not sure, but it may be. However, since you can connect to the web I expect you can install from the web. You can probably also install directly from a hard drive.

It's a powerful little radio with lots of features. With the digital interface you can choose from several different sources and can even download a manual to help you write your own interface to it.

Could be. Car radios can often be quite good as far as reception, but I wonder if that is due to the fact you are driving outside, without buildings and other structures in the way. My 2004 Chrysler's stock radio gets excellent reception on AM in the evening. Here in Wisconsin I can pick up the big AM stations from Minneapolis, St. Louis, Dallas, Atlanta, New York, Ontario, and so forth.

Today, our household mourns the loss of Andre Norton.

Most people who know of Andre know her as a prolific writer of science fiction and science fantasy books. Pat and I know her as a friend, a wonderful, giving person who was well worth knowing.

I personally have known Andre for only the past two years, having met her and her beloved family of cats on our last trip to the US on vacation. Pat, however, has known her for decades and held her as a close friend and confidant over the past 20+ years. Her passing is hitting Pat very hard, even though we've been following Andre's decline through her most recent illnesses. She will be missed.

Andre Norton. Author, artist, friend, confidant, philanthropist, was 93.

Rest in peace, kind lady.

>!You are crazy,and really have no clue about Winn Dixie,

YOU don't get the point at all do you? The point is about some SOB at Winn Dixie calling the law because a lady disciplined her child! They waited until she had paid for her groceries and then threw the cuffs on her! I called SEVERAL WD stores and talked with a manager. NONE of them would assure me that this was not the official policy of WD. I assured them that I'd not give them my business until I read they had OFFICIALLY changed their crappy policy. I RECOMMEND YOU ALL DO THE SAME.

One man's loss is another man's gain. If this bunch goes out of business I'm sure someone else, perhaps someone without a total disregard for the rights of customers and parents, will take their place. May this come to fruition soon!

Would you not buy your groceries from another "great supermarket" if there were no WD? Or would you stop eating? NO. Neither would others. The demand would still be there. As to the employees and their retirement accounts. YOU nor I know that the funds are there now for their retirement. The good employees can find a job somewhere else, perhaps with a better company. The ones who are riding the wagon because of their "seniority" and are not carrying their end of the load need to be let go anyway. THIS could be part of WD's problem now.

YOU tell ME -- AND THE WORLD -- where I have lied! No. You can't. You just make your lying accusations, tell how "great" they are and blame WalMart for their demise when it is STUPID MANAGEMENT! May every one of them go through all that the lady in Atlanta went through!

Good Day! :-)

From Drudge (have you ever gone to the Drudge Retort? Just go to
http://www.drudge.com/ I guess this individual registered the domain
before Matt had a chance, it's a spoof site).

Anyway, on the regular Drudge today, the following:

US troops shoot dead Iraqi general.....

http://www.abc.net.au/news/newsitems/200503/s1324274.htm

Now what is the sense in shooting a dead general?

Dr. Artaud

The above example is fresh, but here is a list of other headlines that
had multiple meanings.

"http://funnies.paco.to/Headlines.html

Some are just slips of the tongue

Grandmother of eight makes hole in one
Deaf mute gets new hearing in killing
Police begin campaign to run down jaywalkers
Stiff opposition expected to casketless funeral plan
Two convicts evade noose, jury hung
William Kelly was fed secretary
Milk drinkers are turning to powder
Safety experts say school bus passengers should be belted
Quarter of a million Chinese live on water
Farmer bill dies in house
Iraqi head seeks arms

Some become unintentionally suggestive

Queen Mary having bottom scraped
Prostitutes appeal to Pope
Panda mating fails - veterinarian takes over
Child's stool great for use in garden

Grammar often botches other headlines

Eye drops off shelf
Squad helps dog bite victim
Dealers will hear car talk at noon
Enraged cow injures farmer with ax
Lawmen from Mexico barbecue guests
Miners refuse to work after death

Two Soviet ships collide - one dies

Once in a while, a botched headline takes on a meaning opposite from the one intended:

Never withhold herpes from loved one
Nicaragua sets goal to wipe out literacy
Drunk drivers paid $1,000 in 1984
Autos killing 110 a day, let's resolve to do better

Sometimes newspaper editors state the obvious

If strike isn't settled quickly it may last a while
War dims hope for peace
Smokers are productive, but death cuts efficiency
Cold wave linked to temperatures
Blind woman gets new kidney from dad she hasn't seen in years
Man is fatally slain
Something went wrong in jet crash, experts say
Death causes loneliness, feeling of isolation"

> Nothing beats a tube radio for long distance medium wave reception.

Thats fairly silly...Whether it has tubes or not will
not be a deciding factor. He wants a radio with good
selectivity. When I was listening to the station last
night, I was *not* using a tube radio, and to tell you
the truth, I doubt any of my older tube radios would
have had the needed selectivity to weed that station out
of the muck. A car radio would have been *useless*. A normal
tube radio with standard wide filters would have been *useless*.
But my icom with it's narrow filter was the cat's ass when
it came to weeding that station out, with a local "next door"
on 790kc. Not a tube in sight...
Sensitivity will not be a factor unless the radio is
"really" lame.

YOU decide if YOU want to support Winn Dixie! :-)

I rest my case.

Al

==========

The Atlanta Journal and Constitution
June 25, 1994
Mother slaps unruly son, is charged with a felony
Husband: 'She was simply disciplining a child'
By Bill Torpy

Nine-year-old Chuck Kivi was incorrigible while shopping with his mother at the Woodstock Winn-Dixie last month.

"He was running around and being nasty to his sister [Sarah, 12]; he kept picking and picking, saying hurtful things," Lynn Kivi said. "I told him, 'You don't speak to anybody that way.' He shot back, 'I'm not talking to you.' "

Kivi slapped Chuck's cheek. As they left the store and got in their car, a police officer approached. "He said an employee in the Winn-Dixie called and said I slapped my kid," she said. "I said, 'Yeah, I did. He was being rotten.'

"Another cop pulls up and tells me it's against the law in Georgia to slap your child,'' said Kivi, who moved here in 1992 from Illinois when her husband, Dale, was transferred.

Kivi was arrested, had mugshots taken, and was handcuffed and taken to the Cherokee County jail. She was charged with cruelty to children (a felony with a one-to 20-year sentence) and later released on $ 22,050 bond. Her husband, a marketing manager, cashed in his 401k retirement account to pay the bond and hire a lawyer.

"I'm disgusted with Winn-Dixie and with the police," Dale Kivi said. "They had no right to get involved. She was simply disciplining a child in need of discipline."

Woodstock police Chief Jimmy Mercer said he is surprised Kivi was charged with a felony. He said police are under great pressure in family abuse cases and that the difference between abuse and discipline "is a real fine line. Technically, you could do it [spank a child] on the bottom and get arrested.

"It could have just as easily been misdemeanor assault," he said. "The judge [Magistrate Kenneth Richards] saw enough cause to sign a warrant. If she's indicted, I'd be surprised."

Assistant District Attorney Dee Morris said he hasn't made a decision on the case.

The store manager said he thought customers called 911, but the police report said employees did.

The criminal warrant taken out by police says Kivi caused her son "excessive physical or mental pain" and that "this is a recurring event."

How did police know that? Chuck told them. "I get smacked when I am bad," he said, according to the arrest report. Chuck says he told police his mother "slapped" him in the store.

In 1990, proposed changes in child abuse laws brought an outcry from many legislators who said parents would be reported as abusers for spanking their children. The amended definition allows "reasonable forms of discipline . . . so long as any injury to the child is not more than minimal."

Kivi pointed out that Cherokee County schools - and many other school districts - use corporal punishment.

Mercer reasons that the officers and the magistrate pursued felony charges because the incident occurred in public and because Chuck was slapped in the face. He said police saw red marks.

"It aroused people enough that something bad happened, so they called," said Mercer, who said he has slapped his children, "but never in the face."

The magistrate could not be reached.

"This is persecuting parents for disciplining children," said John Earl, Kivi's lawyer. "One slap is not cruelty. Repeated slaps could be.''

The only thing I see in any way not totally kosher is that they waited for her to pay for her groceries. As far as contacting the police when you feel a crime has been committed (and striking a child, whether you or I like it or not, is a crime in every state now) you are obliged to contact the police. What Winn-Dixie did here was not only lawful and ethical, insofar as contacting the authorities, but was in fact required of them in most states.

If you don't like the law (and I for one feel that 'protection' laws have gone way too far.. we didn't have 'time outs' when I was a kid, we got whholloped.. and when dad got home, we likely got it again.), then contact your representatives and work on getting it changed.

M Ball,
.
Here is another "No Cost" Idea.
.
If you have a Celphone and also have a Friend in the Chicago Area
with the same Celphone Provider/Service; and you Celphone Provider
'offers' Free Modle-to-Moble Minutes... The have the Friend tune-in
the Bears on WBBM Radio and give you a "Free Call" :o)
.
If there is a Sports Bar in your Area that has the NFL Network
NFL-CHANNEL => http://www.nfl.com/nflnetwork/home
Hook-up an FM Wireless Re- Broadcaster to the TV Audio
and Tune-In from Home or your Car. :o)
.
.
LISTEN AND HAVE A BEVERAGE . . . ANTENNA THAT IS !
Got Lots-of-Space ? Try a 1288 Foot BOG Antenna pointed directly at
WBBM.

It is sad but true that shortwave is on its way out. In this day of satellite communication and the internet, I'm afraid it has outlived its usefulness. I speak as a SWL/DX enthusiast with many hours of my youth spent chasing the signals. I lived near a Voice Of America transmitter site and when I got a small portable SW radio for my 12th birthday, you couldn't have pried it out of my hands with a crowbar. There was something about hearing signals coming from the other side of the planet, along with the roaring jammers, that was nearly intoxicating. But times and technology change. The government-run SW broadcasters have realized their money is better spent upgrading to newer technology that reaches more people instead of something that is mainly of interest to radio hobbyists intent on a log entry or QSL card. It is more cost-effective to feed satellite programming to a distant country and then rebroadcast it there on local FM. The BBC has discontinued its shortwave World Service for this very reason. They are establishing a presence in the USA, and no doubt other countries, on TV and FM. Our local NPR station carries the BBC World Service overnight, and I'm sure they reach more stateside listeners that way than they ever did on shortwave. The average listener is not a radio hobbyist, has been preconditioned by FM to not tolerate noisy signals, and couldn't care less about chasing elusive distant signals
These days the shortwave bands are largely occupied by religious broadcasters intent on spreading the word of their particular denomination to the world. As they see it, they're doing God's work and I have no doubt there are people in remote areas out of the reach of TV or FM signals who listen and benefit from these broadcasts. I'm not slamming religion, but the religious broadcasters will probably be shortwave's last hurrah. But as the world becomes more urbanized, the transition to FM and TV will continue and shortwave will be relegated to the history books. Listen while you can.

I'm really not sure just how big that 100PE is, but maybe I could pull the cabinet on one of the Drakes and just set the darn thing inside?

I'm just looking for a way to improve my reception.

You mean a certain kind of programming will be relegated to history.
The bandwidth itself isn't going anywhere.

Steve

Hmmm. No response.

Maybe it's because every time he points out that he's not a racist, I point out all of the times that he's used the phrase "slanty-eyed chinks", etc. That's at least part of the reason, although there's certainly more.

So, in your world someone who doesn't trust in God can't be a right thinking American, is that it? Along with the implication that they can't love their country. And I'm not talking about DaviD here. I'm talking about anyone who doesn't meet your criteria.

Yeah, guess that might have been a possibility, but now the R8B is discontinued.

I suppose I could still set up shop to do modifications though.

I will install your 100PE into your Drake R8 series receiver for $59.95 +
shipping. Installation of the 100PE into other receivers upon request, please
call for availability.

I may need some help due to the upcoming demand, are you willing to relocate JD?

I figured all the time that when the Brits time was up for Hong Kong that something like that was going to happen.I am supprised though that it has taken this long to happen.I did my five days R&R in Hong Kong in 1964 and I had an enjoyable time in Hong Kong.I went to the U.S.Navy Fleet Store in Hong Kong and I bought a Rolex Oyster Perpetual stainless steel wristwatch and I bought a Mido wristwatch too at the same time.The hotel I stayed in (but I didn't spend much time in that hotel,gals,ya know) was the Park Plaza or something like that.(I wonder if that hotel is still there? my room was on the eleventh floor) I nearly got run over once when I was steppin off a curb because they drive on the wrong side of the road over there,but you learn quick!

Source record: 12630

What does being tube or transistor really have to do with how good the
reception of a receiver will be anyway? Nothing, as far as I know.

Nothing really...There are good and bad of both types...
The real deal in hearing something like that is selectivity.
And unfortunately, that usually means more $$$$ for the radio..
:(
If you have the selectivity, you have it half won...
The rest is using the antenna/s, to null unwanted stations.
Now , some tube sets might *sound* better to the ear, than
some solid states, but thats a whole nother thing...
It's the filtering that is the main thing as far as the
audio quality. My icom has real good audio on AM, if you
are using the wide filter.
A R-390 would probably be real good, as I *think* it has
narrow filters for any frequency, including MW.
So yes, it would be great if so...My old Drake R4 would be
good *if* I had the optional low band converter..The drake
has narrow filters available, and they work anywhere.
But having tubes has little to do with anything, except
many the tone of the audio output. Being the Drake needs
the converter to work MW, the icom 706g is my best MW radio
right now. Hands down when it comes to weeding tough ones
out of the muck. It's "narrow" filter for AM is really
narrow..It makes "next door" local stations go on vacation.
I'm sure a lot of bigger modern rigs would be even better.
IE: the various 756/746 pro's, etc, etc...

RHF, just got back from 6 days business in Hong Kong. as
always, i hit a few shortwave shops. not an E1 anywhere.
i was told: next week/ don't know/ etc. but, in my march 24-
Time mag., there is an ad for the E1 on page 78. SO, is it
real, or memorex? and the death of the R8b and the icom R75
is the big topic all over Asia. i got my R8b from universal
last nov. 05. sure am glad i got it. and, i was thinking about
the icom. maybe grab one up and play with it later. used to be i
had too many portables, looks like you can't have too manydesk-
tops. and i still use my sat800 and the AOR ar3030 the most.
enjoy your soon to be rare Icom R75....

The news story was most likely written by the very people that murdered him.
It certainly reflects their intelligence and complete lack of proper grammar.

These geniuses are very good at killing not just allies, but women and
children too. It's a completely illegal and immoral war. Reichmarshal
Wolfowitz seems headed for the World Bank. Oh Joy...

Yeah, I was just about 12 when I got my first SW radio, except mine was
a tube Hallicrafters out of an old ham's closet. It fascinated me, but
that was in the days before widespread satellite usage, and long before
the internet. And it wasn't that long ago-1986.

> But times and technology change. The government-run SW broadcasters

> then rebroadcast it there on local FM.

Maybe in the short run, but satellites go bad and governments can pull
the plug on FM outlets. Most of the world doesn't enjoy free media and
low cost satellite dishes. That's the main problem I see with this rush
to satellite, FM and the internet-the plug can easily be pulled if the
government decides to do so, or there's a revolution and the local
transmitters are commandeered for Voice of the Revolution Yadayada. The
West has lost more than one SW relay in a poor, unstable country to a
rebel army, and the pattern is bound to repeat with FM simulcasting. The
internet? It's sent over phone lines, and those are easy to cut. More
technologically advanced governments can block websites or email. I
suspect that Americans will soon find all this out the hard way.

> The BBC has discontinued its
> shortwave World Service for this very reason.

Uh, no they haven't. A url was posted in this group recently for the WS
shortwave frequencies.

> They are establishing a

> less about chasing elusive distant signals

Probably true, especially in America and to an extent in Europe. This tendency in America is why the VOA has been more or less shut down and the IBB is now running rap music with Arabic speaking announcers in the Middle East to combat terrorism. I wonder what will happen if the insurgents in Iraq get ahold of a Sawa FM transmitter and suddenly Destiny's Child is replaced with anti American rhetoric. Will the US send soldiers in to recapture the transmitter? Will the US public be told that 20 Marines died in the name of Radio Sawa?

> the history books. Listen while you can.

That sounds like a very America centered viewpoint. With the FCC focused on AM and FM, SW licenses are being handed out like candy and every fundamentalist who can pay the electric bill can get on the air. But in the rest of the world governments control the airwaves and decide what gets broadcast. In the rest of the world, the airwaves are considered to be government property. So anything from government approved religion (Saudi Arabia) to government propaganda (China, North Korea) gets on the air, and if you're not connected to the government you're out of luck. Here again I should note that in most of the world if some dictator, potentate or warlord decides to pull the plug on the local FM station's simulcast of the BBC, the plug gets pulled and the listeners get treated to local politics instead.

If you want a cheaper "freeze mist", use cans of "Dust Off" held upside
down. I believe they use the same chemical, but I get 4 12 oz. cans
of Dust Off for under $11 at Costco, while I haven't seen a 6 oz. can
of freeze mist for under $8 in 30 years.

** U K [and non].
BBC WS TO FURTHER REDUCE FREQUENCIES TO THE AMERICAS WITH A-05 SCHEDULE

I was aware this was forthcoming; thanks to Kim Elliott for flagging the specific link. Remarkable that the BBC somehow can't fund a transmitter for an hour (0100-0200) somewhere that could reach Eastern North America...such as WYFR (which they already use) or WHRI (the old WSHB). Even at $100/transmitter-hour this would cost $36,500 for the year.

See http://www.bbc.co.uk/worldservice/schedules/frequencies/index.shtml for the notice; here are the new frequencies as of the A-05 changeover:

[with site comments by gh; 6195, 15190, 5975, Antigua mainstays until now will presumably be Guiana French, Bonaire?]

To the Caribbean:

6195 1000-1100 UT
11865 1100-1300
15190 1300-1400
11675 2100-2130
15390 2100-2200 [with Carib Report 2115; Greenville?]
5975 2200-0100

To Central America:

5975 0300-0400
9605 1200-1300 [WYFR]

To South America:

5975 0200-0300
9825 0200-0300 [Ascension?]
11720 2130-2145 [to Falklands Tue & Fri]
12095 0200-0300 [Ascension]
15190 1200-1300

We'll have to rely on broadcasts targeting Europe, Africa and the Pacific (for our left coast friends) (Richard Cuff / Allentown, PA, Swprograms mailing list, March 14, via DXLD)

The link cited under Central American & Caribbean, South America, as well as links to frequency charts still show longer hours, e.g. 15190 at 1100-1700. Where exactly did you get this version? Glenn Hauser, ibid.)

A sympathetic source provided this information and advised it could be shared with others --- since it will become public in two weeks anyway. The charts at the page in question are the existing frequencies and times (Richard Cuff, ibid.)

The text of the message says that BBCWS will only be broadcasting for 1 hour on 15190 from 1300-1400 but the web page says that frequency will be on from 1000-1700. Which is correct? (Sandy Finlayson, PA, ibid.)

[Later:] Sorry Richard, I didn't read your reply to Glen[n] carefully enough. Given the BBC's unsympathetic response to previous complaints there is probably no point even writing but if people want to protest where do we write?

Where the loss will be really felt will be for Sportworld on the weekend which is not streamed online (Sandy Finlayson, PA, ibid.)

Unfortunately, Sandy, it's a done deal. This decision was made a month ago, perhaps even in late 2004 when 2005 budgets were being drawn up.

One outlet would be the "Write On" program -- I believe their e-mail address is write.on @ bbc.co.uk but that may be wrong. There's a web-based e-mail form for Write On at:
http://www.bbc.co.uk/worldservice/programmes/write_on.shtml

The director of the WS and Global News division is Richard Sambrook; the #2 person is Nigel Chapman, Director, World Service.

You could also communicate with the generic Audience Relations folks -- who are very diligent in forwarding messages to higher- ups -- web-based e-mail form is here:
http://www.bbc.co.uk/worldservice/us/contact/index.shtml

This development is particularly unfortunate for Canadians, as they don't have the listening alternatives we have Stateside -- there is minimal carriage of the BBC via local rebroadcasters, unlike the gradually improving state of this in the USA.

Officially, there is no subscription-based satellite radio, either, though the gray market ("grey market" up North) is increasingly robust.

There is heavy emphasis for 2005 in reducing distribution costs for radio -- with the resulting savings likely to be plowed into more radio and TV services for the Arab world. Shortwave is a relatively expensive method of distributing programming for the BBC -- after all, the BBC pays all the costs, the listener, none; by comparison, there is zero transmission cost for them for the PRI or the XM/Sirius feeds. There isn't zero marketing cost, though.

Ironic story: about 10-12 years ago John Figliozzi and I put out a survey at the SWL Fest (Shame on you, Sandy, BTW, for missing the Fest --- you're so close) regarding whether or not listeners would pay to hear their favorite international broadcaster if funding issues cropped up.

The majority of folks surveyed at the Fest said yes. What do you know, that's what has happened now, though indirectly: We users pay for satellite radio, and public radio in the USA is funded in part by direct listener contributions.
(Richard Cuff / Allentown, PA, ibid.)

I'm sure the folks in the Caribbean will be thrilled at no longer being able to hear Saturday Sportsworld. Any idea on the best reception from 1400 to 1700 UT? (Ted Schuerzinger, ibid.)

It's not just the folks in the Caribbean who will lose Sportsworld.

Essentially everyone in the Western Hemisphere is losing this great program. It really is distressing that the BBC has cut so many listeners off again (Sandy Finlayson, ibid.)

Who cares about cricket and other stupid ballgames? (gh, DXLD)

What follows is based on the current schedule ---

An educated guess for the East Coast would be 17830 from 1100 to 2100, conditions permitting, which targets West / Central Africa. Also 15400 from 1500 to 2300. Both of those are from Ascension for most of their times. You didn't ask, but here are some other ideas:

7160 from 0300 to 0700 might also work -- also from Ascension.

I haven't stayed up too late to monitor this one, but 11765 from 0300 to 0700 originates from South Africa targeting West Africa. We're somewhat in the line of fire for that. Both 7160 and 11765 performed reasonably well during my December and January French Creek DXpeditions.

The toughest time will be the evening hours -- 2200 to 0300 UT. That tends to be when African and European frequencies are off the air. Not exactly armchair listening, but it's what there is (Rich Cuff, swprograms via DXLD)

There is also 15485 and I THINK 15525 which sometimes work (Sandy Finlayson, ibid.) You mean 15565, UK during our mornings (gh, DXLD)

We'll have to see what frequencies the BBC uses after the clock changes, but I've had reasonably good success on the east coast with 21470 which at present targets Africa. I think that -- in the main -- it's going to take a decent outdoor antenna from here on out (John Figliozzi, Halfmoon, NY, ibid.)

Maybe those on the list who are regularly near shortwave radios during the day can do some bandscanning on European and African frqeuencies, looking for some alternatives for us. Best place to start for frequency lists:
http://www.bbc.co.uk/worldservice/schedules/frequencies/

With two children at home and a full-time-plus job during the week, my mornings tend not be spent near a shortwave radio. Thanks in advance (Richard Cuff / Allentown, PA, ibid.)

Richard, I found that 7160 comes in well at times here in Ohio (Chris Campbell, ibid.) That would be late evening (gh)

I'd be certainly willing to pay for BBCWS, but two issues comes to mind that have stopped me so far: - If just adding an hour costs some $30,000+ a year, I don't see how enough money could be raised from people who would benefit from that particular hour(s) added back into the schedule. But then again maybe the effort, however partial in covering the costs, would be the message needed more than the raising the full amount.

I'd consider adding satellite (Sirius is the one I'd likely choose at this point), but that doesn't provide the World Service coverage that I'd desire (Info/Entertainment is what I'd want, not 24-hour News) In the end, however, I feel hopeless on this one, as we have to take what we can get. They aren't listening to us anymore (Kevin Anderson, Dubuque IA USA, K9IUA, ibid.)

Kevin: Sirius is making a change to the BBC schedule it carries when the clocks change at the end of the month. Up 'til then it will continue to be the all news feed detailed on the BBCWS web site. After the switch to daylight saving [sic] time, the schedule will be the PRI-provided one that includes some (but certainly not all) of the feature programs currently heard on the Americas stream on shortwave and XM. Although the summer 2005 schedule is not posted as of yet http://www.pri.org click on "listeners", then click on "programs", then on "BBC World Service"], you can get an idea of what will be on the Sirius BBC stream by eyeballing the summer 2004 and winter 2005 schedules provided there. I can't speak for "Sportsworld" as it was
carried last summer, but not this winter. We'll have to see if that's a seasonal thing with PRI. Might not hurt to e-mail PRI about this, though (John Figliozzi, Halfmoon, NY, ibid.)

Kevin: It certainly appears that they aren't listening but I still think we should register our complaints, by emailing the appropriate places. I wonder just how effective World Service is going to be with this loss of transmission. Yes you can get SOME of their output on local radio but NOT during the day in most cases.

Maybe relays on FM in SA and Cent. Am. are better than they are here. And if the situation isn't great in the USA it is worse in Canada where I come from. In Canada there is next to no local relays and no satellite (Sandy Finlayson, ibid.)

The BBC describes the cutbacks as *adjustments* done "to reflect global changes in audiences` use of short wave." When BBC last released its audience figures in June 2004, the drop of its shortwave listeners was characterized as *significant*, but weekly global audience estimate fell only from 150 to 146 million because of a big rise in listening via FM (DXing.info, March 13, 2005 via DXLD)

** U K. Jonathan Marks on BBC cuts/changes/whatever #Critical Distance BV Weblog (p1 of 33) Sunday, March 13, 2005

What in the world is the BBC saying?
Still a World Service?

Can you imagine an announcement printed in the Times of London warning readers that the number of pages in the newspaper were to be reduced because there are fewer readers of the printed page?

Of course not. But BBC World Service seems to have a strange policy of announcing its gradual wind-down of analogue shortwave broadcasts. In 2001, former Director of the BBC World Service, Mark Byford, got into a needless discussion/ scrap with shortwave listeners because BBCWS announced the closedown of their English broadcasts on shortwave to North America.

When the time came, they just pulled the plug...talk about a build up to nothing. Had they simply reduced the number of frequencies beamed in that direction, few people (in theory) would have noticed. But to publicize it in such a way was simply a PR disaster.

Now they are at it again. If you check the BBC World Service schedules website it says From March 27 2005 there will be adjustments to the BBC World Service shortwave provisions to reflect global changes in audiences' use of short wave.
The number of hours broadcast on short wave in English, Arabic, Spanish and Portuguese for South America will be reduced. What on earth does that garbled syntax South America?

Doesn't it totally contradict other recent statements by BBC Managers that they have a strong commitment to shortwave, albeit a digital shortwave future - DRM? So it is a logical shift to digital - not a closedown - they should be talking about.
Or come clean and say that their policy is a network of FM stations in capital cities, with Internet as a fill-in and shortwave as a last resort (Jonathan Marks 3/13/2005 09:26:00 PM (via Dan Say, swprograms via DXLD)

E-mailed to BBC (Write On):

I'm profoundly disappointed to hear that you are AGAIN cutting your shortwave service to the Americas. The web is a great adjunct to an international radio service, not a substitute for it. If you are heading towards abolition of shortwave service (as it sadly appears) why can't you upgrade your services on local radio? Berlin and Chiang Mai both have 24/7 BBC on FM. North America has no dedicated BBC relays, but plenty for night owls at 3am. One might think you don't want to be heard in the Americas. (Blaine Waterman, Oakland, California, http://www.live365.com/stations/blaine64 March 15, dxldyg via DXLD)

It would not suprise me. I sorta forgot all about him
but when I heard him on the shortwave radio for
the first time, he struck me as a near carbon-copy
of the (late) G.S. I don't know if Melissia will bow
out gracefully and let him assume control of the UNC
but he would lit like....well...sorta like a 12" hotdog
inside of an 6" long bun....so to speak....

Here's his website: http://www.truthhouse.org/

Looking at that pic of him one would think if her
were not another funny shortwave radio preacher
that he'd be a natural born used car salesman or a
right wing news commentator on the FOX TV Network

The very fact that you performed this test demonstrates that you were at least able to entertain the possibility that the S800 had a weakness, and that, sir, is simply inexcusable. I realize that this is usenet and freedom of thought and speech is rampant, but asking people to suppose that the S800 might not be the best receiver in this (or any) world is going too far. There is no receiver in the world that can even begin to compete against the S800. There *could not be* another receiver that could compete against the S800. If you want to talk about high grade, military equipment....bring it on. The S800 is better than all of that garbage! I hope I never have to point any of this out again!!!!!

Oh, and by the way, I hope that that "That's why there was an R8B"
crack wasn't intended to suggest that the R8B is comparable in overall
performance to the S800. The S800 is to the R8B what a WJ100 is to a
Grundig Mini World 100 PE.

They should have had the cops do the arrest before they checked her out.
You know the cops weren't going to wait for the woman to bring the
groceries home, or even to secure them in any way, and neither was W/D.
That left the woman in the situation where whatever wasn't stolen was
thawed and unusable.

And if this was truly something abusive, they should have gotten her
arrested without giving her a long, leisurely shopping period during
which she could have rendered more abuse.

Right off the bat I can say what beats it: a tube radio hooked to a
really long, really high antenna.

Good Lord!! Now that's a collection. I'm reminded of
a quip I once used (stole it from a coworker) when my
cubicle had three SGI workstations in it: it's not just
a job, it's a CAT scan.

So you're the guy who stuck the Alpine coax speaker
in their Sat 800? I've thought about doing that for some
time now, but every time I also figure that I could just
as easily hook up an external speaker to it. How's the
sonic difference?

According to the BBC, the Europeans are getting restless, and are
starting to talk about putting their own candidate forward and/or
vetoing Wolfie. (Traditionally, the US runs the World Bank and the
Europeans run the IMF.) If that happens, expect Der Fuhrer (Bush) to
throw a fit and make all sorts of threats. The Euros, knowing the guy is
nuts, will relent and give Wolfie the job. Once in, Wolfie will cut
funding to poor countries and siphon off world monies to his friends,
over the protests of Europe. After all, poor countries are poor because
they're lazy, right, W? Of course, you won't hear about this on American
TV News, even if Peter Jennings would love to report it. Better keep
your shortwave radio fired up for the latest...

I notice on this website that he's very big on PETA, and preaches that we must show great respect towards the animal kingdom.

Since Dr. Scott had a sucessor ready to take over, I will now abandon my theory that the Rev. Scott's sudden passing had panicked Icom and Drake into abandoning Shortwave radio. Apparently it was something else which panicked them. Something certainly did...

3072. Demise of the former BBC/DW Caribbean Relay Station ... Carribean real estate costs

Newsgroup: rec.radio.shortwave
Date: 2005-03-18 04:01:56 UTC
From: Max Power <mikehack@u.washington.edu>
Message-ID: <d1djrk$8r6$1@xuxa.iecc.com>
Source record: 12557
Cross-posted to: rec.radio.broadcasting,rec.radio.shortwave

The real estate could be used for many things besides a resort.
In the Caribbean, due to the limited amount of land -- land costs will
always be higher.

Not all resorts have to be on the beach, in Fiji many are not.

If a multinational company is interested, a higher price may occur during
the land sale.

You could send a reception report to yourself and perhaps get a qsl card back..

It would appear you are on the leading edge of a new hobby. SX listening.
The shorter the distance between the radio and your transmitter, the more
valued the card. That's if you actually receive it. Station managers are on
tight budgets and are extremely lazy sorts. A small bribe accompanying your
reception report may help get that card.

I note that my primary interest, The World Today, will be on at 0200
during summertime and that South America has a couple selections for
this. It'll be harder to hear, but I should have 150 ft of wire fed into
coax for an antenna by June or so. Meanwhile, my Degen will gather dust.

> cost, though.

Also note that the Antigua transmitter runs on diesel generators, and
oil is at an all time high price. If they can move ttransmission to a
place with external power sources and just keep the bills paid they'd be
better off.

It seems like Arabs are the new golden children of broadcasting;
everybody wants to convince them not to blow up the west. But it's
unlikely that all the attention is having any effect, except maybe in
Iran.

> (Richard Cuff / Allentown, PA, ibid.)

Looks like the pay for service methods of broadcasting are edging out
the free ones. That's a constant theme in the entire Western World-cut
off free broadcasting and force the listeners to pay hefty subscription
fees in order to get anything.

I don't think there's a BBC relay in Sacramento. Closest one I can think
of is San Francisco, on the public service FM band. SF FM stations tend
not to be well heard here.
>

That would seem to be the policy-a network of FM stations in major cities (I know in many parts of the world "major cities" and "capital cities" are one and the same, but not in America), with incidental broadcasts on the internet and SW. Who exactly IS the BBC's intended audience, anyway? I would assume that they only want to be heard by the people in power, not the average guy, at a time when the average guy really needs the news.

There is just something about those old tube type radios whether they pick up better than transistor radios or not.The glow of the tubes and if it is a big wooden cabinet floor model radio with a big speaker it has a sound that is hard to match.Microwave energy will not kill those old tube type radios either,they will sit there and stutter for a while and pick back up where they left off.Tube type radios are a part of radio history,they are not being made anymore.(however,I wouldn't doubt there still are a few still being made for "certain occasions" just my opinion) I own quite a few tube type radios and I will not part with any of them.Rolls Royce was the last auto maker to hang on to tube type radios for their automobiles after all of the other auto makers had switched over to transistor radios.

Hi John

I'm really glad you fixed the problem. Pretty good going. Yes I'm using a Radio Shack 500mAH 12v myself. No wonder the radio's mode buttons weren't responding right. I like it when things work out for people. Life is hard enough as it is. Enjoy yourself now John.

> which she could have rendered more abuse.

You know, I didn't see anything to indicate that they -intentionally-
allowed her to go through the check out line and -then- slapped the cuffs on
her. It takes a while for police to respond. I'm guessing that someone made
the call, and she managed to pay her bill but not load up her vehicle before
the cops arrived. This whole argument is predicated on the belief that
something Al Patrick said is accurate, and here's the quote in question:

"They waited until she had paid for her groceries and then threw the cuffs
on her!"

Naturally, Al's going to see the conspiracy that doesn't exist here.
Unnaturally, people are arguing about it as if it was what happened.

And while I'm on the subject, here's more of that quote:

"The point is about some SOB at Winn Dixie calling the law because a lady
disciplined her child!"

Al seems to be missing something. If it's true that striking a child is
illegal where this incident took place, then it's equally true that whoever
witnessed the criminal activity was obligated to notify the proper
authorities. He needs to be railing at the people that created such an
obviously poorly written and poorly considered law. Not the person that
believed they were looking out for the best interests of a child.

The original one I had back in 1983 I had set up with the AUX-7 board. I don't
really mind not having it in the one I have at present.

Why shouldn't it indicate it as such if it still is? And at any rate the site above does not really indicate usage... merely that the transmitters are there, does it not?

DW is apparently scheduled to drop Antigua as of March 27 when the A-05 season begins. I'm not sure exactly when BBC will drop it, though it might be the same date.

So, if one wishes to log Antigua and *possibly* QSL it one had better get busy!

Outdated? I still use the R8 more than the R8B or the R7. I'd hardly say that it is outdated. While it lacks the more sophisticated 'synch' that the R8B has, that has no bearing whatsoever on its ability to receive, and for all practical purposes it is the same receiver.

I rarely find it necessary to use the 'synch' in either the R8 or the R8B.

The S800 is no match for the R8 series of receivers.

I take it that perhaps you are more of a program listener than a DX'er?

Your diet has to much RHC and liberal nut-case websites in it. This can
lead to mental constipation. I also suggest you stop listening to air
America. A sure sign of to much Air America in one's diet causes a
person to imagine that everyone in the Bush administration has a poor

German accent. This started out as a joke on air America but since it was repeated to many times weak liberal minds became imprinted with the idea just like the rest of the non sensical liberal dogma they spew. Soon all liberals will be speaking with poor German accents because they think it will help them get their point across. This is a very sad development but apparently there is nothing that sane people can do about it.

I recommend that a least once a day you align the point of your tin foil hat north and while hopping up and down recite softly to yourself "I am not a kook" for at least 15 minutes a day. That should help calm you down and clear your mind. Be sure to let us know how the treatment goes. If this does not work it's the heavy medication and straight jacket route I'm afraid.

He must not know much about PETA and their real agenda.

7 Things You Didn't Know About PETA
1.. PETA has stated repeatedly that their goal is "total animal liberation." This means no pets, no meat, no milk, no zoos, no circuses, no fishing, no leather, and no animal testing for lifesaving medicines.
2.. PETA has given tens of thousands of dollars to convicted arsonists and other violent criminals.
3.. PETA funds the misnamed Physicians Committee for Responsible Medicine 3, an animal-rights organization that presents itself as an unbiased source for nutritional information and has links to a violent animal-rights group called SHAC.
4.. PETA has used their contributors' tax-exempt donations to fund the North American Earth Liberation front, an FBI-certified "domestic terrorist" group responsible for fire bombs and death threats.
5.. PETA regularly targets kids as early as elementary school with anti-meat and anti-milk propaganda.
6.. PETA spends less than one percent of its $13 million budget actually caring for animals.
7.. PETA has repeatedly attacked groups like the March of Dimes, the Pediatric AIDS Foundation, and the American Cancer Society, for conducting animal testing to find cures for birth defects and life-threatening diseases.

Yes.

I had just read of this on the alt.fan.heinlein newsgroup. I have enjoyed many of Andre's earlier SF books for a long time, mostly the Time Agents and the Star Patrol stories, and the Solar Queen. I've only heard the very nicest things from folks privileged to have known her.

I was just thinking about the fact that she was a grown woman when my oldest radio was brand new! The world had gone through amazing changes during her life.

Requiescat in pace indeed.

Bob

>And unfortunately, that usually means more $$$$ for the radio..
Balderdash!

http://www.broadcasting-history.ca/engineering/Collins_R390a_receiver_lrg.jpg

''Probably the most revered receiver from the 1950s and 60s was, and
still is, the Collins-designed R390A/URR. Made by several
manufacturers under contract to the U.S. military, this radio was once
considered "Top Secret" because of its exceptional performance.

Many serious broadcast DXers managed to get their hands on the famed
R390, and the receiver is revered by many as superior to the
solid-state radios produced today. Hundreds of them have been restored
and maintained, and occupy prominent places in the homes of DXers all
over the world.''

''A personal experience which speaks volumes about the performance of
a properly working R390A happened only a few years back. A group of
some of the "heavy hitters" in the SWBC DX community, myself included
went on a DX'pedition to Cape Hatteras, NC. Known for its incredible
radio conditions as early as 1902, Cape Hatteras was the scene of some
of the early research done by radio pioneer, R.A. Fessenden. Today,
this remote location is a top choice for Medium and Shortwave
Broadcast DX'ers.

Quite an array of receivers had been brought along including a Drake
R8 and R8A. A pair of Watkins-Johnson HF-1000's, an R388, R390A and a
JRC NRD-535. It was a particularly good morning with extraordinarily
quiet conditions and a strong opening into the Pacific and Asia.
Around 1130 UTC I checked 3304.8 for the Radio Republic Indonesia
outlet in Dili, once Portuguese Timor. Although it had not been
reliably logged since the late 70's, it was there that morning weakly,
just a het in the R8A.

Everyone quickly tuned to the frequency determined not to miss the
opportunity to log such a rare station. However, even the $4,000
Watkins-Johnson receivers could not extract more that a few words of
copy. Our R390A was equipped with a Sherwood SE-3 synchronous detector
and I quickly tuned to 3304.8.

The R390A and Sherwood SE-3 extracted recordable audio from that signal when no other receiver we had could. That put the receiver in a whole new category not only for me but the others in attendance.

Of the R390A's I own, 3 are capable of sensitivity performances in the .07-.08uv for 10db S/N + N using the 4 kc filter and standard AM detection. I know of few receivers available today at any price able to duplicate of that level of performance''

http://www.r390a.com/html/history.htm

FEBC in several Asian-sounding languages every fifteen minutes from 12-1300 UTC on 15355, with strong interference from Turkey on 15350. Also in Mandarin on 9430 (much more in the clear). I'm kinda presuming because I wasn't able to hear/understand an ID, but this is listed in Eibi's database and WRTH March update. Is there anything I could listen for next time to confirm this? BTW, I'm in Portsmouth, New Hampshire with a DX-440....and a wire.

Cheers!

Erik

To all you who love Winn-Dixie and think they did right by calling the law on Lynn Kivi for slapping her incorrigible little brat named Chuck and getting Lynn charged with a felony so her husband had to cash in his 401K plan to post her $22,050 bond I have a suggestion - and a wish.

First, You can all send WD a $5 bill and tell them it is to help them get out of bankruptcy. IF there are enough of you the bankruptcy would soon be over.

Second, IF you are glad it happened, may the same thing, or worse, happen to you! :-)

Now, for those who think WD was wrong, you should spend your money some place else - ANY place else. IGA might be a good place to start if there is one close by. They don't sell your information because they don't COLLECT your private information. EVERYONE gets the same price whether you have a dozen cards or no card at all.

To those who cry about the massive big bad wolf called WalMart that is gobbling up all the little mom and pop stores, buy from a mom and pop place so they can stay in business. WD is NOT mom or pop! :-)

Al

Al...I have a better idea. Why don't you set up two separate chain letters with Winn Dixie and the supermarket-slapper separate beneficiaries. Maybe they will each give you a cut of the take for originating such a brilliant idea.

BTW, as a parent of three now fully grown children I never found a situation in public or private where it was necessary to slap a child. For those who subscribe to the sadist school of child rearing that kind of behavior might be appropriate. For most of us who raise children according to 20th century standards it isn't.

If the child is as you say truly incorrigible then the parent better figure out what they are doing wrong in the raising of that child and correct the childs behavior that way.

If I recall correctly I was possibly using a 90 meter band inverted vee at the
time, if not I was probably using a 70' wire running E-W.

Source record: 12718

Hello. I just got a PT-80, my second Sangean--I'm very happy with the WR-1 I've had for a year.

I've never used shortwave or longwave radio before, but I'd like to. This PT-80 picks up AM/FM fine but I can not get anything on SW or LW mode (just static or silence). I live in Washington State, is there a particular website that lists what frequency I must tune the radio in order to hear anything? Also, if I push the "BAND" button the radio rotates through AM/FM/SW/LW but not MW. The instructions indicate that MW is picked up with the PT-80. I hope this PT-80 is not just a lightweight AM/FM clock radio that cost $160!

Thanks for any advice.

Fritz

No, but if you read the article it states something about not being reliably logged since 1970... by whom I guess is uncertain, I would guess in the USA, but who knows.

If I recall I had reported both the reception and later QSL to NASWA, of which Chuck is (was?) a member.

At any rate, it was about 5 years or so previous to their dxpedition.

I'm quite pleased that we were all able to hear it, as it was indeed rather rare.

Among the first science fiction books I read in grammar school were ones by Andrew North/Andre Norton (I think _Sargasso Of Space_ and _Plague Ship_). I haven't thought about her in years, but, indeed her passing is certainly significant and a loss to the world!

I still think Al needs a couple of slaps to the head. I would still be
willing to volunteer to do it. I used to be very good at ass 'whuppin
lowlifes, scumbags, whackjobs, etc.

Al certainly qualifies..

I wonder how much "Altitude" I can get? My record was about a foot off
the chair. My boss got one guy at least 18" off the chair once. We
laughed about it for a long time.

I want to make Al fly!

Right out of the chair. Into semiconsciousness!

BDK

Well, first off thanks for all the great idea's folks!

I've signed up for the streaming WBBM. It remains to be seen if they'll "black out" that service during Bear's games due to contractual constraints - but definitely worth a try.

As for moving back to Chicago... it's a fantastic city and great sports town with vibrant media, world-class architecture, and a wonderful mid-western style, but DANG! those winters are soooooo looong!

For longwave, that's not surprising given you're in the US. No AM broadcasts on LW to be expected there. You might hear some beacons in SSB mode, but that's about it. As for shortwave, well, it should be more lively there, particularly on 49 though 31 meters. If there's really nothing around 6 MHz in the evening, then your PT-80 suffers from severe deafness.

> I live in Washington State, is there a

This one might be of help:
http://www.dxing.com/tuning.htm
Additionally, you might appreciate a book like the Passport to World Band Radio.

> Also, if I push the "BAND" button the radio
> rotates through AM/FM/SW/LW but not MW. The instructions indicate that
> MW is picked up with the PT-80.

<g> What's commonly called the "AM broadcast band" *is* MW. It's right between longwave and shortwave, thus mediumwave.

Well, from my point of view Steve has it dead right.
I have a pal who I DX with who has a Drake R7A and he beats us hollow with
the feint/rare DX he gets that we can hardly copy.
I have had experience of many famous boatanchors including the Racal R-17,
but never does their performance come anywhere near a modern Drake receiver
like the R8B.
I think the boatanchor lads still live in dreamland

I own a Sat-800, Grundig 400PE and DX-398 and my best friend has my DX-394B (he's "borrowing" it and loves it) and another friend now owns my Grundig 100PE. The Sat-800 here in Canada goes for $600 CDN (I got mine on sale for $550 over 3 years ago) and the R8B goes for about $2200 (about 3.7x - 4x more than the Sat-800, depending on how you calculate it).

I certainly believe the R8B to be better than my Sat-800, but not 3.7 to 4 times better.....

Take Care

I bough an R8 when they first came out in the early 90's. I don't
remember the date and use it about 10 years until I traded it in to
Universal for a R8B. In hindsight I should have kept it.

He's dead now (prostate cancer), but he was a very scary guy. A lot of 20-30 year old guys would take him on, and he would have them whimpering like little girls in a few seconds, and usually with teeth on the floor next to them. I have never seen anyone that could fight like him, at any age. He was still tossing drunks and winning fights at 69, just before the cancer got him.

One guy got a chance to leave, but he swung at him instead, and the fun began. When the cops came to pick him up, they had us call 911 to make sure he was ok. He survived, less about 12 of his teeth. The cops gave him crap about getting his ass kicked by a 57 year old "disabled veteran".

He looked at them, and said, "Yeah, but he's like some kind of a super damn 57 year old disabled veteran!! He kicked my f'in ass man!"

That he officially a disabled veteran (he was shot in the back during the Korean war) was the funniest thing of all. He was 40% disabled, according to the VA.

LOL!

Like the other poster says, try (at least this week until the schedules
change) the 6 MHz band. At 5 and 8 PM local time, there's Radio
Netherlands at 6165 kHz, and the BBC at 8-10 PM on 6135 kHz. During
the day can be pretty dead on 6 MHz, but they rebroadcast CBC-1 from
Vancouver on 6160. Morning, try for Radio Australia (5995, 6020, 7240,
9580, 9590, 9710, 11880 (kHz)) or the BBC (9740, 7160, 6195).

Medium Wave is another name for AM. (Technically, Medium Wave is
defined as 300 kHz to 3 MHz).

>lightweight AM/FM clock radio that cost $160!

I certainly believe the R8B to be better than my Sat-800, but not 3.7 to 4
times better.....

The van will pick you up tomorrow morning. When the driver and his attendants enter your home, simply follow their instructions. They're there to help you. They will remove you to the safety of a Satellit 800 re-education camp.

You're going to be okay now...

Steve

That's something a thieving snake would do. I'd just as soon see W-D
get what they deserve.

> BTW, as a parent of three now fully grown children I never found a
> situation in public or private where it was necessary to slap a child.
> For those who subscribe to the sadist school of child rearing that kind

> according to 20th century standards it isn't.

You have a not so subtle way of taking pot shots at God's laws.

Neither would "Dr. Spook" when he wrote his book on child rearing but it
seems he recanted some of his crazy ideas before he died. I am not
surprised at the antagonism this subject has raised as very few wish to
live by God's laws.

Check out the following scriptures. The first three are in the book of
Proverbs, KJV of the Bible. Solomon was the wisest man to ever live,
besides Jesus Christ Himself. I'd rather take his advise than all that
the likes of Barney Franks, Teddy Kennedy or anyone in the state of
Georgia can provide.

Pr 22:15 Foolishness is bound in the heart of a child; but the rod of
correction shall drive it far from him.

Pr 23:13 Withhold not correction from the child: for if thou beatest
him with the rod, he shall not die.

Pr 29:15 The rod and reproof give wisdom: but a child left to himself
bringeth his mother to shame.

You'd better get used to the rod. Jesus Christ may have came as a baby
weakling the first time. At least this is the way He is all too often
portrayed. However, He's coming again to RULE this world with a ROD OF
IRON! I suspect a lot of us used to the "democratic process" are going
to have a lot of adapting to do.

Re 12:5 And she brought forth a man child, who was to rule all nations
with a rod of iron: and her child was caught up unto God, and to his throne.

> If the child is as you say truly incorrigible then the parent better
> figure out what they are doing wrong in the raising of that child and
> correct the childs behavior that way.

I didn't make it up. I quoted a newspaper writer. And, I agree with you on one point. She should have been able to tell him ONCE and have it ended. This is probably a sign that she had "promised" him discipline a few times before and he didn't get it. I've seen parents who only had to look at a child, or snap their fingers once if necessary to get their attention, and actions were immediately reversed.

Now, I'll tell you a story of a mother who was forever threatening to slap a child's head off, or worse, and seldom followed up.

Once a little boy went across the street to get the mail and got hit by an automobile on the way back to the house. Later the little boy's sister said, "At least now we know mommy loves us." When asked what her twin brother getting hit with an automobile had to do with proof that "mommy loves us" she said the following. "Cause she always said if we play in the road and get hit by a car she was going to leave us laying there like a dog....But she didn't. She took [brother's name] to the hospital!" :-)

Oh, don't forget that the GA government which made such a law also thinks it's all right to murder UNBORN children by ripping them apart limb for limb. Better still (?) they approve of the alleged "partial birth abortion" which is to completely remove the child, via a breeched birth, except for its head, stab it in the base of the skull to suck the brains out and make sure that if it does live it will forever be a vegetable, then remove the rest of the head and start selling off baby parts. This is SUPPOSEDLY so some Alzheimer's patient can think a little better or some old lady can get rid of a wrinkle!

St. John 10:10, "The thief cometh not, but for to steal, and to kill, and to destroy: I [Jesus Christ] am come that they might have life, and that they might have it more abundantly."

I'd rather stick with God's word than all that mortal man can dream up!

Wow! This is amazing. Even more impressive (to me) than the raw courage is the obvious presence of mind and focus he displayed during the process. The two combined make an unbeatable combination.

I firmly believe that if everyone in the military and the government (not just the U.S. and western nations but worldwide) had this man's remarkable talents and skills, actual conflict could become a thing of the past. If this guy were running for President, constitution allowing, he'd have my vote insofar as foreign policy is concerned.

Fritz:

the radio probably works better on Shortwave with a good external
antenna;- anything from the 30 foot roll up Sangean (away from
electrical interference)
to a " real" outdoor antenna

Hi,

Actually I was quite surprised by the performance of my 100PE. I live in a high rise near downtown here in Windsor and the reception is no great hell. A few years ago I took the 100PE to the riverfront (a 15 minute walk from where I live) and was stunned by what it picked vs. what it picked up in our apartment or even on our balcony. As I'm sure you can guess, the performance of my 400PE and DX-398 on the riverfront vs. them in my apartment or balcony produce similar night-and-day differences. I've yet to take my Sat-800 down there and try
it.

As for my Sat-800, I'm extremely happy with it. I managed to get a "good" one. Needless to say, it was and still is an extremely mocked/put-down receiver by this group but that has never bothered me. My DX-394B which I was also extremely happy with was also highly mocked/put-down as well but was also never bothered by it. By the way, when I had my DX-394B, I had an external DSP unit (Radio Shack DSP-40) and a good external speaker hooked up to it. When I got my Sat-800, I did try it with these but found I really didn't need them.

My "dream receiver" is actually an NRD-545 DSP but it's pretty pricey here in Canada.

We all have our own receiver likes, dislikes and $$ budgets and have always respected than in others. When it comes to SWLing and if you're happy with what you have and/or it suites your wants and/or desires, who cares what others may think - I don't and never have.

The DX-394B that I mentioned in my 1st post more than suites my best friend's SWL needs and desires. The same goes for my other best friend that has the 100PE - I actually offered him my DX-398 once but prefers the 100PE (he's also my chiropractor and doesn't charge me for any treatments....which is why I offered him the DX-398 last year and I won't lie, I'm glad he turned the 398 down <g>)

What that saying....ah yes, I remember now, "to each his/her own"....:)

Take Care
Abb N

I just hooked up my Yaesu FRG-7700 after not using it for like 3 months. For an old radio, it still sounds so good and I really enjoy playing with it. I have the low pass external FF-5 filter for it too plus a FRA-7700. I don't need to use external speakers with it either as the stock speaker in it is wonderful.

Yes these older radio are fun to use. I see the FRG-7's and FRG-7700's keep going up in price on Ebay. Great collectors rig.

Lucky

how can a mass produced commodity be a collectors item ? a collectors item should be something that was not produced in large numbers or is old and many are not available any more. the FRG-7 is very common as is the 7700. and they are not old at all.

SX-88, that is an example of a collectors rig.

I am selling a brand new, in the box, never used UNIDEN BC796D mobile/ base scanner. Of course, as such it includes manual and all accessories. This is latest digital trunking scanner offering from Uniden which is fully APCO 25 digital capable with the digital card already installed and on board.

CHeck my eBay feedback under OFFDAN.

I am asking $475.00 which will also include UPS ground, insured shippng.

I will accept a US Postal money order, or personal check. Personal check will require my delaying the shipment until the check clears.

I will also accept PAYPAL, but at this price, will ask for an extra $10.00 to cover the PAYPAL fee.

E-Mail only if interested.

Dan

Not true. A collectors item is anything a collector of those items thinks it is. To me, the FRG-7700 is one radio in my collection of radios. They may have been mass produced, but they are over 20 year old and the supply is dwindling every week. To each his own...

ZCZC AP11
QST de W1AW
Propagation Forecast Bulletin 11 ARLP011
>From Tad Cook, K7RA
Seattle, WA March 18, 2005
To all radio amateurs

SB PROP ARL ARLP011
ARLP011 Propagation de K7RA

During this reporting week, sunspot counts were higher while geomagnetic indices were lower, a nice combination for HF operators. Average daily sunspot counts rose nearly 25 points to 60.7, and average daily solar flux increased nearly 22 points to 107.8.

This is a nice time to have a few more sunspots, because we are approaching that magic time of the equinox. Despite the old urban legend, the task of balancing an upright egg does not become easier at the equinox, but these days are nice for HF propagation. Sunlight is more evenly distributed across the northern and southern hemispheres, and it should be completely equal this Sunday, March 20 at 1233z. That is the moment of the vernal equinox on the first day of spring for the northern hemisphere, and autumnal equinox for the southern hemisphere.

Sean Fleming, K8KHZ sent some observations about this sunspot cycle, and suggested that the solar flux won't be going any lower. Actually we are probably a couple of years away from the bottom. The latest SEC prediction for smoothed 10.7 cm radio flux shows a smoothed value of 70 around September 2006 through April 2007. In the same March 9, 2005 prediction, they show the smoothed sunspot cycle minimum around December 2006 and January 2007.

You can see the prediction in the back of the latest Preliminary Report and Forecast in a PDF document at, http://www.sec.noaa.gov/weekly/pdf/prf1541.pdf. This same chart predicts a smoothed sunspot number of 22 for April 2005, but doesn't show the cycle rising from the bottom to a smoothed number of 21 until December 2007. This must mean that after declining to minimum, the solar cycle is not expected to rise back to the current level until early 2008.

Remarks in a recent bulletin about the biggest sunspot cycle of all, Cycle 19 back in the late 1950s, drew many email message with the same comments from hams who were brand new in the hobby back then, and active on either 10 or 6-meters. Many wrote, "I thought it was

always going to be like this!"

The outlook for the very near term is for sunspots and solar flux to decline very gradually from current values until March 26-29, then rise back to current activity around April 6-11. Geomagnetic conditions should be slightly unsettled for March 18-19, but otherwise quiet after that.

Jon Jones, N0JK sent an email about a major trans-equatorial opening on March 9-10 from the United States to South America on 6-meters. He wrote, "Here in Kansas had ZP6CW in for almost 2 hours (0030-0230z). I worked Doug, ZP6CW for a new one! Doug reported over 50 USA QSOs on 6-meters and was spotted from W1, W3, W4, W5 to W7 (Arizona, Utah), W8, W9 and W0. CE (XQ3SIX), CX, LU and PY also worked many in the states."

Jon continues, "6-meter Es single and double hop Es for over 12 hours. An amazing opening, both for the long duration Es in March and the TEP links to South America this far along in cycle 23's decline."

Marvin Bloomquist, N5AW sent in similar comments concerning the same 6-meter opening. In addition to ZP6CW (Paraguay), he noted XQ3SIX (Talagante, Chile) working many W stations, as far north as W9 and out west to W6/W7.

With quiet geomagnetic conditions at mid-latitudes, there were still periods when geomagnetic activity was strong in the Arctic. The College K index reading from Fairbanks Alaska reached 6 on March 14 and again on March 17. Look at the awesome aurora photos at http://spaceweather.com/aurora/gallery_01mar05.htm.

If you would like to comment or have a tip, email the author at, k7ra@arrl.net.

For more information concerning radio propagation and an explanation of the numbers used in this bulletin see the ARRL Technical Information Service propagation page at, http://www.arrl.org/tis/info/propagation.html.

Sunspot numbers for March 10 through 16 were 70, 59, 67, 77, 49, 58 and 45 with a mean of 60.7. 10.7 cm flux was 101.6, 104.9, 110.1, 113.8, 111.5, 108.2 and 104.6, with a mean of 107.8. Estimated planetary A indices were 13, 6, 4, 6, 21, 4 and 6 with a mean of 8.6. Estimated mid-latitude A indices were 10, 3, 2, 4, 12, 3 and 4, with a mean of 5.4.

3198. Djibouti Returns ! ?

Newsgroup: rec.radio.shortwave
Date: 2005-03-18 22:25:00 UTC
From: dxAce <flashoveride@eclipsed.com>
Message-ID: <423B553C.DD4F72DE@eclipsed.com>
Source record: 12686

DJIBOUTI 4780 Thanks to a tip of
Thorsten Hallmann in Austrian news
group
A-DX of 1736 UT, RTD Djibouti is back
on 4780 kHz TB tonight. Scheduled
0300-2000 [Fris- 2200 only, acc to
WRTH 2005, but RTD left the air at
2000
UT today - even now we have Friday
tonight !]

Signal is m u c h disturbed in
southern Germany by an UNKNOWN UTE
signal
nearby, so no reliable MP3 recording
could be made yet. Monitored around
1800-2000 UT.

Bad reception released on both, Kenwood and Sony rxs, even in SYNC
mode.

AOR 7030 set used in SYNC lowerband flank mode at around 4779.6 kHz
and set
Pass Band Shift to plus 2.1 kHz, in order to listen in an agreeable
sound.

50 kW tropical band tx and a MW tx on 1116 kHz is a gift of US
propaganda
organization BBG-IBB to Djibouti in return:

"was supposed to have been built by IBB as part of the deal to
establish the
1431 Radio Sawa station [US 600 kW super power propaganda station to
SDN,
ETH, ERI, audience wb.]" - see Chris Greenway's mail below.

Existing tropical band antenna has been refurbished already.
Envisaged final
opening date was May 2004, but postphoned to March 2005 lately.

Yes, those older Yaesu's can be a lot of fun. I looked long and hard at a used 7700 before deciding on a Kenwood R5000 (new) about 14 years ago. I owned the Sears version of the FRG-7 for about a year and enjoyed it a lot. Not as fast as a digital receiver to tune around in, but enjoyable and a good performer nontheless.

My favorite of the so-called massproduced pre-digital receivers is the Kenwood R-300. Looked like it should have tubes, but it didn't. The xtal marker took some getting used to and it drifted some, but it was a challenge worth overcoming.

That's a fine collection Mike. I especially like those Sony's.
Noticed you have both of the Kenwood bandspread receivers - the earlier
one is harder to find. I enjoyed using the R300 for a year.

How good is this radio? Wouldn't mind getting a backup set
and I wonder if this is any improvement over the FR200 - both for SW
and AM. Reason I ask is that I had an FR200 open and I noticed that
the ferite antenna was only about 2 1/4" long (on a Superadio it's
about 8" long)! Always though it was longer, as AM reception is ok at
night.

You seem to be in Southern California. (66.133.198.125 = Southern Cal. Roadrunner network, but with Earthlink ISP connection to keep the anti-trust johnnies away from Time Warner)

When I was in Northern California, 9740 Singapore always came in pretty well in the Pacific Time mornings even if you were only using a cheapie portable with a built-in rod.

Hi

Hey I have a mint cond. Sears version FRG-7. Paid $200 for it. It's over 25 years old but has hardly been used. I bought off this Chinese guy on Ebay. He was great and packed it well. He told me before I bought it that he could sell it as new if he had the box. He was right.

One thing about the FRG-7 is you can cover the whole band rather quickly. Yeah I almost bought the Kenwood 300 but the ones I looked at were not in good condition. That radio looks very cool though. Now if you can find one of those in perfect shape it would really be a find.

Lucky

I wouldn't sell it! To me, the money I got for it would not give me the same enjoyment I get from the radio. There are just those times when you're in the mood for using one of these older rigs. But, if you look good on Ebay every day, you can find one pretty cheap in good cond.

how can it be collectable if you can get one pretty cheap ? just because something can be collected does not make it a "collectors item".

If I collect cigar butts does that make them collectors items ? they are just things I collect.

If you are confusing the word nostalgia with collectable then I don't think a 20 year old radio is old enough to be nostalgia. what would you call a radio from the 50's ????? ancient ???? when do you start calling the ICF-2010 a collector item ?

I think a radio from the 70's that could truely be called a collectable is the Barlow Wadley XCR-30, it was not a mass produced Japanese radio. only about 20,000 XCR-30's made !!!

lets use a Drake collector as an example, he would say that a 1A is truly a collectible, the MSR-1 is truly a collectible. the SW-4 is very collectible. but even though he might have an R8 in his collection, I sure hope he won't call it collectible !!!

all I am asking is to give respect where it is due and do not insult true collectible radios by calling mass produced radios "collectible"

to put a Regency TR-1 in the same category as an FRG-XXXX receiver is an insult to the TR-1

Pretty cheap means compared to other things you spend money on in life and
compared to higher costing new radios.
Most of them are in bad shape, and are over 25 years old. And if you can't
find that many good ones, they become collectors items in my eyes if you get
one in good condition. Simple as that.

I think 25 years is old. That's my opinion and I think it's a proper one!

Ok instead of buying a FRG-7700 now, I'll wait till you can't find one
anymore and they go for $1200. Thanks for the advice on collectables.

Lucky

For once, I think you make a good point. And, you dont have "Tard" in your
post. Bravo !!! BRAVO !!! BRAVISSIMO !!!!

A total POS radio can be a "collectable" due to its defects. So can any
"first" radio.

My keypad does a great job of accessing memories. Just enter the one or two digit number and the number sign. 1#, 01#, 45# etc. I've never had a problem with it.

Dave

Now Dan, no doubt someone done you wrong, but....
Asking for additional funds for PayPal is against THEIR terms of
service, and of course they are owned by Ebay, so you just set
yourself up for someone to get you kicked out of PayPal.
I just wonder if there was something in your listing that was
offensive to them - did you say "cellular blocked"?. They may key on
the word "cellular" in any radio auction.

We are all constantly trying to root out the source of
"noisemakers" when listening. The most obvious ones, like fluorescent
lights, etc. are well-known. Well, you can buy in any hardware store or
home center a device that screws directly into the socket base of any
metal-bodied lamp, thereby turning it into a "touch" lamp. Very
convienient. But I discovered today that they are a nasty noisemaker in
AM or SW listening.
In this particular case, the lamp was about 14' from the antenna (in the
room I noticed it), and I don't know over what range that effect would
be noted, but probably anywhere in the house. As the subject line says,
probably old news to most readers here, but may be helpful to newer
listeners still trying to track down noise sources.

Rheostats are also notorious noisemakers, and the principal behind
the two devices is basically the same. For what it may be worth to newbies.

Tony

Bruce...thanks for the "heads up", I didn't realize it was against their rules, but once again, I;ve seen it done numerous times. I guess it's just Dan Conti who can't do it!

Looks like this one was jinxed and I just aint gonna sell it Bruce.

If I put it on eBay for a BUY IT NOW price of $150.00, do you think anyone would drop a dime on me to get it cancelled?

DO you think anyone would comment here on how cheapt it was?

I doubt it.

> I just wonder if there was something in your listing that was
> offensive to them - did you say "cellular blocked"?. They may key on
> the word "cellular" in any radio auction.

Nope. Nothing. The bid on it the last time I looked before it was squashed was $510.00. More then what I listed the Buy It Now at. Yes, a high price, but I cannot control that, and I am sure anyone else here would look to get that price as well.

Read through previous posts and you will see the original FA on it and then some interesting comments. You make your own judgement.

Someone was kind enough to inform me that asking for the PAYPAL fee was against their rules, so I retract that potyion of the post.

I will accept PAYPAL with no additional cost involved.

The total for the scanner is $475.00 shipped.

E-mail if interested.

Dan

Odd, this frequency is distorted on AM. Distorted but easily understood.

So I tried LSB, sounds about the same. I tried USB, no signal.

Whis is this sufficiently audible on AM and LSB, but not USB?

running dogg <run@ning.dog> wrote in news:423a4def$1_1@127.0.0.1:

Wolowitz and The Project for the New American Century.

Of PNAC: http://www.newamericancentury.org/

"American foreign and defense policy is adrift......"

"We aim to change this. We aim to make the case and rally support for American global leadership." (so, unfortunately, did Germany wish to rally support for German Global Leadership, i.e. WWII)

"Our aim is to remind Americans of these lessons and to draw their consequences for today. Here are four consequences:

We need to increase defense spending significantly if we are to carry out our global responsibilities today and modernize our armed forces for the future; (who is going to pay for the increased spending, what Global responsibilities?)

We need to strengthen our ties to democratic allies and to challenge regimes hostile to our interests and values;
(note that the word terrorism doesn't appear. "Regimes hostile" as well as "our interests and values", can be broadly interpreted, and the possibility of abuse is too great with no specific boundaries established, i.e. a country can engage in economic hostilities towards the U.S., mainly for the betterment of their own people, yet their actions may be construed as "Hostile" to the U.S.)

We need to promote the cause of political and economic freedom abroad; (I suspect that this is the token offering of normality. Make this seemingly reasonable statement to diminish the asininity of the other statements.)

We need to accept responsibility for America's unique role in preserving and extending an international order friendly to our security, our prosperity, and our principles."
(note that this sentence essentially means, as stated earlier in the "American Global Leadership" sentence, that the U.S. is the baseline for the world, and everything else are merely things that happen to benefit the U.S. Problem is when other countries also have a Christmas list such as this, there will be head butting).

Al,

Could you kindly explain to those of us who are slightly clueless,
just what the hell this has to do with shortwave?

Point is, no one beside yourself possibly, really gives a hoot about
this in this forum. Once in awhile you post loggings, which is cool,

however, I am beginning to suspect that your primary goal here is to disrupt the group through irrelevant and/or religious postings.

Try DX'ing once in awhile! I wish I had 1/10th of the spare time you seem to have, and could spend it on DX'ing. Religion is a private thing and should be kept so, the unfortunate glut of shortwave religious broadcasters notwithstanding, and unrelated topics should be posted in the appropriate newsgroups. At least that's the "Netiquette" I've been practicing for the last 15 years (and before that when the Internet was ARPANET and for defense personnel only).

Good grief! Enough already.

Done venting now!

Al

Yup! 'Tis back! Heard with screaming signals at 1800 UTC here in the
Marianas. The IBB stuff is correct as well and we will be putting in
some hi-power "stuff" there shortly, according to what I've been
hearing. I have one of their old QSLs from the late 80's, but will
try for another.

34, -118 is a major clue to my spot on the spheroid.

9740 is the only reliable HF BBC service available here. We also get V. of Russia, R. Japan, RNZI (when their transmitter ain't broken), The Chinese and the Koreans. That's about it for program listening quality service. Oh yeah, the Voice of the Andes...

I use my various Drakes and Icoms and Lowes more often than not to listen to the Coast Guard and the AMC and listen to International Broadcasters on WRN via Sirius.

My cheapest portable is a Sangean with a slide-rule dial. But I just keep it for a standby standby. I do occasionally drag the ATS-606A on hikes, but I wouldn't call that a cheapie.

> newbies.

I have not found the old style ballast with florescent lights to be
noise makers unless they are right up near the radio. The ballast type
can be a noise generator if the starter or bulb needs to be replaced.
The newer high frequency switching type can be a noise problem even if
the bulb is OK.

The touch lamps employ the same semiconductor technology as light
dimmers, which is either a SCR or triac type of switching device. These
components switch the AC power to the bulb. In order for them to work
efficiently they have to switch fast or they will dissipate more heat
in the small space they must occupy. This fast switching is a direct
cause of broadband radio noise. Other passive components in the devices
are used to suppress the fast switching transients but don't eliminate
them. It would be expensive and require more space than a light switch
box in the wall to suppress the generated radio noise to the point that
you could not hear it on a sensitive SW radio.

If used to switch a light on or off a semiconductor is no different
than a mechanical switch or relay. The act of turning the light on or
off will generate one pulse to be heard on the radio. The problem with
dimmers is the range between off and on where the device is switching
on and off every 60 Hz AC cycle. The act of dimming causes this every
cycle switching. You can test this yourself by tuning your radio to a
low unused frequency. With the switch off or full on you will not hear
much noise but have it anywhere in between you sure will. You will be

able to change the character of the noise by controlling the brightness of the light. The light brightness is determined by the amount of time during a cycle the device is on.

3237. A Coax experiment

Newsgroup: rec.radio.shortwave
Date: 2005-03-19 01:47:30 UTC
From: r2000swler@hotmail.com
Message-ID: <1111196850.100557.100250@f14g2000cwb.googlegroups.com>
Source record: 12774

A friend was contracted to do some wiring in a local hospital.
They were to order Belcon 1506A as part would run through an
air vent system. Some fool in purchasing decided to go with 1505A.
Same cable except it ain't plenium rated. The supplier wouldn't
take it back, and they had no storage space so he was given, as in
legal transferr with documentation.
The fool in purchasing lost his job.
Must be hard to be on the street when you are 58.

My friend had about as much use for this cable as I do a poke in the
eye. So he gave it to me. This is GOOD, very good cable loss at 1500MHz

is only 9.3dB/100'. Last weekend we helped a mutual handicaped friend
put up a better scanner and SW antenna. We used a laptop,my PRC1000 and
compared the 1506A with standard and low loss 50 Ohm coaxes. Pretty
day,
good fun. While we climbed like monkeys he fixed on hell of a supper.
First cookout of the new year and the food was GREAT!

With an NIB older radioshack diskcone, the one without the vertical
stinger, and a pasternack PL-259 to "F" female adaptor we tried some
tests. The 1505A was better, lower loss and greater noise rejection,
then any other cable we tried. Just for grins I used 50' of 50 Ohm
Heliax and while it was slightly better, heliax is are and expensive.
We also tried some of Beldons normal CATV coax and it was at least
as good as the 50 ohm and was a lot cheaper. His coax run is 50' from
the antenna to the ground (AKA "static" block. With a ~10 run to his
radio desk. He lives about 20 miles from Lexington KY, so we used
distant
(>50 miles)NOAA stations and the UKPD/LFFFUCG fire trunking system.
This isn't a state of the art installation. My friend isn't interested
in trying to receive weak distant signals. HE just wants to keep up
with
his old comrades. We could listen to PD/FR and aero comms from a 50
mile
radius. He is tickled pink. Perhaps his ineterest will grow. And
perhaps not.

The foil and copper braid offer much better shielding, going from 96%
for braid, to to 100% for braid foil. This helps keep noise from your
computers from entering the signal path after the coax is in your radio

room. I have an older Contura 40MHz? laptop that the LCD screen is
NASTY.
I mainly use it for my DeLorme GPS but it will control my PRC1000 very
nicely. We learned that routing of coax can be more important then most

radio users think. By passing the recieve coax across the front of the LCD screen , standard braid only coax started letting RF noise into the receiver.
I used a "bunch"(10 on each side) of ferrite beads to keep the RF from traveling up the braid's outer surface. Without the beads, even with the
coax well away from the PC, we got a few slight birdies. This even happened with the heliax.

For SW CATV worked as well as any other cable I have ever tried. Our friend
is on a limited income, long term disability insurance, and it was nice to be
able to do a first class install without breaking his piggy bank. While 1505A is clearly overkill it works very nice. This left more money for his radios.
I have loaned him my PCR1000 untill his radios arrive. And it was nice to use
a TV A/B switch to allow him to change from the diskcone to the 100' longwire. And yea the 100' longwire overloads the PCR1000 on HF, but a simple el-cheapo radioshack varaible attenuator, with F in and out takes care of that. And yes
a 100' wire beats a diskcone for HF reception. Period!

I think the average SWL and scanner user is missing a bet by not investigating
CATV coax and "F" fittings. There are good weather proof male "F" fittings
that are much easier, and cheaper!, to make good connections with then BNC.
Good CATV coax is much less expensive then similar 50 Ohm stuff because they
make so much more of the CATV cable. Ground blocks are inexpensive and will
allow one to easily meet the NEC requirement to ground the outer conductor on
coax. And this stuff is made to stand up to bad weatehr. Cable TV companies and
Direct TV want their installs to be as trouble free as they can make them.
If you talk with your local cable installer you can often get odd lengths of
CATV for the taking. I admit usng the 1505A was overkill , but why not, we ahd it.
Terry

> minutes of manual knob twiddling.
>
> I know which method *I* prefer. YMMV.

Just to make sure that I wasn't hearing things, I tried
it myself just now. I can get Marocaine in for about
a half a minute before the BBC bleeds in and starts
to overwhelm the sync. There are patches of time
when it is audible over the junk, but then the BBC
simply overwhelms it again. Considering that the
BBC is at s9+20, and Marocaine is somewhere
between S5-S7 (I notice the s-meter bumping up
to S9, but it's in time with the BBC bleedover, not
Marocaine itself), it's not a big surprise.

Can I read it well enough to ID it?? Probably so
if I constantly tinker with the sync, fiddle with trying
ECSS and the attenuator, and lower the filter to 2.3.

If I want to listen to it for more than a minute or so, however, I'd want a bit more than what the sync alone can give me. Passband offset would be nice, as would a good notch and much better front end selectivity.

Is my Sat 800 defective?? No. It's always done this (it was one of the first Sat 800's out there), and I've just acknowledged that that's part of the difference between a $500 radio and a kilobuck radio. Last fall, I sent my Sat 800 to Drake for a general tuneup, and with the exception of a couple of caps replaced, it was fine. Got the Sat 800 back, and it still does the same thing. That tells me that what I'm asking it to do is something that it simply has a hard time doing.

3240. UHF/VHF listings?

Newsgroup: rec.radio.shortwave
Date: 2005-03-19 02:01:40 UTC
From: BGP <egopower@yahoo.com>
Message-ID: <1111196998.191553.151490@f14g2000cwb.googlegroups.com>
Source record: 12778

Hi guys. I'm not sure this is the right place for this question, but some of the other newsgroups seem quite dead and I'm sure someone in the shortwave crowd has the answers.

I'm looking for a listing of UHF/VHF TV channels.

Specifically, I live in Cleveland and would like to pick up CBC on my antenna. I'm not sure which channel it is. There are several stations that come in fuzzy so its hard to tell. I know NBC is 3, ABC, is 5, FOX is 8, etc. If I remember correctly from my childhood its channel 10 but I'm not sure (that station says PAX now but the audio doesn't match the picture oddly enough).

Perhaps someone has a better idea (or perhaps CBC is on multiple channels that could be received).

Looking to pick up the new "Doctor Who" series being broadcast on tuesday April 5th at 8PM.

Thanks in advance.

< Snip >

Pretty harsh for the purchasing guy to get fired over something like
that.

I'm surprised that something could not have been worked out with
the vendor or that the cable could not have been used on another job. If
one of my vendors treated me like that, that would be their last order
period and they would get that from me in very clear terms if you catch
my drift. With vendors like that who needs enemies on the job.

You can not create bad relationships on the job in electronics like that
vendor did because you will be burning your bridges. The world of the
electronics industry is actually a fairly small place.

for those wondering, my signal path is:

1)grove TUN-4, two antennas in and two outputs
2) one out goes to a KIWA shortwave preamp with BCB filter
3) KIWA output goes to an ICE 112-4 four way splitter amplifier

this way I can have 5 receivers at the same time

I'm about 500 miles north of you up Interstate 5 (allowing for wherever you may be in SoCal) and I can regularly get the BBC evenings on 5975. However, after March 27 this may change as Antigua is shutting down. I can also get // 9525 about half the time. Since you're in the broadcasting industry, you may work evenings which would explain why you don't know about BBC in the evenings.

> I use my various Drakes and Icoms and Lowes more often than not to

Considering that you're probably not in the best spot to receive international broadcasters, you probably get more reliable reception of the BBC on Sirius. :) Me, I don't want to spend that type of money for one station unless BBC forces me to by shutting down their SWBC operations.

Well, the FCC listing won't do you much good since it only covers the USA. Try searching around the CBC or Canadian government websites (I'm not sure what the broadcasting regulatory body is in Canada; you'll want to look there) to find a database similar to the FCC's. Low power TV stations (LPTV) are popping up all over the US nowadays, and they can be a serious nuisance if you're a TV DXer. For example, I used to be able to get KSBW channel 8 out of Salinas here in Sacramento-until a LPTV station playing the Home Shopping Network popped up on the "unused" channel. Pax is a minor network that frequently runs on LPTV; it's supposed to be "family friendly" and runs reruns of shows like America's Funniest Home Videos. If the channel you wish to get is on 10 and Pax is in the way, you'll need some pretty fancy antenna work to null it.

Supermarket chains in the US only cover relatively small areas; maybe a state or two out west and a multistate metro region back east. Winn Dixie's outlets are all in the American Deep South (Al is in North Carolina) therefore his postings are utterly irrelevant in the rest of the US not to mention the world.

Dan

I didnt see the auction but if you did put in words about a fee
for using pay pal I can "guarantee" you that is what did you in. Its too
bad they waited till almost the close of the auction to catch it. Ive had
that very thing happen to me 2 times, and when they finally got around
to emailing me as to why, that was their reason. As to whether someone
reported it is another story. 1 of my auctions they shut down was close
to the end too. Try not and get too paranoid until you get your email
from ebay.

Jeff

Most SWL's would not give the Sears version a second look if they
didn't know it was a rebadged FRG-7. Funny how the name can mean so
much. Yeah, they are fun. Mine had an upgraded filter instaled by
the guy before me. Finding a decent R300 is indeed difficult. Usually
the bandswitch is heading south and reception suffers on selected
bands.

The radio that is getting the most time right now is a Degen DE1103.
What a radio for $65.00

How can it be collectable if you got it cheap...easy. It is collectable because at least one person collects it (or them). Remember Beanie Babies...most of 'em sold for a buck, and many were giveaways at McDonalds, but there were a whole bunch of people who thought they were collectable until the market flooded and the prices tanked. Age has nothing to do with collectability. Don't confuse rarity with collectability...two totally different concepts.

In English I presume? There are lots of
good Spanish programming directed to the
Americas.
Deutsche Welle is good. R. Taiwan Int. uses
Florida relay and does well in 5 languages easily
heard but very different programming.

You should be able to get the Phillipines and
evangelicals quite easily in English.

Grayline DXing might bring in others.

@l41g2000cwc.googlegroups.com:

Copied in Southwestern PA, 0332 UTC, 4028 KHz USB Icom R-75, indoor wire
antenna around room.

Very weak, mostly inaudible. There is indeed a noise as if an electric
motor at high speed was running in the background. (a big motor) The noise
is centered on 4028 KKz, disappearing within 2 KHz above and below the
signal.

Well, he certainly spread his DNA around, 13 legitimate kids, another 4 illegit that I personally saw, who knows how many older illegit ones are running around. When he was 57, his kids ranged from 41 years old down to about 1 year. They all looked, all of them, sad to say the girls too, like clones of him. His looks worked ok as a guy, but even he said he was sad that "My girls have to go through life looking like me!"

After 45 years together, his wife had enough, and divorced him. Didn't seem to bother him much..

Okay, the next obvious question is whether you
notice much of an issue with the antenna splitter
and the preamp in terms of introducing noise
and reception. I've been thinking that when
I (eventually) get my home office "built" (as
opposed to now, where the basement is unheated
and uninsulated), it would be nice to run multiple
radios off of multiple antennas.

STATE JUDGE HOLDS HIMSELF ABOVE
UNITED STATES CONGRESS!
RULES FEEDING TUBE CAN BE REMOVED FROM BRAIN DAMAGED TERRI SCHIAVO
DESPITE SUBPOENA FROM UNITED STATES CONGRESS ORDERING HER APPEARANCE IN
U.S. CAPITOL
Florida Judge says he "knows of no cogent reason" for Congress to
involve itself."
It's not for him to know. It is for him to obey. This guy is a little
too impressed with himself. He needs to be knocked down a few pegs. It
is a federal crime to do anything to impede, harm or disuade a person
from appearing before Congress. Cutting off Terri Shiavo's food and
water is a direct affront to the sovereign authority of Congress.
If he can scoff at Congress and get away with it, so can I. I will
wait to see if the judge experiences any consequences for his acts in
defiance of congress. If he goes unpunished, then I will proceed from
that point with the idea that I can ignore Congress too.

EYE WITNESS: TERRI SCHIAVO CRIED WHEN TOLD THEY WERE TAKING THE FEEDING
TUBE OUT AND YELLED "I WANT TO LIVE"
Folks, it is beginning to appear that it may be necessary for a group
of heavily armed men to over-rule the court by forcibly removing Terri
Schiavo from that hospice and from the State of Florida in order to
save her life. I advocate that course of action as a last resort.

Hi Frank,
Mine seemed ok, too. I've got about a 1999 FRG-100B. About
that R-72.....maybe the intentionally designed the radio that way, so
it could keep your house warm on those cool desert nights! Just kidding!!!!

Jeff,

The PAY{AL fee stuff was not in the auction. I put that in the
Newsgroup post and someone called me on it, I acknowledged the mistake,
and posted a retraction right away.

Jeez, it really seems like my posts, actions, and I are being held to a
higher standard then MOST others just because I was trying to sell a
DEAD scanner.

Dan

FITZ MAG,
.
1. Place your Sangean PT-80 Radio next to a Window and extend
the Radio's Whip Antenna and Tune WWV at : 5 MHz, 10 MHz, 15 MHz,
and 20 MHz. Listen to the each frequencies Time Signal for a
Minute or two. Depending on the time of day or night you should
be able to receive one or more of these frequencies. If you are
receiving any or all of these broadcasts then your Shortwave Radio
is working.
.
2. Here is a Link to a webpage that offers a Click-On [Button]
that will give you the Hourly List of English Language Shortwave
Broadcasts. "Comprehensive Listings of Worldwide Shortwave
Broadcasts in English and Other Languages"
http://www.anarc.org/naswa/swlguide/
Go to the bottom of the webpage and CLICK-ON the
[List Programs on at Current Hour on Current Day] Button.
When every you have time to Listen to the your Shortwave Radio
and What-an-Idea of WHAT's OUT THERE To-Be-Heard at that Time
. . . Simply "Click-On-the-Button !"
.
.
.
ABOUT - The Sangean PT-80 ProTravel AM/FM Shortwave Radio
GoTo=> http://www.rffun.com/catalog/portable/1080.html
IMAGE=> http://www.rffun.com/catalog/portable/1080lrg.jpg

TABLE=> http://www.universal-radio.com/catalog/portable/1080code.html
.
The Sangean PT-80 ProTravel is a compact digital radio featuring
longwave, AM, FM plus continuous shortwave coverage. The PT-80
employs a dual conversion PLL synthesized circuit yielding excellent
sensitivity and image rejection. It offers five tuning methods :
direct frequency entry, autoscan, manualtuning, memory recall and
rotary knob tuning. 45 memory presets are available with ATS Auto
Tune System. Single sideband (SSB) shortwave reception is supported.
A dual world time clock (12/24 hour) with alarm, snooze and sleep is
featured. The LCD is backlit and there is an external antenna jack
for the shortwave band.

.
NOTE - That the Grundig Yacht Boy 80 that is sold in Europe is a
re-badged Sangean PT-80 ProTravel Radio.
GYB80 => http://www.grundig.com/produkte/audio/welt.html
Chrome coloured world receiver with AM Double Super Technology.
Shortwave Coverage from 1.70 to 29.90 MHz. Frequences and SW bands
can be keyed in directly. Single Side Band (SSB) Reception.
PLL frequency synthesizer with 45 Station Memory.
.
.
hope this helps ~ RHF

BGP wrote:
> I'm looking for a listing of UHF/VHF TV channels.

You might try my website, URL in the signature...

CBC used to be channel 10 but not anymore, that station (CFPL-TV) disaffiliated from the CBC a few years back. A good thing as channel 10 would be a lost cause today. (CBS's digital signal is on 10 and would clobber the Canadian station) I don't know why you're seeing Pax, my guess is you're seeing a leak out of the cable TV system. Pax's over-the-air channel in Cleveland is 23.

CBC channel 10 was out of London, Ontario. The new CBC channel in London is 40. You might also try channel 56 (Kitchener, Ont.). A few other CBC channels that might work but are somewhat further afield are 9, 20, 42, 44, and 45.

They don't receive so well in moderate signal areas. Today the push would be the fee-for-monthly sat radios. The various corporations involved would rather shovel top40 and recycled news.

Going back to a topic in an older thread, I mentioned ethernet related QRM. I noticed shielded cat6 at a local store (Fry's electronics). I can't see to find any specs on the net regarding the quality of the shielding. I checked the Belden website for shielded cat6, and can't locate any, so I wonder if the shielding is more hype than science.

http://www.outpost.com/product/3701496?site=sr:SEARCH:MAIN_RSLT_PG

I get too many useless hits with google on sheilded category 6 cable, i.e. I can't find any specs on the cable itself

Hold me I'm scared...

Lloyd, why don't you lead a faction yourself? If you agree with Hal that
armed revolt is necessary, then you should lead by example. Of course I
expect you to just stay there sitting on your behind whining about it, just
like most militia nuts.

Yeah - just like when Linda Thompson was gonna take the Unorganized Militia to Washington and take over and hang all the congressmen for treason. What was this .. 1995 or so.

3280. Why is BBC World Service reducing its short wave provision?

Newsgroup: rec.radio.shortwave
Date: 2005-03-19 06:47:27 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <d1ghtvjoq1@titan.btinternet.com>
Source record: 12813

"Short wave listening around the world is declining.

The downward trend is accelerating: the global short wave audience for BBC World Service has dropped from 122 million in 1996 to 97 million in 2003.

Like other international broadcasters, BBC World Service has been adjusting its short wave provisions in line with global demand changes.

Alternative ways to listen

At the same time BBC World Service has been investing in new delivery methods, all with the improved audibility now preferred by audiences, such as FM, cable, satellite and online.

BBC World Service is committed to making the best use of the money it receives from the government and has had considerable success in attracting audiences to these new methods of delivery; more than 50 million are using these and the numbers are growing fast.

Separately, online usage has grown from three million page impressions every month in late 1998 to almost 300 million by 2004, which is equivalent to 18 million unique users.

Alongside in-depth news and information, programmes are available streamed both live and on demand at the convenience of the listener.

There are now more ways to listen to BBC World Service broadcasts than ever before. To check for availability in your region please click here."

You still haven't explained how the tubes fiqure into this...
Of course it's a good receiver. It was pretty much a lab
instrument. But it's the overall attention to detail, rather
than the use of tubes that makes it good. If the one
picking up the het couldn't get the audio, it's due to
poor filter shaping in that radio..
The sensitivity pretty much means nada for him in Fla.
You'd have to be on a frozen desert Isle to have quiet
enough cdx to take advantage of that sensitivity on MW.
Severe overkill for 99%...I'm sorta dubious of how those
numbers were measured also, but thats another story...
Doesn't really matter as even 1 uv for 10 db s/n+n is overkill
in the MW band..
I don't dispute that it's a good radio. It's one of the best.
But the same could be done solid state, if they still built
radios like collins did 50 years ago...
The sensistivity on my icom on MW-AM is way less than those
numbers, and I still have way more sensitivity than I could
ever use, unless I was waaaaayyyy out in the sticks , in the
dead of winter...And even then, I probably have enough..
In his case in Fla, just having a R-390 alone is not the answer.
His location is not quiet enough to take advantage of any
great sensitivity numbers.
The only thing he needs is good selectivity. Any half decent
radio, tube or s/s, will have enough sensitivity if any kind of
decent antenna is used. The station will either be there, or
it won't, due to cdx. If it isn't, nothing he uses will likely help too
much.
On HF, the 706g does .15 uv for 10db.. .12 on six meters.
.11 on vhf/uhf.. Thats overkill for HF and six...I never use
the preamp...It's *too* much sensitivity, so I actually use less
than those numbers ..Those are with the preamp on.
It's reduced on AM mode, how much depending on the band,
but it's still never lacking for sensitivity. Not even close.
And it's a fairly cheap radio, relatively speaking. Much less
than the R-390 when it was new...About 1/20th the size and
weight...:/
BTW, I do have both tube and solid state radios, so it's not
like I've never used a tube rig before to compare...
Receiving wise, there is nothing done with tubes, that can't be
done with solid state. Now audio....That's open to real debate..
I don't deny many tube radios have great audio to the ears.
But so does my 706 if I'm going into the sound card, and to
my kenwood stereo audio amp, good speakers, etc...

It's my best sounding radio for listening to the "rack" crowd,
that run all the transmit audio gear. Way better than my old
all tube Drake R4, which sounds thin in comparison, due
to it's filtering. Not much low end on that radio...

CBC News Viewpoint
March 16, 2005
Greg Hughes

Since the term MP3 became part of everyday parlance, many people in the business of broadcasting have been wondering what effect downloading would have on radio, let alone the music industry. For decades, radio has been the technology of choice for musicians, record labels and listeners to consume music, news and information.

The internet's rapid ascent was, at one time, a source of dread for radio. Who among us would rather listen to radio stations that programmed music play-lists for you than to on-demand MP3s?

But those fears have proven to be wrong-headed. Today, the internet has done more to fuel a creative renaissance for radio than any other major technological advance in the past 40 years.

But it's not quite the change people expected.

Radio in the 21st century will no longer be just the AM/FM model. It will be a mix of analog, digital, satellite, podcasting and even shortwave. It will be a decidedly democratic medium. It will blow away the conventions we've become accustomed to with analog.

And most of all, it will be the kind of listening experience that will break down barriers between genres, ideas and people in ways never seen before.

To understand what this all means, take a look at this very network, the CBC. CBC Radio One and Radio Two - two analog, mostly FM-based networks - remain mainstays of our daily lives.

Chances are you listen to them mostly via analog, whether through a car stereo or office radio tuner. But you're also likely to tune in to radio broadcasts via digital radio, which broadcasts a crystal-clear digital signal as opposed to the unpredictable nature of analog broadcasts.

More and more Canadian radio stations are switching to a dual mode signal, given digital's expected dominance of land-based broadcasts by the end of the next decade.

But in the age of the internet, you're also increasingly likely to listen to, say, Radio One through webcasts. You can even download files of past CBC programs archived on various show websites.

Entire CBC networks - specifically, the youth-oriented CBC Radio Three - are internet-based networks for on-demand listening. Listening to the CBC through the web is as common an experience nowadays as turning a dial tuner

on your home stereo.

And this is where things get interesting for the future of radio. The digital age is slowly turning radio into a more free-flowing, non-linear experience.

But online radio is only one digital format. What's got many broadcasters in North America truly excited is a kind of technology that will almost assure the end of radio as we know it - satellite radio.

Already huge in the U.S., satellite radio involves the beaming of radio signals into orbit and then back to radio receivers. Combined with CD-quality sound and an almost-total absence of regulation from broadcast watchdogs like the Federal Communications Commission (FCC), the multichannel, commercial-free broadcasts that provide everything from Beatles-only stations to Gregorian chants 24-7 are growing at a phenomenal rate.

American providers, such as Sirius Satellite Radio and XM Radio, may have given radio the biggest boost since the dawn of the FM format.

It's easy to understand why; aside from the clarity of sound wherever you go (new cars built in the U.S. are increasingly being equipped with satellite technology) and no cracking or signal strength problems, broadcasters can say and do almost anything they want on satellite radio.

Wired magazine reported in their March edition that Howard Stern, fed up with the meddling of broadcast conglomerate Clear Channel and routine complaints of indecency by the FCC, is jumping to Sirius for a five-year contract. Rapper Eminem, as well as Playboy and other media are also going satellite.

Here in Canada, the CRTC is beginning hearings on the establishment of Canadian satellite stations. Two main partnership plans are now facing the regulator to set up shop: Sirius Radio Canada, a partnership involving the CBC, Standard Radio Inc. and Sirius Satellite Radio in the U.S., and Canadian Satellite Radio in partnership with XM Satellite Radio Holdings Inc.

Yet satellite's just the tip of the iceberg. With the MP3 player now an absolutely essential device, it's only natural that radio employs the red-hot medium to its advantage.

Take podcasting, a new kind of radio that combines the do-it-yourself spirit from movies like Pump Up The Volume with the advanced technology of MP3s. Borrowed from the iPod moniker, podcasting involves the use of a microphone connected to a computer that allows a user to record their voice as an audio file.

From there, a podcaster can save his "broadcast" as an MP3 file and post it on a website, blog or file-sharing service for people to download.

The potential for podcasting is huge. The technology may allow people to create their own radio for download around the world, as well as making and

producing content for established radio networks like the CBC much easier.

Cheap and easy to distribute, podcasting could become this century's version of pirate radio - whether it be a young person making a show only about bands like The Killers, or political rebels transmitting an MP3 to supporters desperate for information against an oppressive government.

In this age of so many varied tastes and options for the radio fan, even older radio technologies are starting to enjoy a rebirth. Shortwave radio, a global broadcasting format used in various propaganda battles during the Cold War, is starting to see an increase in growth. AM radio, once considered a place where music went to die, remains strong with the near-total dominance of talk radio.

So while some lament for an era of the radio disc jockey as celebrity, it seems the digital age is making radio, as a medium, larger than life once again.

Of course its possible, but technology can also REINFORCE existing power structures as well as undermine them.

People thought MP3 and the Internet would herald the demise of the big record companies and would put the money directly into the pockets of the artitists and push record prices down - and for a while it did, and then "the empire struck back", whereby the big record companies harnessed the new technology to its interest

Nice try Terry, but a caser of back to the drawing board in terms of revolutionary theories but the technology you say will herald some changes - but not a revolution and democraticisation. After all CNN could not allow that!

I put the Djibouti QSL back up at the top of my page:

http://www.iserv.net/~n8kdv/dxpage.htm

QSL'd here back in 1983. Had the pleasure of visiting Djibouti twice back in 1979.

I'd have to disagree! While the AUX-7 does make it easier to tune a few SW
bands, not using one does not amount to 'killing yourself'.

I've used both methods with various R7's.

I have ben using B O G's for over 15 years and have logged tons of new stations. They are easy to put out and reel back up. I recommend people give them a try. Many of mine have been just laid on the ground on or under the snow without a ground rod and work great.

The health sicences people told the fool not to order non-plenium, the supplier warned
him in writting tht this was the wrong cable and my friend tried to convince this clown
several times to do the right thing. The fool was a carry over from the prior CEO.
Made many mistakes over the years and this was the last one.

Too harsh? Not really? As to never dealing with that supplier again,
why would anyone in Lexington KY order stuff from supplier in Mexico?
I doubt if the vendor expected to get any repeat business anyway.

Hi Shawn,

I do 90% of my DXing ay my summer cottage where I would lay loads of
beverages, but it would be best for me to place thwm a few centimeters under
the soil - how do you think that would work?

Thanks

Richard, Warsaw

The WBCQ transmitter on 9330 runs that way. The USB is suppressed. In other words it is the carrier and LSB.

3307. DDS based signal generator

Newsgroup: rec.radio.shortwave
Date: 2005-03-19 14:06:49 UTC
From: Pete KE9OA <p.gianako@worldnet.att.net>
Message-ID: <ZIW_d.417502$w62.328360@bgtnsc05-news.ops.worldnet.att.net>
Source record: 12839

Hi folks,
My job at at my present employer is winding down, so it
might be time to market some of my other products and services.
Would there be interest in.....
1. a DDS based AM signal generator, tuning steps down to 10Hz, coverage
from 10Hz to 30MHz. This could go all the way up to 60MHz.
2. A DDS based VFO that has programmable offset for the displayed
frequency.....good for an LO for your receiver experiments.
3. A DDS based replacement for the Drake FS-4 synthesizer, that has a
projected price of about 130 dollars. Some of you Drake list folks may have
seen this inquiry posted by Dan.
4. Receiver mods, such as attenuator removal, etc. I could do audio mods to
receivers, but since Craig, over at Kiwa is already doing this, I don't want
to encroach into his territory. I have spoken to him in the past, and he is
a good guy, as well as being a straight shooter.
5. Receiver characterizations, such as sensitivity, overload point,
distortion measurements. I have all of the equipment necessary to do these
characterizations. Price for this service would be 30 dollars, plus
shipping.

There are quite a few ideas that I have, but if there is some kind of
service you are looking for, please e-mail me directly and let me know. I
can do some receiver repairs, including the Lowe HF-150, and I can align
just about any receiver, including the old tube boatanchors. I have restored
and aligned: all Hammarlund receivers, most of the Hallicrafters and
National receivers, Collins receivers.
I am also set up to do stereo FM tuner alignments. I can verify stereo
separation up to at least 65dB, and distortion measurements down to 0.0015%.
Before I started designing radios, I used to design and build custom audio
equipment for folks.
Thanks for looking at this post.....once again, it would be good
to contact me directly so that I don't end up starting a long thread, but I
will check this one from time to time.

Pete

One more thing I forgot to mention.....I am also adept at aligning
all Drake receivers, up to the '7 line.
Thanks!

I remember at the Cedar Rapids hamfest a few year back. I strung one of these antennas out and the results were very good. I was able to hear WLW with an S9 +10dB signal. WHAS 840 was coming in with an S9 level. This was at 12 noon.

Yeah, but their amount of shortwave listeners has declined only since
they reduced their broadcasting schedules, as far as I know.

1) When push comes to shove, shortwave frequently goes where the new
methods can't.

For example, the King of Nepal shut off 'net connections and FM local
relays of the Beeb but it is far harder to shut down shortwave.

Also, I have never heard of a shortwave transmitter which could not
take on further listeners because of network overloads.

2) Once you go on the internet, you don't need BBCWS anymore - you
might as well listen to Beeb domestic. For example, I rarely listen to

BBCWS on the internet but I am a frequent listener to the satellite network BBC7 (with old comedy and drama) and Radio 4, each of which is streamed.

You're missing the whole point. I'm not saying the 7700 is a good performer. That has nothing to do with it. Some people collect radios for their hardware and aesthetics.

It's like if you went to a museum and saw older radios. It would be nice if you could try one out and see what SWLs of that time had to work with in the Yaesu line of receivers.

I love being able to go from a 1975 radio or a 2004 radio to those inbetween. Like I said to each his own..

Lucky

Source record: 12914

Well, there are signs that shortwave listening is on the decline if you look at the number of new hf receiver models being offered and the numker of companies making them. The frequencies listed in publications like MT seems to be smaller than before too.

The BBC like so many other national radio stations are looking for ways to cut costs when budgets are lean and still get their message out. Going to the internet, cable tv, satellite radio and local rebroadcast of downlinked signals are obvious ways to do that.

Wish the excitement for shortwave broadcasts was like it was from the 1930's through the 1950's. Back then broadcasts over shortwave were the fastest way to find out what was happening around the world. Many of those furniture grade wood cased radios had both MW and shortwave bands. Today there are numerous alternatives to shortwave radio and the major boradcasters are incresingly turning to those media.

Hi dxAce,

Djibouti made it to the West Coast last night... barely. I wished I had gotten home earlier so I could have tuned in at *0300. What little signal I had was best off the backside of my west Beverage:

DJIBOUTI 4780, 0417-0422, RTD Djibouti Mar 19 Tentative. I didn't learn of this reactivated outlet until past 0400 tonight, but I presume it was Djibouti putting in a weak signal anyway, more than one hour past RTD sunrise. Male announcer in African-sounding language, a brief bit of music, and that was it. Signal quickly dropped into the noise by 0420. Some swisher (CODAR) interference. (Atkins-WA)

>

According to a 2002 Government White Paper, only about 1.5 percent of China 's population is Christian. According to the International Religious Freedom Report 2004, released by the U.S. Department of State, about 4 percent of China's population is Christian, including the members of the registered and unregistered churches.

China's population is approximately 1,300,000,000. You do the math!

It is beleived within certain religious circles that Christians will constitute 20 - 30% of China's population within three decades, which translates to about 45 million Christians. This would give China the largest Christian population in the world in 30 years.

The ultimate source that I've found is
<http://www.fcc.gov/mb/video/tvq.html>

You feed the web form your latitude/longitude (in degrees arcminutes
arcseconds form), and give it a distance and it gives you a list,
with bearing in degrees and distance, to all the TV stations within
that radius. It includes Canada, although some comments in another
newsgroup said that the Canadian data may not be up to date.

Oh gosh, I'm surprised that no one has ever asked this before.

Of course shortwave is doomed. So are newspapers, broadcast AM and FM,
books, television, movie theaters, etc. etc.

In fact, eventually satellite and internet will have to duke it out,
and so at least one of them is doomed too.

How about that?

I am considering getting an R75 for use as a DXpedition rig. If I were to get one, what would be the best way to power it while in the field?

I'm also considering the Palstar R30 for this purpose as well, since it can run on batteries.

Any opinions concerning the R75 vs. the R30?

Any bits of wisdom are greatly welcomed. :)

Yes, shortwave, along with everything else, is doomed, according to Brother
Stair. Haven't you been listening to shortwave radio?

When you say DDS based generators, how do you propose doing the modulation? I understand how you can get a carrier from DDS, but do these chips have digital modulation as well? In the dark ages, I did DDS (very low frequency) using coordics. This was prior to DDSs being on the market.

Personally, I'd like to see someone compete with Wellbrook on their loop antennas. The damn George Bush weak dollar policy really sucks when you buy stuff from the UK. Hell, it sucks just buying gasoline. Even making the amplifier such as the Wellbrook ALA 100 would be a nice product.

That could very well be.....I used to set up at those hamfests with one of my plexiglass receivers. Nice hamfest. I never saw so many honest people in my life. I have a friend from Dubuque; his name is John Richardson. He would always set up a long tent over several tables. He looked like an American Indian with that long ponytail, and he always would have some cool stuff, like those old RCA navy receivers, R390s, R338s, and other super cool stuff. Last time I ran into him was at Radio Expo last September.

I am using a modulator circuit that I found on the web. An Exar function generator chip provides the modulation. I will probably go with a Twin T oscillator for the final product. I am using an AD9851 for the RF source. I had actually thought about some sort of loop antenna. The Wellbrook design looks pretty interesting. It appears to use a diff amp as the input stage for their RF amplifier, probably using some sort of CATV transistor for the final amp. If there is a good market for something like this amplifier, I could probably develop it. Last year, I did some experiments with a regenerative RF amplifier but ran into a brick wall trying to find those linear optoisolators. Maybe I will give that another try.
An interesting about receivers that use those 50 ohm Mini-Circuits doubly-balanced ring mixers.....you can connect an 8 foot diameter untuned loop directly to the antenna input of a receiver, closing the loop at the ground connection on the receiver. LW/MW performance is astonishing, even with no preamplification. As an example, I can tune to 524kHz and hear the Iowa City beacon up her in northeast Illinois.

I went over to my old buddys house today to get my freebie haircut.(he won't let me cut his hair though,I told him he should get his wife to cut his hair but he wont do it) He owns a very nice G.E.AM/FM/Shortwave floor model radio that belonged to his grandmother.The radio is in excellent condition as far as the wooden cabinet and all of the other exterior parts such as the dial and the knobs are concerned.I have known about the radio since back in the 1960's and the radio just sits on top of a bench shelf in his shed in his back yard and he said the radio works too.Of course the radio does have nostalgia value to him.Every once in a while I ask him about that radio.I have known him since 1954 and he said if he ever decides to sell that radio he will sell it to me.I was looking at the radio this afternoon,the Shortwave band scale on the dial ranges from 2.5 and on up to about 4.0 It is a beautifull old radio,it stands about waist high or higher.It dates back to the early 1940's or earlier.I might look around on the internet and see if I can find a picture of a radio that looks just like his radio.

I hadn't heard R. Tashkent in quite a while, but caught the tail end of their English broadcast just now on 11905 khz. Decent signal, but lots of QRN.

Steve

Still, no one mentions where the tubes come into play...
All the above could apply to my old drake R4...Except I
disagree about the absolute silence of the circuitry...
Nothing is absolutely quiet...
The front end (tracking preselector, RF amp, Mixer) of my
kenwood TS-830 is very good, and it has no tubes...
Are you telling me it would be better if I converted those
circuits to tubes? Sorry, I just don't buy it...
The R-390 is a great receiver because it was a *very* expensive,
carefully designed radio made for commercial/lab and gov use.
Not because it has tubes. I can list a whole slew of other
all tube models that are fairly pathetic in performance
compared to the collins.
Why didn't the use of tubes help those models?
MK

I don't know about the Palstar, but the Icom requires about an amp of
current while operating. That's quite a draw and could drain a gel cell in
a few hours. If you use this radio you'd probably want to use a deep cycle
marine battery or else two high-capacity gel cells with a charger.

Wow! I'd never even considered going there. I have a friend in the
Foreign Legion who was stationed there for awhile. He had nothing
good to say about it. Then again, he got stationed in Tahiti and
didn't like that either. He's a bit of a rough-cut, so it's probably
him and not Djibouti, LOL.

Nice that you put the QSL up. Someday, when I learn some more about
HTML and Web programming, maybe I'll try my hand at it. Networking
and sysasmin are more my thing, but it never hurts to diversify!

Closest I ever got to visiting was working in Cairo for 15 months.
What an experience *that* was!

Al

I use a deep cycle battery (size 27, 105 amp-hours) and that will run
the Icom R75 for about 50 hours before it wants to be charged again -
longer if needed though I don't like running it below half it's
capacity.

She was one of the most prolific writeres of the 20th century.
She intdroduced many of us to science ficiton. Between her
and Robert Heinlein they opened our eyes to a much wider
universe then we would otherwise known. Way too many
books to list. Even a partial list that would only include my
favorites would be too long.

My only complaint about Andre' Norton was her dislike of
technology and her undieing belief that most people are
good. Slightly too simple, but I still have over 50 of her
books.

I've been saying this for weeks, yet nobody has been listening. Nepal
was a warning shot over the bow of the BBC and every other shortwave

broadcaster (Voice of America, anyone?) who thinks that FM and the net
can replace shortwave. I figure that it will take a first world
country-such as the USA-doing what his majesty did in Nepal to make SW
broadcasters sit up and take notice. An Iraqi insurgent takeover of a
Sawa FM outlet might work, too.
>
> Also, I have never heard of a shortwave transmitter which could not
> take on further listeners because of network overloads.

The old bugaboo of the net-never enough bandwidth. As bandwidth expands,
so does content, like a goldfish that expands to fit its environment.
Now that people have broadband, they download whole movies. People
didn't do that with 14.4 modem connections and 80 MB hard drives. I
suppose if they invent a fatter internet pipe than broadband, people
will invent more and bigger content for it. Analog over the air radio
doesn't have this problem, obviously. All it will take is some 13 year
old hacker shutting down the internet for a while for people to realize
that the internet isn't reliable yet. Not to mention security, which is
a whole other post...
>
> 2) Once you go on the internet, you don't need BBCWS anymore - you
> might as well listen to Beeb domestic. For example, I rarely listen to

The BBC seems to think that it can put the BBCWS on just a handful of FM
outlets and have it survive. I really don't think so. Also, has it
occured to them that the decline in SW listeners has been a result of
them cutting out whole continents (NAm and Aus) from their services and
reducing transmissions to others?

Pete:
I have seen very linear opto-isolators in a end, custom made
AD converter. Sadly I couldn't get a diagram or even pop the
cover to study the magic. A Advark like USB audio capture
device that had the audio input completly isolated for hum/noise
control. It used 6 "D" cells that where supposed to run it for at
least a year. It was very clean, 24 bits. I hoped we would buy
several. Too pricy for our budget.

I will check around and see if any one remembers the make.

'3.. PETA funds the misnamed Physicians Committee for Responsible
Medicine'

'I don't have enough knowledge of the group to have an opinion. I bet
you
don't either'

actually, i do. they are a group of charlatan doctors giving out false health information re: vegetarianism & attempting to suppress any info that is contrary to their agenda.

you can be against the unnecessary suffering of animals & factory farms, yet not be a liar. pastured, unmedicated animals raised in marginal conditions for growing crops are GOOD for you to eat.

support local farmers. http://www.localharvest.org/

btw, a whole litter of field mice was killed when i tore up a manure pile to make compost (and my husband found a dead dog in a bale of hay! again for compost.) life is suffering, even for vegans wearing petroleum based footwear (obtaining THAT doesn't hurt the environment we all, inc animals, live in. nope, nope.) the jainists- i respect them, but man! that must be a pain in the ass, walking around constantly trying not to breathe in a gnat.

it's not realistic for most of us to live that way, & most of us (humanity) who CAN, choose to eat meat. if vegetarians spent half the energy they do trying to get us not to eat meat, trying to abolish cruel (and unhealthy for those of us on the other end of the food chain) agribusiness practices, there'd be a heluva lot less suffering. but suffering there will be, no matter what we do. welcome to the post-sin world.

A "NEW IN BOX " Sony 2010. Obviously, it was TAKEN OUT of the box for the photo. The seller states he bought it in 1999 and NEVER USED it. How do we know he didn't play with it for 6 years and just pull out the original box and packing for the photo?

I guess it just depends on how much you are willing to believe. I just see a lot of this on E-bay and become suspicious of the truth.

Some people are buying it. Currently the high bid is at $455.00 with 2-1/2 hours to go. Will be interesting to see the final bid.

It weighs about 50# - though it gets heavier the farther you have to carry it 8-} There are lighter models, a group 24 size is about 6 or 7 pounds lighter though they are typically about 20 amp-hours less capacity.

I'm always wary of those claims too. Why would someone buy an expensive radio and *never* use it?

At the same time, it does help when the seller provides many very clear, close up photos of the item, which this seller does. The seller may have used this 2010, but it does look to be in excellent shape.

Another story I often read and find it hard to believe is this: "I bought this (very expensive) receiver about six months ago, but I now realize that I just don't have time to use it." Wouldn't you buy an expensive receiver only if you were prepared to *make* time to use it? I would, but then maybe these people just have money to burn.

I own one.It is a big floor model AM/FM/Shortwave Grundig Radio and it has a Phonograph built in the top of it.I also own a big Telefunken AM/FM/Shortwave Radio too.The Grundig Radio dates back to around 1957 according to the owners manual and has a wooden cabinet,it sort of works but doesn't put out much audio.The Telefunken Radio,I don't know how old it it,I think it dates back to at least the 1960's or perhaps earlier,it also has a wooden cabinet and it is missing the tubes,the tubes were missing when I bought the Radio.I bought the Grundig Radio for $14.00 and the Telefunken Radio for $10.00 at a Goodwill thrift store.Neither of them are for sale or trade.I own many Shorwave Radios and most of my Shortwave Radios,I bought them at thrift stores.

Come on, cuhulin...you're fooling no one. We all figured out long ago that you're a Canadian posting as an American in order to make all of us -real- Americans look like ignorant hillbillies. You've simply overplayed your hand. It's time to quit.

Drats. Foiled again. Good thing most people have very short memories. I will continue to 'make' him post as normal. By tomorrow, NOBODY will remember this little hickup in my evil plan.

As a little side note, do you realize just how easy it was to make this persona so much more intelligent sounding than the Ace? The script virtually wrote itself.

www.dogpile.com www.vivisimo.com www.devilfinder.com
(Devilfinder,Send me to HELL!) Screw!!!! google,damn them google left
wing COMMIES!!!!!!! MSNTV One Plan.On the MSNTV One Plan,you can use
your computer and your MSNTV (webtv) service is free,Free,FREE and MSNTV
service cost $15.95 each month,they lowered the price.I don't use the
MSNTV One Plan though,I prefer to spend more money ($44.95 each month)
for Broad Band www.twcjam.com for my Velocity Micro,ProMagix
www.velocitymicro.com tower computer,it has a big window on the left
side of it.I read in a webtv news group today that some Broad Band
providers allow webtv connection too,on dial up for webtv,of course and
MSNTV knocks off $10.00 from the monthly service fee if you already have
an internet service provider.I have the best of both,my webtv AND my
computer.Now,please don't call me a liar.If y'all want proof,bet me some
money,lots of money,and come and see for yourself.

Liberty Net is on 3.958 LSB - ON RIGHT NOW - with over 20+ check in's!

[Sat 19 March 2005 10:00 PM Eastern 3.958 LSB]

Looks like it's going to be a looooong Net this evening.

Best to get a BIG BOWL of POPCORN, put an extra
log on the fire, and enjoy some real Americans talking
real issues on the Shortwave and Ham bands all night long!

TUNE IN FOLKS...THE NET IS RUNNING RIGHT NOW !!!!

No, it means new in box. One could assume it was unused...but merchandise
can be removed from the box, and still be classified as NIB.

Well said. Actually, the reason FM station (103 MHz) only shut off the Nepali language broadcast (1500-1530 UTC). World service was/is available 24 hours a day in Kathmandu. So was BBC TV on cable networks. Most common folks are rediscovering shortwave once again to listen to Nepali language broadcast from foreign stations. Streaming audio can be heard over Internet for those folks who have access to net.

But BBC does need to shut down some transmitters. Nothing more annoying than to tune the shortwave and when you think you found some exotic station, it turns out to be BEEB.

I just picked up a used one and should have it next week. I'm wondering how it performs compared to other "wide range" receivers (Icom, Yupiteru, Uniden). How good is the HF performance, especially for SSB utilities?

Yes it can work. It will work better with poor soil conductivity. That
would be the case for sandy soil.

Hydrogen production by windpower is very inefficient. It costs you WAY more in energy to make and transport it than you get out. Another thing..those Arabs aren't the ones forcing to you live beyond your energy means. Ever thought about reducing your power consumption? Can you get the wife to give up her SUV? Will you give up your Hummer?

The filters are pretty wide for shortwave. On AM, the filter is 12Khz. SIdeband is more reasonable (2.4Khz). It's a good scanner otherwise.

The VFO is quite programable in the sense that it can have both a step size and offset. Most scanners are such that if you set the step to say 0.1, then all the frequencies that the VFO would hit in a scan are evenly divisible by 0.1. With the AR3000A, you could introduce an offset, say .05, then make the scanner span for example 100.15, 100.25, 100.35, etc. The only time I found this to be handy was in scanning Airfone.

If you like milair or satcom, you will be happy.

To quote your response;
"If anything, PETA's is the true, absolutist moral stance..."

"If anything" I think the point of the post you are responding to was
that PETA has no moral standing.

"If anything" how in God's good name could you possibly entertain a
position of an animals supposed rights over a human beings? Only a
whack job would think this way.

well, in proceeding of 1994-1995, the author, David Clark said of the AUX-7:

"this highly desirable accessory allevates the need to use the cumbersome
"up/down" pushbuttons..."

he also expressed surprise at how many R7's were sold without it.

I guess it is people like you Mr. Lare that explain that lack of common
sense that he didn't understand.

by the way, you were mentioned in the article.

The problem with delivering something that appears to be a bit of test equipment, is you are competing with used test equipment. When it comes to test equipment, 20 year old HP wins over brand spanking new brand X every time. Most of the used gear I've bought over the years is still used in real labs. I could get it calibrated if I had the need. I have to think really hard if I ever bought any new test equipment.

If your box was digital through and through, then maybe you might get some sales. I'm not sure which Exar chip you are using (BTW, I used to work there), but the Twin-T is an analog topology and thus has all the bad features of analog as well as the good. It should be possible to make a completely digital AM or sideband modulator with a DSP chip and high speed DAC. The coordic is how the sine wave is computed, though at the time nobody really talked about it since there were still patents on coordic processors from the scientific calculator manufacturers. One of the best books I've seen on the subject was a masters or PHD thesis by a Stanford grad whose full name escapes me. First name Ahmend, which might as well be Joe or Bill nowadays.

A coordic is a lookup table technique that converges on the the sin and cos. You make a sine wave generator by accumulating phase, then taking the sin/cos of this phase value. If the phase accumulator were 8 bits, you would use a scale where 256 is one revolution. This way as you accumulate phase, the sine function automatically wraps around after reaching one revolution. You control the amplitude of the sine wave by the initial value of the coordic. It's really much easier than it sounds, at least the algorithm, Programming the DSP is another story.

I suspect the Wellbrook has a jfet amp because of the positive ground. I think today most CATV circuits are bipolar to simplify the biasing. For certain frequency ranges JFET has lower noise.You can parallel them up for lower noise. There are a few companies still serious about Jfets, but they are becoming less and less since the money is in high bandwidth.
http://www.calogic.com/ comes to mind as a jfet company

Another idea would be to make VHF/UHF amplifiers using SiGe.

Anytime Brian. There were a few folks who had this kind of project. Are you the one who was trying to do a frequency translation of I.F. output for a panadaptor that was designed for another intermediate frequency?

Pete

Thanks, I appreciate that!
I have some devices laying around that were used in the Boonton modulation meters, and I also have some that Krohn-Hite used in some of their audio oscillators. These were Wien Bridge designs that used these devices instead of the old light bulb in the feedback network. I guess I could do it with an FET. I do have a schematic for a regenerative preamplifier laying around, but I haven't put much effort into it. I also have a schematic for the Quantum Loop preamplifier, but I consider it the designer's intellectual property; henceforth, I need to come up with my own design as a matter of ethics.

3449. Radio Software Induced Madness

Newsgroup: rec.radio.shortwave
Date: 2005-03-20 05:38:18 UTC
From: "&#65533; Dr. Artaud &#65533;" <&#65533;NoSuchThing&#65533;@Notreal.com>
Message-ID: <Xns961F68025FE9TheDoctorisin@216.168.3.44>
Source record: 12981

They say that you can't lose somthing that you don't have, but I am living proof to the contrary.

I am losing my mind. It shouldn't take long, there isn't much of it.

I have a Yaesu FRG-100 and I downloaded free software for it, but it only works on the CAT interface. I don't have the cable.

I have the Icom R-75 and I downloaded shareware software for it that works with the serial interface on the radio (RX Plus), but it has expired. Nice stuff, I want to purchase, but the ability of the software to function is based on the "Register to" name for my computer, which is a long series of numbers, as I bought this laptop from Gateway. Not really a problem, unless I need to reload Windows and the "Registered to" name changes. Then the software won't work. I would be out $80.

I downloaded a freeware program for the Icom R-75, looks impressive, Ham Radio Deluxe, but it only works with the CAT interface. I don't have the cable.

I am looking for scanner software for my Uniden 785D, I found a nice site, looks like good software, I think that I tried the trialware version of it in the past. (When I had a different computer). The site says that it won't work with USB to Serial converters, that the computer must have a serial port, and I don't have one.

Why is there such difficulty in supporting USB to Serial converters? Why the fetish with the CAT interface on the Icom R-75 when it has a serial port?

Is there any reasonably priced software for the Icom R-75 and the Uniden 785D that would work with the Computer's USB to Serial interface and the Radio's serial ports?

Thanks.

Dr. Artaud

3450. the Fabulous Lowe HF-225E

The 225E is one of the most under rated receivers of all time.
In the 1994-1995 proceedings publication, Chuck Mitchell made an in depth review of the 225E

here are some of his findings in field tests against an R-5000, NRD-515 and R7:

The Lowe was first in audio reproduction
the Lowe beat the R5000 in dynamic range and tied the R7
weak signal performance was close to the 515
adjacent channel selectivity on the 5000 was inferior to the 225 regardless of filter selection
"I don't believe you will find a more selective and better sounding receiver in a rugged lightweight package"
the 225 produces some of the sweetest sound you will ever hear from a SW signal
superior tuning ease in ECSS mode and supurb audio quality when using the narrow 2.2 filter

the 225E was Jim Thorpes greatest work for Lowe (the 250 was not his work)
(no, the 150 is an inferior radio to the 225 E)
then came the 7030

the 225E beat the NRD-535 in the 1992 EDXC receiver of the year contest

I own an HF-225E (and they are HARD to acquire) and can vouch that it is an outstanding receiver.

The Signal Tracers I own are old and large.As large as some table model radios or larger.I bought them at a thrift store years ago and I also own some radio and tv tube testers.About twenty years ago,I read somewhere that most of those tube testers such as the kind we used to see in the stores,food stores,drug stores,hardware stores and the like,are not accurate so as to fool people into buying some new tubes.

Source record: 12986

Thanks for the input.....I wish I had some ability programming microcontrollers. I really need to learn how to work with at the very least, PICs. Anyway, this generator would sell for the under 150 dollar range, putting it a couple of steps above some of the offerings in this range.
I do like that HP equipment.....I had an 8650B for awhile and it was very good. I replaced it with a Boonton 103D and a Wavetek 2407. I've got an older spectrum analyzer (8558B with an 853 mainfraime). An older 8444 tracking generator allows me to measure the response of filters. I did build the N2PK Vector Network Analyzer last year, and it does serve me very well when it comes to doing sweeps of very narrow bandwidth filters. It is pretty nice, since I can look at the forward transfer function and the phase response at the same time. Using a directional coupler, I can view forward response and return loss at the same time.....I use this checking antenna resonance.
It would be nice to come up with a different audio oscillator for the modulation section. As long as I can keep the distortion fairly low, that would be ok. Let's see.....the Exar chip.....that would be an XR2206. I originally used this device for an FSK generator that I designed for a customer. They wanted to have something testing caller ID units. I also had some Burr-Brown 4523s these were a nice Quadrature function generator chip. I don't know what happenned to those.
So.....you worked for Exar. That must have been a pretty cool job.

I do have one design that uses a JFET as a source follower.....this
way, one can take advantage of the unloaded Q of the circuit. This is
followed by an RF Micro Devices RF2044. This device is a GaAs MMIC that has
20dB of gain with a NF of 4dB. Frequency range is from DC to 6GHz and linear
power output of this device is +17dBm. 1dB compression point is
+18.5dBm.

No such thing as a dumb question.....that is how we learn!
Anyway, Signal Generators, at least in the context of test equipment, are tunable RF sources that have modulation capabilities. If they are synthesized, they can be accurate enough sources for calibrating the tuning dials of receivers. They can also be used in conjunction with signal tracers by injecting the signal through the different stages of a system and using the signal tracer for tracing the path of that injected signal. A very useful technique for locating a defective stage in a receiver. And yes, signal generators are external pieces of test equipment.

I also use deep cycle batteries while on 12vdc-only DXpeditions, running an R-75, IC-756Pro, laptop computer, and various accessories.

My favorite bang-for-the-buck is Walmart's $54.98 deep cycle, which is 115 amp hours. I hate carrying them, even if it's just from my garage to my DXpedition van, but the results are worth it. The power just goes and goes before recharging is needed.

The trick with the Wellbrook loop is that the loop isn't tuned. Tuned loops make sense if your radio itself has poor filtering, but anyone who forked out money for a Wellbrook already has a decent radio. You have to admit the Wellbrook marketing is clever. They don't have to compete with Kiwa, Quantum, etc.

In a good amplifier, you set (or blow) the noise figure at the input stage. [You can do worse of course if you aren't careful.] Thus starting with a source follower means you are inserting a noise source right that the front end. Since noise is "input referred", starting with a source follower (i.e. no gain) means that you don't have the gain of the transistor to reduce the noise. Thus you should start with a gain stage. Now this is where I don't know what Wellbrook does. For low noise, you want a single ended input stage (one less elemen to contribute to the noise). For the loop to work, it has to float about ground as you don't want the antenna to be the loop relative to ground, i.e. you want the loop to be the antenna. Thus Wellbrook puts in a differential to single ended converter, aka the transformer. Now what I don't know is the turns ratio of the transformer. Are they picking the turns ratio fo impedance matching? Is the goal voltage gain?

I don't think the Wellbrook is complicated in terms of the number of components, but it requires good planning to make a low noise amp that works with the loop.

You may want to investigate North Hills transformers. They often show up at swap meets or on ebay. They are very wide band.

3468. Good old Dogpile Search Engine

Newsgroup: rec.radio.shortwave

I did a good old dogpile search for,General Electric Tube Type Radios
But I didn't see a picture of that radio,,, yet.I did see a thumbnail
picture of a Grundig Majestic Radio though.I hit my back button to get
to it but then I screwed up and clicked on that stupid rubylane website
and it froze my webtv box up,first time that has happened in years.I had
to unplug (unpluging a webtv box doesn't hurt anything like it would a
computer though,all it does is reset it,if fact,it is good to reset it
once in a while) my webtv box and plug it back in to get back
online,less than one minute later,I was back online.I might look for
that picture again later on.I am fixin to get my beauty sleep now.Them
folks next door are out there hollering at the top of their lungs at
somebody about something and all of the dogs on my street and the next
street over are voiceing their complaints about being woken up at this
time of night.I keep my little doggy in my house away from those damn
fools out there.Chuck Norris is playing the big hero dude in the
movie,Missing in Action 2.I wonder what he would do in real life?

3469. Problem with tuning knob on Lowe HF 150.

Newsgroup: rec.radio.shortwave
Date: 2005-03-20 09:33:50 UTC
From: Lars Brandt <lov.brandt@comhem.se>
Message-ID: <2sb%d.132902$dP1.471053@newsc.telia.net>
Source record: 13001

Hi ,
Is there anybody have experince of a Lowe HF-150? On mine there is a
"crunchy sound" from the speaker when you turn the tuning knob.
It has been so from the beginning.When I have my fingertips on the upper
part of the case the crunchy sound reduces.
Is this phenomen normal for the HF-150 or it should be quite when you turn
the tuning knob?
Shall the tuning knob be connect to earth?
Thankful for all help
Lars

>Why didn't the use of tubes help those models?
>MK

Dynamic range. Overload immunity. ....

Because of tubes? I dunno...All of my radios have
good enough dynamic range, and none overload...Tube,
or solid state...That doesn't tell me too much...
Only cheaper radios have poor dynamic range, and
overload...:/
But, we ain't talking about R-390's. We are talking
about tubes themselves vs solid state..
I'm still waiting to hear why the use of tubes
didn't help some radios to avoid being pieces of junk...
If tubes themselves are so great, *all* tube radios
should be about on the level of a R-390. But they ain't...
Not by a long shot. The old collins/R390's, etc, etc,
and the collins A and S amateur line, and the older 4 line
drakes are about the only tube radios that I still consider
worth using. All the rest are basically junk, for
my needs. I'm sure this will attract flames 0-plenty,
but I'm picky. I demand *very* good stability.
The collins and drakes basically used the same type
of circuitry. A collins or drake is just as stable
at 30 mc as it is at 3 mc. And the readout scale is
the same also..You can't say that for many other
old tube rigs. I can think of a few that are best
used as doorstops...Unstable at higher freq's,
and drifty as a Chicago snowstorm. :(
Both my kenwood and icoms can be turned on dead cold,
and never need to be retuned to clarify a SSB signal.
Ever. I can sit on freq for weeks at a time,
and never have to touch up my tuning..."Sure, they
may microdrift with temp changes, but it's never enough
to notice by ear" Most tube rigs can't do that.
I know my drakes can't. They can come close, but after
about a day, you will usually need to touch up the
tuning a tad. I don't know how a R-390 fares
in this regard, but if it's *rock* stable, it's the tube
exception to the rule. And if it is, it's probably cuz
it has a xtal oven, etc...Not cuz it uses tubes...
I won't mention that most of my tube gear needed annual
alignment tweaks and tube checks/changes to keep 100%
up to par.
My solid state rigs never change...Don't have to be fussed

with every few months, if you leave them on all the time
like I did/do. I still like tube radios, and still have a few,
but I'm not blind to reality...There are not many tube radios
that are up to R-390 standards. Tubes look warm, and may add
slightly to the BTU rating of the heating system in the
winter, but they ain't the magic answer to SW-MW nirvana...
Heck, I hardly use mine anymore..Overall, I find them inferior
for *everyday* use. IE: readout resolution, stability, tuning
rates, memories, heck , I could go for days...
The R-390 is a great radio, but not all tube radios can
claim to be R-390's.....Quite possibly none can. The collins
and drake ham radios are fairly close though. But neither of
those were cheap radios when they were built either.

> About what...this time?

Oh apparently about the person who made the initial silly "Maryanne Kehoe died" post, suing for "financial damages", etc....like any attorney would waste time pursuing some dumb anonymous post using an e-mail anonymizer based in Italy or Australia or wherever...yeah Johnny Cochran is going to get RIGHT on that, LOL...

In any case contacting the police would be the first option if a person truly felt "threatened" but in this case they'd laugh and then hang up the phone...cops (and attorneys) have better things to do than deal with phony "internet" complaints and the lonely pathetic cranks who make them. However that does not prevent some from making royal pest of themselves over nonsensical non - issues...

[AFAIK there has been only one case of successful prosecution against a Usenet poster (AOL) and this was after years of the defendant harrassing and abusing another poster with real and verifiable threats...]

The "I am going to contact my attorney..." shtick ranks right up there with "Do you know who I am?" in the "Useless Threats" category...

Some folx just have too much time on their hands...or lead very active fantasy lives I guess :-)

It shouldn't happen so long as you're listening at normal volume
levels, though the user's manual does state that you can expect some
vibration to occur if you turn the volume up high.

The solution is to get a decent external speaker. You ought to use an
external speaker anyway. Only an external speaker will do justice to
the high quality audio produced by the 150.

Heres a little song you guys might like that I wrote about the subject:

Hummers ah hummers, It's good to be alive!
Hummers ah hummers, It's good to be alive!
Hummers ah hummers, It's good to be alive!
Boy I'll miss hummers, when I die!

B.H.

I also thought it was interesting that they seem to be keeping track of "page impressions" (which I take to be 'hits) on their website. You can have a whole lot of hits without anyone actually bothering to read anything! Consequently, getting lots of hits does *not* mean you're getting your message out.

Steve

I think you answered your own questions, several times over.

FYI, a well maintained aligned R390A in a stable environment can be tuned within 300 Hz of a target frequency and will drift less than half that figure over 24 hours.

There ain't a $10 transistor made with the dynamic range of a tube designed for small signal RF amplification.
